Planning and Design for Sustainable Urban Mobility Elsevier Health Sciences

This book calls for the conditions of transition to sustainability: How to take into consideration new global phenomena such as and of the dimension of climate change, the depletion of natural resources, financial crises, demographic dynamics, global urbanization, migrations and mobility, while bearing in mind short-term or local place-based issues, such as social justice or quality of life? Meeting this challenge requires an inclusive approach of sustainability. It is a matter of designing a new social contract: Sustainability requires more than developing the right markets, institutions and metrics, it requires social momentum. To do so, many issues need a clear and complete answer: How to link social justice with sustainability policies? What governance tools to do so? What linkage between one decision-making level and the other? These are major issues to design sound transitions to sustainability.

A fundamental approach to the structure of the economic evolution, the impact on geopolitics and the role of new social rules. What does a house, digital data and social connections have in common? They all are asset classes of a physical-digital economic space. What does a village marketplace, YouTube and a blockchain have in common? They all are resource allocation mechanisms. What does trust and geography have in common? Both will be fundamentally transformed by the digital revolution. Book II builds on the twin concepts of "reciprocity" and "social contracts" discussed in Book I and introduces a new game analogy to better understand the impact of digitalization on our incumbent

systems. For example, who will be the new "players" of this post-modern socio-economic game? How will new reciprocity mechanisms impact geopolitics and social rules? Can a new game generate sustainable systemic behaviors over the medium-term? Book II identifies a profound paradigm shift that will enable the emergence of a fourth family of reciprocity mechanism. This will result in a novel and complementary resource allocation process that should gradually help us address some of our major social and environmental challenges at the start of the third millennium. In this second volume, Derek Queisser de Stockalper helps us understand the rapid evolution of our economic systems and its impact on our modern political and social structures. EXTRAIT Societies have evolved from simple hunter-gatherer community structures tens of millennia ago to gradually more complex structured Societies millennia ago. With a growing number of individuals competing for limited resources, it became imperative for communities sharing common values and culture to organise themselves more formally to address their social and economic agents' basic physiological needs and craving for physical security. As we have seen in Chapter IV of Book I, various resource allocation processes - based either on gift, balanced or negative

reciprocity - developed over the ages to address the resource allocation needs of communities. As a result, or sometimes in parallel, various political structures and Social Contracts emerged to define and organise the living rules of these nascent Societies. Interestingly, the German Sociologist Georg Simmel notes that the simple formalization of a common reciprocal mechanism, such as a common negative reciprocity currency, is enough to justify a shift from ad-hoc or anarchy-like community dynamics to formalized rules-based Society dynamics.¹⁰ With time, emerging political and economic rules were formalized within explicit or implicit Social Contracts that eventually led to modern political structures such as the Nation-State. ABOUT THE AUTHOR Derek Queisser de Stockalper is the founder of Queisser & Cie / Qanalytics, a Swiss-based strategic and investment advisory boutique addressing the investment needs of sophisticated capital owners in a low yield environment. He graduated from St Andrews University (Scotland) with an MA in Logic & Metaphysics and International Relations and received an MBA in Economics and Finance from Columbia Business School (NYC). He has collaborated over the past 25 years with various organizations such as J. Henry Schroder & Co, Credit Suisse Financial Products, the Lloyds Banking Group, Firmenich, P&G, DNDi, ESA, IUCN, the UN, the World Bank, as well as with major foundations and family offices in the fields of impact finance, sustainability, conservancy, health infrastructures, education and youth. In parallel to his professional activities, he is developing novel FinTech solutions to facilitate the emergence of a more balanced and inclusive

financial system. Derek Queisser de Stockalper lives in Geneva, is married and has two sons.

The only comprehensive book on geriatric occupational therapy designed specifically for the COTA, Occupational Therapy with Elders: Strategies for the COTA, 3rd Edition provides in-depth

