Reciprocity in the third millennium HarperCollins Publishers

There are few movements more firmly associated with civil disobedience than the Civil Rights Movement. In the mainstream imagination, civil rights activists eschewed coercion, appealed to the majority's principles, and submitted willingly to legal punishment in order to demand necessary legislative reforms and facilitate the realization of core constitutional and democratic principles. Their fidelity to the spirit of the law, commitment to civility, and allegiance to American democracy set the normative standard for liberal philosophies of civil disobedience. This narrative offers the civil disobedience of the Civil Rights Movement as a moral exemplar: a blueprint for activists who seek transformative change and racial justice within the bounds of democracy. Yet in this book, Erin R. Pineda shows how it more often functions as a disciplining example--a means of scolding activists and quieting dissent. As Pineda argues, the familiar account of Civil Rights disobedience not only misremembers history; it also distorts our political judgments about how civil disobedience might fit into democratic politics. Seeing Like an Activist charts the emergence of this influential account of civil disobedience in the Civil Rights Movement, and demonstrates its reliance on a narrative about black protest that is itself entangled with white supremacy. Liberal political theorists whose work informed decades of scholarship saw civil disobedience like a white state: taking for granted the legitimacy of the constitutional order, assuming as primary the ends of constitutional integrity and stability, centering the white citizen as the normative ideal, and figuring the problem of racial injustice as limited, exceptional, and all-but-already solved. Instead, this book sees civil disobedience from the perspective of an activist, showing the consequences for ideas about how civil disobedience ought to unfold in the present. Building on historical and archival evidence, Pineda shows how civil rights activists, in concert with anticolonial movements across the globe, turned to civil disobedience as a practice of decolonization in order to emancipate themselves and others, and in the process transform the racial order. Pineda recovers this powerful alternative account by adopting a different theoretical approach--one which sees activists as themselves engaged in the creative work of political theorizing.

This book calls for the conditions of transition to sustainability: How to take into consideration new global phenomena such as and of the dimension of climate change, the depletion of natural resources, financial crises, demographic dynamics, global urbanization, migrations and mobility, while bearing in mind short-term or local place-based issues, such as social justice or quality of life? Meeting this challenge requires an inclusive approach of sustainability. It is a matter of designing a new social contract: Sustainability requires more than developing the right markets, institutions and metrics, it requires social momentum. To do so, many issues need a clear and complete answer: How to link social justice with sustainability policies? What governance tools to do so? What linkage between one decision-making level and the other? These are major issues to design sound transitions to sustainability.

The first textbook to teach students how to build data analytic solutions on large data sets using cloud-based technologies. This is the first textbook to teach students how to build data analytic solutions on large data sets (specifically in Internet of Things applications) using cloud-based technologies for data storage, transmission and mashup, and AI techniques to analyze this data. This textbook is designed to train college students to master modern cloud computing systems in operating principles, architecture design, machine learning algorithms, programming models and software tools for big data mining, analytics, and cognitive applications. The book will be suitable for use in one-semester computer science or electrical engineering courses on cloud computing, machine learning, cloud programming, cognitive computing, or big data science. The book will also be very useful as a reference for professionals who want to work in cloud computing and data science. Cloud and Cognitive Computing begins with two introductory chapters on fundamentals of cloud computing, data science, and adaptive computing that lay the foundation for the rest of the book. Subsequent chapters cover topics including cloud architecture, mashup services, virtual machines, Docker containers, mobile clouds, IoT and AI, inter-cloud mashups, and cloud performance and benchmarks, with a focus on Google's Brain Project, DeepMind, and X-Lab programs, IBKai HwangM SyNapse, Bluemix programs, cognitive initiatives, and neurocomputers. The book then covers machine learning algorithms and cloud programming software tools and application development, applying the tools in machine learning, social media, deep learning, and cognitive applications. All cloud systems are illustrated with big data and cognitive application examples.

Urban transport systems worldwide are faced by a multitude of challenges. Among the most visible of these are the traffic gridlocks experienced on city roads and highways all over the world. The prescribed solution to transport problems in most cities has thus been to build more infrastructures for cars, with a limited number of cities improving public transport systems in a sustainable manner. However, a number of challenges faced by urban transport systems – such as greenhouse gas emissions, noise and air pollution and road traffic accidents – do not necessarily get solved by the construction of new infrastructure. *Planning and Design for Sustainable Urban Mobility* argues that the development of sustainable urban transport systems requires a conceptual leap. The purpose of 'transportation' and 'mobility' is to gain access to destinations, activities, services and goods. Thus, access is the ultimate objective of transportation. As a result, urban planning and design should focus on how to bring people and places together, by creating cities that focus on accessibility, rather than simply increasing the length of urban transport infrastructure or increasing the movement of people or goods. Urban form and the functionality of the city are therefore a major focus of this report, which highlights the importance of integrated land-use and transport planning. This new report of the United Nations Human Settlements Programme (UN-Habitat), the world's leading authority on urban issues, provides some thought-provoking insights and policy recommendations on how to plan and design sustainable urban mobility systems. The *Global Report on Human Settlements* is the most authoritative and up-to-date global assessment of human settlements conditions and trends. Preceding issues of the report have addressed such topics as *Cities in a Globalizing World*, *The Challenge of Slums*, *Financing Urban Shelter*, *Enhancing Urban Safety and Security*, *Planning Sustainable Cities* and *Cities and Climate Change*.

