What if there were a way to cut through all the financial mumbo-jumbo? Wouldn't it be great if someone could really explain to us-in plain and simple English-the basics we must know about investing in order to insure our financial freedom? At last, here's good news. Jargon-free and written for all investors-experienced, beginner, and everyone in between-The Investment Answer distills the process into just five decisions-five straightforward choices that can lead to safe and sound ways to manage your money. When Wall Street veteran Gordon Murray told his good friend and financial advisor, Dan Goldie, that he had only six months to live, Dan responded, "Do you want to write that book you've always wanted to do?" The result is this eminently valuable primer which can be read and understood in one sitting, and has advice that benefits you, not Wall Street and the rest of the traditional financial services industry. The Investment Answer asks readers to make five basic but key decisions to stack the investment odds in their favor. The advice is simple, easy-to-follow, and effective, and can lead to a more profitable portfolio for every investor. Specifically: Should I invest on my own or seek help from an investment professional? How should I allocate my investments among stocks, bonds, and cash? Which specific asset classes within these broad categories should I include in my portfolio? Should I take an actively managed approach to investing, or follow a passive alternative? When should I sell assets and when should I buy more? In a world of fast-talking traders who believe that they can game the system and a market characterized by instability, this extraordinary and timely book offers guidance every investor should have.

In modern computing a program is usually distributed among several processes. The fundamental challenge when developing reliable and secure distributed programs is to support the cooperation of processes required to execute a common task, even when some of these processes fail. Failures may range from crashes to adversarial attacks by malicious processes. Cachin, Guerraoui, and Rodrigues present an introductory description of fundamental distributed programming abstractions together with algorithms to implement them in distributed systems, where processes are subject to crashes and malicious attacks. The authors follow an incremental approach by first introducing basic abstractions in simple distributed environments, before moving to more sophisticated abstractions and more challenging environments. Each core chapter is devoted to one topic, covering reliable broadcast, shared memory, consensus, and extensions of consensus. For every topic, many exercises and their solutions enhance the understanding This book represents the second edition of "Introduction to Reliable Distributed Programming". Its scope has been extended to include security against malicious actions by non-cooperating processes. This important domain has become widely known under the name "Byzantine fault-tolerance".

Where many textbooks on policy research focus on methodological and statistical theories, leaving students to wonder how they will apply those theories to future policy positions, this innovative textbook takes theories of policy research and puts them into practice, demystifying the subject by translating it into real-world situations in which students can actively engage. Beginning with an orientation and overview of policy research, outlining the processes of policy analysis and evaluation from start to finish, *Applied Policy Research, 2e* walks students through an examination of case studies

to demonstrate how these theories play out in real policy situations. New to this edition: A rewritten Part I that includes several new chapters incorporating the latest developments in applicable policy research design, implementation, and products to provide a framework for conducting policy research. A matrix at the start of Part II to easily identify how each of the fifteen case-study chapters correspond with concepts and topics presented in Part I, showing the reader where to look for a specific real-life example of a given topic or concept. Each case is drawn from real instances of policy research to provide students with an opportunity to consider and learn how to grapple with the challenges posed by the needs of public programs and agencies. Cases include local, state, and nonprofit agencies as well as federal-state-local intergovernmental "hybrids." Each chapter is presented in a uniform format: (1) a detailed description of a policy research problem; (2) a discussion of the unique challenges posed by the problem; (3) a description of the policy research techniques used; (4) a summary of the outcomes or conclusions associated with the research as it was conducted; and (5) conclusions about the implications or lessons for policy research. Illustrative figures help students understand the stages of policy research, and end-of-chapter tools such as discussion questions, assignments and activities, and case studies "at a glance" help students master not only the particulars of each case but the broader skills needed in future research. *Applied Policy Research, Second Edition* will be essential reading in all policy research courses with a focus on practical outcomes and student preparation for public service.