coverage of each aspect of geriatric practice, from wellness and prevention to death and dying. A discussion of foundational concepts includes aging trends and strategies for elder care, and coverage of emerging areas includes low-vision rehabilitation, mobility issues including driving, and Alzheimer's disease and other forms of dementia. Expert authors René Padilla, Sue Byers-Connon, and Helene Lohman offer an unmatched discussion of diverse populations and the latest on geriatric policies and procedures in this fast-growing area of practice. Unique! A focus on the occupational therapy assistant highlights the importance of COTAs to the care of elder clients. Case studies illustrate principles and help you apply what you've learned to actual situations. Key terms, chapter objectives, and review questions highlight important content in each chapter. Use of the term "elder" reduces the stereotypical role of dependent patients and helps to dispel myths about aging. A multidisciplinary approach demonstrates how the OT and the COTA can collaborate effectively. Unique! Attention to diverse populations and cultures prepares you to respect and care for clients of different backgrounds. Unique! The companion Evolve website makes review easier with more learning activities, references linked to MEDLINE abstracts, and links to related OT sites. Unique! A discussion of elder abuse, battered women, and literacy includes information on how the COTA can address these often-overlooked issues. New information on alternative treatment settings for elders reflects new trends in OT care. Updated information on Medicare, Medicaid, and HIPAA regulations discusses the latest policies and how to incorporate the newest procedures into practice. Significant additions are made to the chapters on public policy, dementia, and oncology.

Navigating Our Way reflects the broader insights and diverse voices revolutionizing marine conservation. This volume brings together an array of scholars, practitioners, and experts from multiple fields, creating a network of trans-disciplinary and multi-cultural perspectives to address the complex problems in marine conservation. Larry B. Crowder, a leading voice in the field, has curated contributions on a wide range of topics, including critically endangered species in the Bahamas, Argentinian penguins, and the ecosystems of our coral reefs. The book delves deeply into human relationships with nature, the development of climate-smart solutions, and the governance of collective action. Committed to inclusivity, this volume also includes conversations across the disciplines of natural sciences, social sciences, and governance, incorporating both Western and Indigenous knowledge traditions. This volume is highly

relevant to marine conservation scholars, practitioners, managers, and students, and anyone interested in preserving our marine environment.

There are few movements more firmly associated with civil disobedience than the Civil Rights Movement. In the mainstream imagination, civil rights activists eschewed coercion, appealed to the majority's principles, and submitted willingly to legal punishment in order to demand necessary legislative reforms and facilitate the realization of core constitutional and democratic principles. Their fidelity to the spirit of the law, commitment to civility, and allegiance to American democracy set the normative standard for liberal philosophies of civil disobedience. This narrative offers the civil disobedience of the Civil Rights Movement as a moral exemplar: a blueprint for activists who seek transformative change and racial justice within the bounds of democracy. Yet in this book, Erin R. Pineda shows how it more often functions as a disciplining example--a means of scolding activists and quieting dissent. As Pineda argues, the familiar account of Civil Rights disobedience not only misremembers history; it also distorts our political judgments about how civil disobedience might fit into democratic politics. Seeing Like an Activist charts the emergence of this influential account of civil disobedience in the Civil Rights Movement, and demonstrates its reliance on a narrative about black protest that is itself entangled with white supremacy. Liberal political theorists whose work informed decades of scholarship saw civil disobedience like a white state: taking for granted the legitimacy of the constitutional order, assuming as primary the ends of constitutional integrity and stability, centering the white citizen as the normative ideal, and figuring the problem of racial injustice as limited, exceptional, and all-but-already solved. Instead, this book sees civil disobedience from the perspective of an activist, showing the consequences for ideas about how civil disobedience ought to unfold in the present. Building on historical and archival evidence, Pineda shows how civil rights activists, in concert with anticolonial movements across the globe, turned to civil disobedience as a practice of decolonization in order to emancipate themselves and others, and in the process transform the racial order. Pineda recovers this powerful alternative account by adopting a different theoretical approach--one which

sees activists as themselves engaged in the creative work of political theorizing.

Urban transport systems worldwide are faced by a multitude of challenges. Among the most visible of these are the traffic gridlocks experienced on city roads and highways all over the world. The prescribed solution to transport problems in most cities has thus been to build more infrastructures for cars, with a limited number of cities improving public transport systems in a sustainable manner.

