Focusing on the key challenges that still impede the realization of the billion-ton renewable fuels vision, this book integrates technological development and business development rationales to highlight the key technological developments that are necessary to industrialize biofuels on a global scale. Technological issues addressed in this work include fermentation and downstream processing technologies, as compared to current industrial practice and process economics. Business issues that provide the lens through which the technological review is performed span the entire biofuel value chain, from financial mechanisms to fund biotechnology start-ups in the biofuel arena up to large green field manufacturing projects, to raw material farming, collection and transport to the bioconversion plant, manufacturing, product recovery, storage, and transport to the point of sale. Emphasis has been placed throughout the book on providing a global view that takes into account the intrinsic characteristics of various biofuels markets from Brazil, the EU, the US, or Japan, to emerging economies as agricultural development and biofuel development appear undissociably linked.

From process definition... to software deployment... This unique book is the first to provide a comprehensive method for implementing and maintaining business processes that help IT professionals and software engineers improve software quality, reduce time-to-market, quickly respond to changes in requirements, and more precisely specify the reuse of software components. The business process implementation approach detailed here utilizes the industry's hottest concepts, including meta data repositories, scenarios, roles, business rules, data modeling, component reuse, and workflow. The book also introduces an innovative method of analyzing a process map that strengthens process specification from both business and technical perspectives. Throughout the book, particular attention is paid to the need for close coordination between human activity and automated systems.

Lucy Nash has just finished up her sophomore year of high school and is anticipating an uneventful summer at her rural Georgia home. . . that is, until a weird twist of fate and physics takes her on a trip back through time to the year 1975 with Cameron Hall, a boy her age whose own time is thirty years into her future. Cameron is hoping to stop a series of child disappearances, one of which deeply affected his family, and ends up teaming up with his accidental "passenger" to solve the crime. But despite their access to resources from the future, can two teenagers resolve a mystery that has remained a cold case for over sixty years. . . and what impact will their presence in the past have on their

own lives - and their own futures?

Riding motorcycles is fun, but author Ken Condon maintains that there is a state of consciousness to be achieved beyond the simple pleasure of riding down the road. Riding in the Zone helps riders find that state of being. It's the experience of being physically and mentally present in the moment, where every sense is sharply attuned to the ride. Your mind becomes silent to the chatter of daily life, and everyday problems seem to dissolve. You feel a deeper appreciation for life. Your body responds to this state of being with precise, fluid movements, you feel in balance, your muscles are relaxed, and it seems as though every input you make is an expression of mastery. This is "the Zone." Condon identifies all of the factors that affect entering the Zone and addresses each one individually, from the development of awareness and mental skills to mastering physical control of the motorcycle. At the end of each chapter are drills designed to transform the book's ideas into solid, practical riding skills. Riding in the Zone takes riders to the next level in their skill set.

Process industries have a particularly urgent need for collaborative equipment management systems, but until now have lacked for programs directed toward their specific needs. TPM in Process Industries brings together top consultants from the Japan Institute of Plant Maintenance to modify the original TPM Development Program. In this volume, they demonstrate how to analyze process environments and equipment issues including process loss structure and calculation, autonomous maintenance, equipment and process improvement, and quality maintenance. For all organizations managing large equipment, facing low operator/machine ratios, or implementing extensive improvement, this text is an invaluable resource.

Top-Down Technicals, Macro Trading, not only builds upon the growing contributions by Arun S. Chopra, CFA, CMT to the world of market research and analysis, it outlines his process, displays his past successes, and highlights the advanced nature of his firm's work. It's a taught and highly informative discussion of the yen that also serves as the starting point for his forthcoming market observation book series. Inside Top-Down Technicals, Macro Trading, The Yen 2012, financial professionals and enthusiasts will find a detailed explanation of how they can take real-time market information to confirm macro-based trading and investment ideas. Chopra combines past editions of his monthly publication, "The Tape," with a closer look at an entire macro setup in order to create a high-level view of a macroeconomic, top-down technical cycle. The end result aids readers in expanding upon simple, long-term trading levels, and introduces new concepts of how assets trade relative to one another based on macroeconomic principles. His discussion of these long-term charts and macroeconomic relationships, as well as intermarket analysis, shows readers how to optimize the strategies and timeliness of their setups. The result: not only will you better understand Chopra's methodologies, you will also gain practical insight into the potential power of a setup on its related markets.

This paper discusses commodity prices might serve as a useful leading indicator of inflation, based on the relative importance of flexible auction markets for the determination of these prices. They thus may have a tendency to respond relatively quickly, especially in response to monetary disturbances. Estimation of alternative commodity-price indexes, in which the weights are chosen so as to minimize the residual variance in aggregate inflation regressions, was not fully successful. The commodity prices do have a useful role to play as an aid in predicting inflation, so long as one is careful to interpret the relationships qualitatively and in the context of more general macroeconomic developments. The ratio of consumer to commodity price movements' changes over time, and the relative price of commodities undergoes long sustained swings; nonetheless, the qualitative linkages are quite evident in the data. Perhaps most importantly, turning points in commodity-price inflation frequently precede turning points in consumer-price inflation for the large industrial countries as a group.

Design Antennas for Modern Wireless Communications Systems

Written by a global team of expert contributors, this book offers complete details on the wide range of antennas used in today's wireless communication networks. Coverage includes the most popular applications in WWAN (GSM, CDMA, and WCDMA), WLAN (Bluetooth and WiFi), WMAN (WiMAX), and WPAN (UWB and RFID). Antennas for Base Stations in Wireless Communications presents a full picture of modern base station antenna technology--from fundamentals and parameters to engineering and advanced solutions--and highlights new technologies in antenna design with enhanced performance. Real-world case studies provide you with practical examples that can be applied to your own system designs. Apply measurement techniques for various parameters Enable frequency re-use and channel capacity optimization in mobile radio networks Design antennas for mobile communications-CDMA, GSM, and WCDMA Implement advanced antenna technologies for GSM base stations Facilitate enhanced system capacity Design unidirectional antennas, including directed dipole, wideband patch, and complementary antennas Optimize antenna designs for WLAN (WiFi) applications Design antennas for Wireless Personal Area Network (WPAN) applications, including RFID and UWB