What drives a young London librarian to board a ship to India, meditate in a remote cave by herself for twelve years, and then build a flourishing nunnery in the Himalayas? How does a surfer girl from Malibu become the head of the main international organization for Buddhist women? Why does the daughter of a music executive in Santa Monica dream so vividly of peacocks one night that she chases these images to Nepal, where she finds the love of her life in an

unconventional young Tibetan master? The women featured in Dakini Power—contemporary teachers of Tibetan Buddhism, both Asians and Westerners, who teach in the West—have been universally recognized as accomplished practitioners and brilliant teachers whose life stories demonstrate their immense determination and bravery. Meeting them in this book, readers will be inspired to let go of old fears, explore new paths, and lead the lives they envision. Featured here are: • Jetsun Khandro Rinpoche (This Precious Life) • Dagmola Sakya (Princess in the Land of Snows) • Jetsun Tenzin Palmo (Diane Perry) (Into the Heart of Life) • Pema Chödrön (Deirdre Blomfield-Brown) (When Things Fall Apart; Start Where You Are) • Khandro Tsering Chödrön (most familiar to readers as the late aunt of Sogyal Rinpoche, author of The Tibetan Book of Living and Dying) • Thubten Chodron (Cherry Greene) (Buddhism for Beginners; Taming the Mind) • Karma Lekshe Tsomo (Patricia Zenn) (Buddhism Through American Women's Eyes) • Chagdud Khadro (Jane Dedman) (P'howa Commentary; Life in Relation to Death) • Sangye Khandro (Nanci Gay Gustafson) (Meditation, Transformation, and Dream Yoga) • Roshi Joan Halifax (Being with Dying) • Lama Tsultrim Allione (Joan Rousmanière Ewing) (Women of Wisdom; Feeding Your Demons) • Elizabeth Mattis-Namgyel (The Power of an Open Question)

Explores computer-intensive probability and statistics for ecosystem management decision making Simulation is an accessible way to explain probability and stochastic model behavior to beginners. This book introduces probability and statistics to future and practicing ecosystem managers by providing a comprehensive treatment of these two areas. The author presents a self-contained introduction for individuals involved in monitoring, assessing, and managing ecosystems and features intuitive, simulation-based explanations of probabilistic and statistical concepts. Mathematical programming details are provided for estimating ecosystem model parameters with Minimum Distance, a robust and computer-intensive method. The majority of examples illustrate how probability and statistics can be applied to ecosystem management challenges. There are over 50 exercises – making this book suitable for a lecture course in a natural resource and/or wildlife management department, or as the main

text in a program of self-study. Key features: Reviews different approaches to wildlife and ecosystem management and inference. Uses simulation as an accessible way to explain probability and stochastic model behavior to beginners. Covers material from basic probability through to hierarchical Bayesian models and spatial/ spatio-temporal statistical inference. Provides detailed instructions for using R, along with complete R programs to recreate the output of the many examples presented. Provides an introduction to Geographic Information Systems (GIS) along with examples from Quantum GIS, a free GIS software package. A companion website featuring all R code and data used throughout the book. Solutions to all exercises are presented along with an online intelligent tutoring system that supports readers who are using the book for self-study. Mastering Cloud Computing B&H Publishing Group

The best decisions made by public managers are based not on instinct, but on an informed understanding of what 's happening on the ground. Policy may be directed by ideology, but it must also be founded on reality. The challenge of making the right decisions as a public manager is often, therefore, based on the need for rigorous, actionable research. Now in a thoughtfully revised second edition, this textbook shows students of Public Administration exactly how to use both qualitative and quantitative research techniques to give them the best chance to make the right decisions. Uniquely, Eller, Gerber, and Robinson present research methodologies through a series of real-life case studies, with each chapter exploring situations where a public manager can use research to answer specific questions, demonstrating how that research can inform future policy. Taking readers through the key concepts, from research design and sampling to interviews, survey data, and more statistical-based approaches, this new edition provides a complete guide to using research in the public and voluntary sectors. New to this edition: To better orient the student, the second edition is thematically arranged. Five sections, each with a short essay, provide not only previews of the content of each section, but more importantly guide the reader through how the concepts and techniques covered relate to real-world use and application. A new chapter on applied quantitative analyses has been added to offer coverage of several commonly-used and valuable analytic techniques for decision making for policy and management: benefit-cost analysis, risk assessment, and forecasting. The second edition is accompanied by online materials containing suggested course plans and sample syllabi, PowerPoint lecture slides, and student support materials to illustrate the application of

key concepts and analytic techniques. Each chapter also includes discussion questions, class exercises, end of chapter review questions, and key vocabulary to provide students with a range of further tools to apply research principles to practical situations.

