Understanding Deradicalization DIANE Publishing

With recent changes in social and political landscapes around the world the focus of preventive counter-terrorism has shifted in many places from government to civil society. The contributors analyze the different

approaches of Civil Society Organizations in preventing and countering violent extremism in various countries in South and Southeast Asia. The cases examined include, Malaysia, Indonesia, Myanmar, Sri Lanka and Bangladesh. The key emphasis is on understanding the context within which each example was initiated, and the factors that determined their relative success or failure. The evidence from these cases suggests that much can be achieved through empowering communities to engage in aiding both the indoctrinated and those who pose the greatest risk of radicalization. A valuable contribution to the literature on preventing

and countering violent extremism.

Pre-Incident Indicators of Terrorist Incidents Routledge

In compiling this annotated bibliography on the psychology of terrorism, the author has defined terrorism as "acts of violence intentionally perpetrated on civilian noncombatants with the goal of furthering some ideological, religious or political objective." The principal focus is on nonstate actors. The task was to identify and analyze the scientific and professional social science literature pertaining to the psychological and/or

behavioral dimensions of terrorist behavior (not on victimization or effects). The objectives were to explore what questions pertaining to terrorist groups and behavior had been asked by social science researchers; to identify the main findings from that research; and attempt to distill and summarize them within a framework of operationally relevant questions. To identify the relevant social science literature, the author began by searching a series of major academic databases using a systematic, iterative keyword strategy, mapping, where possible, onto existing subject headings. The focus was on locating professional social science literature published in major books or in peer-reviewed journals. Searches were conducted of the following databases October 2003:

To address the potential terrorist threats to America, the National Security Strategy of the United States of America and the National Strategy for Combating Terrorism state that the United States will wage a "war of ideas."

The war of ideas seeks to change the minds of varying ideological populations. A war fought in the minds and among people—human terrain—requires human players to engage and communicate with indigenous populations in the context of the local culture. As the United States and its coalition partners in the global war on terror (GWOT) clear al-Qaeda from one location, terrorists will seek other locations. They target people to turn them against the United States and the coalition of the willing. A foreign or local government can win the war of ideas and defeat global terrorists only if it wins the hearts and minds of

the people, which requires influencing their behavior by offering them a better solution than the solution al-Qaeda offers. A war of ideas is not new to the twenty-first century fight. While history cannot provide a panacea for global terrorism, today's military can learn lessons from historical small wars and low intensity conflicts to train and employ forces effectively to wage and win a war of ideas to counter global insurgents and their ability to win popular support. This paper employs a review of two case studies, Malaya (1945 – 60) and Vietnam (1964 – 72), to

illuminate the author's thesis.

Terror Operations: Case Studies in Terrorism, Handbook No. 1.01 Butterworth-

Heinemann

This book offers a detailed and practically oriented guide to the challenges of conducting terrorist fieldwork. The past decade has seen an explosion of research into terrorism.

However, field research on terrorism has traditionally been surrounded by many myths, and has been called anything from "necessary" and "crucial" to "dangerous", "unethical" and "impossible". While there is an increasing interest among terrorism specialists in conducting such research, there is no single volume providing prospective

field researchers with a guideline to such work. *Conducting Terrorism Field Research* aims to fill this gap and offers a collection of articles from experienced authors representing different risk groups, disciplines, methodological approaches, regional specializations, and other context-specific aspects. Each contributor provides a road-map to their own research, describing planning and preparation phases, the formalities involved in getting into conflict zones and gaining access to sources. The end product is a 'how to' guide to field research on terrorism, which will be of much
