Genetic programming
(GP) is a
systematic, domain-
independent method
for getting
computers to solve
problems
automatically
starting from a
high-level
statement of what
needs to be done.
Using ideas from
natural evolution,
GP starts from an
ooze of random
computer programs,
and progressively
refines them
through processes
of mutation and
sexual
recombination,
until high-fitness
solutions emerge.
All this without

the user having to know or specify the form or structure of solutions in advance. GP has generated a plethora of human-competitive results and applications, including novel scientific discoveries and patentable inventions. This unique overview of this exciting technique is written by three of the most active scientists in GP. See www.gp-field-guide.org.uk for more information on the book.

PID Control for
Industrial Processes
presents a clear, multidimensional representation of proportional - integral - derivative (PID) control for both students and specialists working in the area of PID control. It mainly focuses on the theory and application of PID control in industrial processes. It incorporates recent developments in PID control technology in industrial practice. Emphasis has been given to finding the best possible approach to develop a simple and optimal solution for industrial users. This book includes several chapters that cover a broad range of topics and priority has been

given to subjects that cover real-world examples and case studies. The book is focused on approaches for controller tuning, i.e., method bases on open-loop plant tests and closed-loop experiments.

Lessons on authentic leadership from the 58th annual Antarctic expedition In Leading on the Edge, successful business speaker and consultant Rachael Robertson shares the lessons she learned as leader of a year-long expedition to the wilds of Antarctica. Leading

eighteen strangers around the clock for a full year—through months of darkness and with no escape from the frigid cold, howling winds, and each other—Robertson learned powerful lessons about what real, authentic leadership is. Here, she offers a deeply honest and humorous account of what it takes to survive and lead in the harshest environment on Earth. What emerges from her graphic account is a series of powerful and practical lessons for business leaders and