Ben Marcus returns with a collection of timely dystopian visions of alienation in a modern world. Here a hapless, corporate drone finds love after being disfigured from testing his employer ' s newest nutrition supplement; a father starts to suspect that his son ' s precocity has turned sinister; and two architects in a failing marriage must consider the ethics of artificially inciting emotion as they construct a memorial to a terrorist attack. It ' s these characters and others that over the course of thirteen short stories showcase Marcus ' s compassion, imagination, and mordant humor. Never has existential catastrophe been so much fun.

The only comprehensive book on geriatric occupational therapy designed specifically for the COTA, Occupational Therapy with Elders: Strategies for the COTA, 3rd Edition provides in-depth coverage of each aspect of geriatric practice, from wellness and prevention to death and dying. A discussion of foundational concepts includes aging trends and strategies for elder care, and coverage of emerging areas includes low-vision rehabilitation, mobility issues including driving, and Alzheimer's disease and other forms of dementia. Expert authors Ren é Padilla, Sue Byers-Connon, and Helene Lohman offer an unmatched discussion of diverse populations and the latest on geriatric policies and procedures in this fast-growing area of practice. Unique! A focus on the occupational therapy assistant highlights the importance of COTAs to the care of elder clients. Case studies illustrate principles and help you apply what you've learned to actual situations. Key terms, chapter objectives, and

review questions highlight important content in each chapter. Use of the term "elder" reduces the stereotypical role of dependent patients and helps to dispel myths about aging. A multidisciplinary approach demonstrates how the OT and the COTA can collaborate effectively. Unique! Attention to diverse populations and cultures prepares you to respect and care for clients of different backgrounds. Unique! The companion Evolve website makes review easier with more learning activities, references linked to MEDLINE abstracts, and links to related OT sites. Unique! A discussion of elder abuse, battered women, and literacy includes information on how the COTA can address these often-overlooked issues. New information on alternative treatment settings for elders reflects new trends in OT care. Updated information on Medicare, Medicaid, and HIPAA regulations discusses the latest policies and how to incorporate the newest procedures into practice. Significant additions are made to the chapters on public policy, dementia, and oncology.

The New York Times Bestseller "A superb introduction to the world and global issues. Richard Haass has written something that is brief, readable, and yet comprehensive—marked throughout by his trademark intelligence and common sense." —Fareed Zakaria An invaluable primer from Richard Haass, president of the Council on Foreign Relations, that will help anyone, expert and non-expert alike, navigate a time in which many of our biggest challenges come from the world beyond our borders. We live in a global era, in which what happens thousands of miles away often affects our lives. Although the United States is bordered by two oceans, those oceans are not moats. And the so-called Vegas rule—what happens there stays there—does not apply. Globalization can be both good and bad, but it is not something that individuals or countries can opt out of. The choice we face is how to respond. The World focuses on history, what makes each region of the world tick, the many challenges globalization presents, and the most influential countries, events, and ideas, to provide readers with the background they need to make sense of this complicated and interconnected world.

Gain the pharmacology knowledge and skills you need to administer medications safely! Pharmacology and the Nursing Process, 10th Edition provides practical, easy-to-use pharmacology information, emphasizing the application of the nursing process and prioritization throughout the book. Coverage begins with pharmacology basics, then discusses drugs by body systems and drug functions. Hundreds of full-color illustrations show how drugs work in the body and depict key steps in medication administration. Written by pharmacology experts Linda Lane Lilley, Shelly Rainforth Collins, and Julie S. Snyder, this bestselling textbook makes it easy to understand and apply pharmacology concepts and provide safe, quality nursing care. Focus on need-to-know information includes discussions of what nurses may encounter during drug