A fundamental approach to the structure of the economic evolution, the impact on geopolitics and the role of new social rules. What does a house, digital data and social connections have in common? They all are asset classes of a physical-digital economic space. What does a village marketplace, YouTube and a blockchain have in common? They all are resource allocation mechanisms. What does trust and geography have in common? Both will be fundamentally transformed by the digital revolution. Book II builds on the twin concepts of "reciprocity" and "social contracts" discussed in Book I and introduces a new game analogy to better understand the impact of digitalization on our incumbent systems. For example, who will be the new "players" of this post-modern socio-economic game? How will new reciprocity mechanisms impact geopolitics and social rules? Can a new game generate sustainable systemic behaviors over the medium-term? Book II identifies a profound paradigm shift that will enable the emergence of a fourth family of reciprocity mechanism. This will result in a novel and complementary resource allocation process that should gradually help us address some of our major social and environmental challenges at the start of the third millennium. In this second volume, Derek Queisser de Stockalper helps us understand the rapid evolution of our economic systems and its impact on our modern political and social structures. *EXTRAIT* Societies have evolved from simple

hunter-gatherer community structures tens of millennia ago to gradually more complex structured Societies millennia ago. With a growing number of individuals competing for limited resources, it became imperative for communities sharing common values and culture to organise themselves more formally to address their social and economic agents' basic physiological needs and craving for physical security. As we have seen in Chapter IV of Book I, various resource allocation processes – based either on gift, balanced or negative reciprocity – developed over the ages to address the resource allocation needs of communities. As a result, or sometimes in parallel, various political structures and Social Contracts emerged to define and organise the living rules of these nascent Societies. Interestingly, the German Sociologist Georg Simmel notes that the simple formalization of a common reciprocal mechanism, such as a common negative reciprocity currency, is enough to justify a shift from ad-hoc or anarchy-like community dynamics to formalized rules-based Society dynamics.<sup>10</sup> With time, emerging political and economic rules were formalized within explicit or implicit Social Contracts that eventually led to modern political structures such as the Nation-State. ABOUT THE AUTHOR Derek Queisser de Stockalper is the founder of Queisser & Cie / Qanalytics, a Swiss-based strategic and investment advisory boutique addressing the investment needs of sophisticated capital owners in a low yield environment. The only comprehensive book on geriatric occupational therapy designed specifically for the COTA, Occupational Therapy with Elders: Strategies for the COTA, 3rd Edition provides in-depth coverage of each aspect of geriatric practice, from wellness and prevention to death and dying. A discussion of foundational concepts includes aging trends and strategies for elder care, and coverage of emerging areas includes low-vision rehabilitation, mobility issues including driving, and Alzheimer's disease and other forms of dementia. Expert authors René Padilla, Sue Byers-Connon, and Helene Lohman offer an unmatched discussion of diverse populations and the latest on geriatric policies and procedures in this fast-growing area of practice. Unique! A focus on the occupational therapy assistant highlights the importance of COTAs to the care of elder clients. Case studies illustrate principles and help you apply what you've learned to actual situations. Key terms, chapter objectives, and review questions highlight important content in each chapter. Use of the term "elder" reduces the stereotypical role of dependent patients and helps to dispel myths about aging. A multidisciplinary approach demonstrates how the OT and the COTA can collaborate effectively. Unique! Attention to diverse populations and cultures prepares you to respect and care for clients of different backgrounds. Unique! The companion Evolve website makes review easier with more learning activities, references linked to MEDLINE abstracts, and links to related OT sites. Unique! A discussion of elder abuse, battered women, and literacy includes information on how the COTA can address these often-overlooked issues. New information on alternative treatment settings for elders reflects new trends in OT care. Updated information on Medicare, Medicaid, and HIPAA regulations discusses the latest policies and how to incorporate the newest procedures into practice. Significant additions are made to the chapters on public policy, dementia, and oncology.

The rise and fall of iCue: lessons about new media, old media, and education from an NBC-MIT joint venture into interactive learning. In 2006, young people were flocking to MySpace, discovering the joys of watching videos of cute animals on YouTube, and playing online games. Not many of them were watching network news on television; they got most of their information online. So when NBC and MIT launched iCue, an interactive learning venture that combined social networking, online video, and gaming in one multimedia educational site, it was perfectly in tune with the times. iCue was a surefire way for NBC to reach younger viewers and for MIT to test innovative educational methods in the real world. But iCue was a failure: it never developed an audience and was canceled as if it were a sitcom with bad ratings. In *The More We Know*, Eric Klopfer and Jason Haas, both part of the MIT development team, describe the rise and fall of iCue and what it can teach us about new media, old media, education, and the challenges of innovating in educational media. Klopfer and Haas show that iCue was hampered by, among other things, an educational establishment focused on "teaching to the test," television producers uncomfortable with participatory media, and confusion about the market. But this is not just a cautionary tale; sometimes more can be learned from an interesting failure than a string of successes. Today's educational technology visionaries (iPads for everyone!) might keep this lesson in mind.
