A boost pedal is one of the most useful pedals one can have. Simply put, it boosts the signal that goes into it. It can perk up a low output guitar, or bring out more character or a different quality to your amp. This is especially useful for solos where overdrive or distortion would overwhelm the tone you've got.

The recommended setting for turning on an acoustic guitar is "1," the minimum setting. The acoustic amp will play little, if any, of the guitar signal through the speaker. The volume is then increased to the desired setting after it is turned on.

The reason it is started so low is to avoid feedback. Feedback occurs when the sound produced by an amp is fed back into the amp through a microphone or pickup.