administration in a variety of health care settings, providing accounts of real-life medication errors and tips for avoiding those errors. The Nursing Process is applied to each category of drugs, ensuring that you administer medications accurately and safely, and includes the steps of assessment, human need statements, planning, implementation, and evaluation. Emphasis on drug classes describes key similarities and differences among the drugs in each class, making it easier to understand how individual drugs work in the body. Consistent presentation for each drug group includes the mechanism of action, indications, contraindications, adverse effects, interactions, and dosages, concluding with drug profiles of individual drugs in the class or group. High-alert icons identify medications that pose a greater risk to patient safety. Focus on prioritization includes prioritized nursing diagnoses along with a corresponding prioritization of goals and outcomes, to help you learn to connect nursing diagnoses with goals and outcomes. Ease of readability makes difficult content more understandable. Photo atlas features more than 100 drawings and photographs showing drug administration techniques. Dosages tables summarize generic and trade names, pharmacologic class, normal dosage ranges, and indications for the drugs. Learning features at the beginning of each chapter include objectives and key terms, and at the end of each chapter, key points, critical thinking questions, review questions, and a list of resources available on the Evolve website. QSEN coverage includes the use of human need theory with human need statements, case studies featuring collaboration and teamwork content, Preventing Medication Errors boxes, and a discussion of the QSEN initiative as it relates to the safety and quality of patient care. NEW! Updated drug content reflects the latest FDA drug approvals, withdrawals, and therapeutic uses, and includes updated nursing content. The World Houghton Mifflin Harcourt Religion

This beautiful and practical guide to ukeireru, the Japanese principle of acceptance, offers a path to well-being and satisfaction for the anxious and exhausted. Looking for greater peace and satisfaction? Look no further than the Japanese concept of ukeireru, or acceptance. Psychologist Scott Haas offers an elegant, practical, and life-changing look at ways we can reduce anxiety and stress and increase overall well-being. By learning and practicing ukeireru, you can: Profoundly improve your relationships, with a greater focus on listening, finding commonalities, and intuiting Find calm in ritualizing things such as making coffee, drinking tea, and even having a cocktail Embrace the importance of baths and naps Show respect for self and others, which has a remarkably calming effect on everyone Learn to listen more than you talk Tidy up your life by downsizing experiences and relationships that offer more stress than solace Cultivate practical ways of dealing with anger, fear, and arguments -- the daily tensions that take up so much of our lives By practicing acceptance, we learn to pause, take in the situation, and then deciding on a course of action that reframes things. A must read for anyone who believes that God has a higher purpose for your life, and you long to break free from the status quo to be used by Him in a greater way. The good news is that God has faith in you. He is not calling you based on your past track record, your education, or what side of town you live on. None of these things are what qualifies you. God is only looking for your availability. Are you willing to be used by Him to powerfully impact others who are hurting and to bring positive change to the challenges faced within your community? The Bible is clear that God promises to be with us to accomplish any task He sets before us, even if it is in the hard places. In this book you will discover Biblical keys, and practical steps, to

raise your sights for living every day with the Greater One on the inside of you. In our communities crime is rampant, drug addiction epidemic, homelessness continues to rise, and poverty and unemployment abound. Traditionally our prayers have been focused on bringing these needs to God and asking what He will do about them. But what if He wants to use you as part of His answer? Every day God intends your work to become your worship and for you to embrace your neighborhood as your mission. This book will affirm your calling into the marketplace where you can show others the love of God. It will provide you with the encouragement to step out. Third Series A political history of environmental policy and regulation in California, from the Gold Rush to the present Over the course of its 150-year history, California has successfully protected its scenic wilderness areas, restricted coastal oil drilling, regulated automobile emissions, preserved coastal access, improved energy efficiency, and, most recently, addressed global climate change. How has this state, more than any other, enacted so many innovative and stringent environmental regulations over such a long period of time? The first comprehensive look at California's history of environmental leadership, California Greenin' shows why the Golden State has been at the forefront in setting new environmental standards, often leading the rest of the nation. From the establishment of Yosemite, America's first protected wilderness, and the prohibition of dumping gold-mining debris in the nineteenth century to sweeping climate- change legislation in the twenty-first, David Vogel traces California's remarkable environmental policy trajectory. He explains that this pathbreaking role developed because California had more to lose from environmental deterioration and more to gain from preserving its stunning natural geography. As a result, citizens and civic groups effectively mobilized to protect and restore their state's natural beauty and, importantly, were often backed both by business interests and by strong regulatory authorities. Business support