However, a number of challenges faced by urban transport systems -- such as greenhouse gas emissions, noise and air pollution and road traffic accidents -- do not necessarily get solved by the construction of new infrastructure. Planning and Design for Sustainable Urban Mobility argues that the development of sustainable urban transport systems requires a conceptual leap. The purpose of 'transportation' and 'mobility' is to gain access to destinations, activities, services and goods. Thus, access is the ultimate objective of transportation. As a result, urban planning and design should focus on how to bring people and places together, by creating cities that focus on accessibility, rather than simply increasing the length of urban transport infrastructure or increasing the movement of people or goods. Urban form and the functionality of the city are therefore a major focus of this report, which highlights the importance of integrated land-use and transport planning. This new report of the United Nations Human Settlements Programme (UN-Habitat), the world's leading authority on urban issues, provides some thought-provoking insights and policy recommendations on how to plan and design sustainable urban mobility systems. The Global Report on Human Settlements is the most authoritative and up-to-date global assessment of human settlements conditions and trends. Preceding issues of the report have addressed such topics as Cities in a Globalizing World, The Challenge of Slums, Financing Urban Shelter, Enhancing Urban Safety and Security, Planning Sustainable Cities and Cities and Climate Change.

Where many textbooks on policy research focus on methodological and statistical theories, leaving students to wonder how they will apply those theories to future policy positions, this innovative textbook takes theories of policy research and puts them into practice, demystifying the subject by translating it into real-world situations in which students can actively engage. Beginning with an orientation and overview of policy research, outlining the processes of policy analysis and evaluation from start to finish, Applied Policy Research, 2e walks students through an examination of case studies to demonstrate how these theories play out in real policy situations. New to this edition: A rewritten Part I that includes several new chapters incorporating the latest developments in applicable policy research design, implementation, and products to provide a framework for conducting policy research. A matrix at the start of Part II to easily identify how each of the fifteen case-study chapters correspond with concepts and topics presented in Part I, showing the reader where to look for a specific real-life example of a given topic or concept. Each case is drawn from real instances of policy research to provide students with an opportunity to consider and learn how to grapple with the challenges posed by the needs of public programs and agencies. Cases include local, state, and nonprofit agencies as well as federal-state-local intergovernmental "hybrids." Each chapter is presented in a uniform format: (1) a detailed description of a policy research problem; (2) a discussion of the unique challenges posed by the problem; (3) a description of the policy research techniques used; (4) a summary of the outcomes or conclusions associated with the research as it was conducted; and (5) conclusions about the implications or lessons for policy research. Illustrative figures help students understand the stages of policy research, and end-of-chapter tools such as discussion questions, assignments and activities, and case studies "at a glance" help students master not only the particulars of each case but the broader skills needed in

future research. Applied Policy Research, Second Edition will be essential reading in all policy research courses with a focus on practical outcomes and student preparation for public service.

The 1982 statistics on the use of family planning and infertility services presented in this report are preliminary results from Cycle III of the National Survey of Family Growth (NSFG), conducted by the National Center for Health Statistics. Data were collected through personal interviews with a multistage area probability sample of 7969 women aged 15-44. A detailed series of questions was asked to obtain relatively complete estimates of the extent and type of family planning services received. Statistics on family planning services are limited to women who were able to conceive 3 years before the interview date. Overall, 79% of currently married nonsterile women reported using some type of family planning service during the previous 3 years. There were no statistically significant differences between white (79%), black (75%) or Hispanic (77%) wives, or between the 2 income groups. The 1982 survey questions were more comprehensive than those of earlier cycles of the survey. The annual rate of visits for family planning services in 1982 was 1077 visits /1000 women. Teenagers had the highest annual visit rate (1581/1000) of any age group for all sources of family planning services combined. Visit rates declined sharply with age from 1447 at ages 15-24 to 479 at ages 35-44. Similar declines with age also were found in the visit rates for white and black women separately. Nevertheless, the annual visit rate for black women (1334/1000) was significantly higher than that for white women (1033). The highest overall visit rate was for black women 15-19 years of age (1867/1000). Nearly 2/3 of all family planning visits were to private medical sources. Teenagers of all races had higher family planning service visit rates to clinics than to private medical sources, as did black women age 15-24. White women age 20 and older had higher

visit rates to private medical services than to clinics. Never married women had higher visit rates to clinics than currently or formerly married women. Data were also collected in 1982 on use of medical services for infertility by women who had difficulty in conceiving or carrying a pregnancy to term. About 1 million ever married women had 1 or more infertility visits in the 12 months before the interview. During the 3 years before interview, about 1.9 million women had infertility visits. For all ever married women, as well as for white and black women separately, infertility services were more likely to be secured from private medical sources than from clinics. The survey design, reliability of the estimates and the terms used are explained in the technical notes.