for environmental regulation in California reveals that strict standards are not only compatible with economic growth but can also contribute to it. Vogel also examines areas where California has fallen short, particularly in water management and the state's dependence on automobile transportation. As environmental policy debates continue to grow more heated, California Greenin' demonstrates that the Golden State's impressive record of environmental accomplishments holds lessons not just for the country but for the world.

Grantwriters often have little or no training in the practical task of grantseeking. Many feel intimidated by the act of writing, and some don't enjoy writing. In Storytelling for Grantseekers, Second Edition, Cheryl Clarke presents an organic approach to grantseeking, one that views the process through the lens of the pleasures and rewards of crafting a good story. Grantseekers who approach the process as one in which they are connecting with an audience (grantmakers) and writing a narrative (complete with settings, characters, antagonists and resolutions) find greater success with funders. The writing process becomes a rewarding way to tell the organization's tale, rather than a chore, and their passion and creativity lead to winning proposals. This book walks readers

through all the main phases of the proposal, highlighting the creative elements that link components to each other and unify the entire proposal. The book contains resources on crafting an effective synopsis, overcoming grantwriter's block, packaging the story, and the best ways to approach the "short stories" (inquiry and cover letters) that support the larger proposal. Clarke also stresses the need to see proposal-writing as part of a larger grantseeking effort, one that emphasizes preparation, working with the entire development staff, and maintaining good relations with funders. In *Storytelling for Grantseekers*, new and experienced grantseekers alike will discover how to write and support successful proposals with humor and passion. New edition features: Overall updates as well as both refreshed and new examples Workshop exercises for using the storytelling approach New chapters on the application of the storytelling method to other fundraising communications like appeal letters and case statements, as well as the importance of site visits Example of a full narrative proposal Catalog of Copyright Entries. Now, with *Eat to Win for Permanent Fat Loss*, he shows you not only how to lose weight and dramatically improve your performance in all areas of life, but

also how to keep the fat off--forever. Based on cutting-edge research on how and why our bodies use carbohydrates, proteins, and fats, Haas created a "Mediterrasian" diet that combines the best and healthiest aspects of diets from the regions where people live the longest. His approach features a ratio of 50 percent carbohydrates, which includes grains, fruits, and vegetables; 25 percent protein; and 25 percent fat. Haas also provides the specific reasons why this is the ultimate ratio for maximum energy, fitness, and permanent fat loss. *Eat to Win for Permanent Fat Loss* offers a remarkably flexible, healthy food plan that encourages both the use of the new "functional" foods, such as tofu hot dogs and soy-chicken nuggets, and treats that most diet plans forbid entirely, such as chocolate, wine, and coffee. In fact, Haas tells you why enjoying chocolate and coffee every day could actually make you healthier, providing both satisfaction and valuable phytonutrients that prevent illness. It's the kind of eating plan that works for the entire family. As for exercise, Haas's recommendation is just as simple: Burn a minimum of 300 calories--the equivalent of 45 minutes of walking--throughout the day, through any activity you choose. Haas' s combined diet and exercise program changes lives. *Storytelling for Grantseekers* Vintage *Mastering Cloud Computing* is designed for undergraduate students learning to develop cloud computing applications. Tomorrow's applications won' t live on a single computer but will be deployed from and reside on a virtual server, accessible anywhere, any time. Tomorrow's application developers need to understand the requirements of building apps for these virtual systems, including concurrent programming, high-performance computing, and data-intensive systems. The book introduces the principles of distributed and parallel computing underlying cloud architectures and specifically focuses on virtualization, thread programming, task programming, and map-reduce programming. There are examples demonstrating all of these and more, with exercises and labs throughout. Explains how to make design

choices and tradeoffs to consider when building applications to run in a virtual cloud environment Real-world case studies include scientific, business, and energy-efficiency considerations
