Praise for *Overloaded and Underprepared* "Parents, teachers, and administrators are all concerned that America's kids are stressed out, checked out, or both—but many have no idea where to begin when it comes to solving the problem. That's why the

work of *Challenge Success* is so urgent. It has created a model for creating change in our schools that is based on research and solid foundational principles like communication, creativity, and compassion. If your community wants to build better schools and a brighter future, this book is the place to start." —Daniel H. Pink, author of *Drive* and *A Whole New Mind* "Challenge Success synthesizes the research on effective school practices and offers concrete tools and strategies that educators and parents can use immediately to make a difference in their communities. By focusing on the day-to-day necessities of a healthy schedule; an engaging, personalized, and rigorous curriculum; and a caring climate, this book is an invaluable resource for school leaders, teachers, parents, and students to help them design learning communities where every student feels a sense of belonging, purpose, and motivation to learn the skills necessary to succeed now and in the future." —Linda Darling-Hammond, Charles E. Ducommun Professor of Education, Stanford University "Finally, a book about education and student well-being that is both research-based and eminently readable. With all the worry about student stress and academic engagement, Pope, Brown and Miles gently remind us that there is much we already know about how to create better schools and healthier kids. Citing evidence-based 'best practices' gleaned from years of work with schools across the country, they show us what is not working, but more importantly, what we need to do to fix things. Filled with practical suggestions and exercises that can be implemented easily, as well as advice on how to approach long-term change, *Overloaded and Underprepared* is a clear and compelling roadmap for teachers, school administrators and parents who believe that we owe our children a better education." —Madeline Levine, co-founder *Challenge Success*; author of *The Price of Privilege* and *Teach Your Children Well* "This new book from the leaders behind

*Challenge Success* provides a thorough and balanced exploration of the structural challenges facing students, parents, educators, and administrators in our primary and secondary schools today. The authors' unique approach of sharing proven strategies that enable students to thrive, while recognizing that the most effective solutions are tailored on a school-by-school basis, makes for a valuable handbook for anyone seeking to better understand the many complex dimensions at work in a successful learning environment." —John J. DeGioia, President of Georgetown University

This book contains peer-reviewed papers presented at the 10th International Conference on Energy Efficiency in Domestic Appliances and Lighting (EEDAL'19), held in Jinan, China from 6-8 November 2019. Energy efficiency helps to mitigate CO2 emissions and at the same time increases the security of energy supply. Energy efficiency is recognized as the cleanest, quickest and cheapest energy source. Not only this, but energy efficiency brings several additional benefits for society and end-users, such as lower energy costs, reduced local pollution, better outdoor and indoor air quality, etc. However, in some sectors, such as the residential sector, barriers to investments in energy efficiency remain. Legislation adopted in several jurisdictions (EU, Japan, USA, China, India, Australia, Brazil, etc.) helps in removing barriers and fosters investments in energy efficiency. These initiatives complement innovative financing schemes for energy efficiency, the provision of energy services by energy service companies and different types of information programs. At the same time,

progress in appliance technologies and in solid state lighting offer high levels of efficiency. LED lighting is an example. As with previous conferences in this series, EEDAL '19 provided a unique forum to discuss and debate the latest developments in energy and environmental impact of households, including appliances, lighting, heating and cooling equipment, electronics, smart meters, consumer behavior, and policies and programs. EEDAL addressed non-technical issues such as consumer behavior, energy access in developing countries, and demand response.

In a unique epistolary style, authors Murray Stein and Elena Caramazza share their rich and reflective conversations surrounding the themes of temporality, shame, and evil through letters, essays, and email correspondence. Ignited by Wolfgang Pauli's "The Piano Lesson," Stein and Caramazza study the function of temporality and consider the importance of shame and evil to this relationship. In this book Stein shows how Pauli, as a result of his contact with C.G. Jung and analytical psychology, embarked on a thought experiment to merge two currents of scientific thought: quantum physics and depth psychology. In his work of active imagination "The Piano Lesson," Pauli playfully brings together the former, which supplies a causal explanation of the mechanics of the material world, and the latter, which supplies an approach to meaning. The problem of how to merge the two currents in one language is presented in Pauli's symbolic solution, piano music, which combines the black and white keys in a single harmony. This music symbolizes a unified theory that combines the explanations of causality and the meaning delivered by synchronicity. Presenting an original approach to synchronicity and dis-synchronicity, this interdisciplinary and innovative exchange concludes with a script written by Murray Stein, inspired by Pauli, as well as an afterword by influential Jungian scholars. This book will be a key reference for undergraduate and postgraduate courses and seminars in Jungian and post-Jungian studies, philosophy, psychoanalytic studies, psychology, and the social sciences.

Manufacturing's central role in global innovation Companies compete on the decisions they make. For years—even decades—in response to intensifying global competition, companies decided to outsource their manufacturing operations in order to reduce costs. But we are now seeing the alarming long-term effect of those choices:

in many cases, once manufacturing capabilities go away, so does much of the ability to innovate and compete. Manufacturing, it turns out, really matters in an innovation-driven economy. In *Producing Prosperity*, Harvard Business School professors Gary Pisano and Willy Shih show the disastrous consequences of years of poor sourcing decisions and underinvestment in manufacturing capabilities. They reveal how today's undervalued manufacturing operations often hold the seeds of tomorrow's innovative new products, arguing that companies must reinvest in new product and process development in the US industrial sector. Only by reviving this "industrial commons" can the world's largest economy build the expertise and manufacturing muscle to regain competitive advantage. America needs a manufacturing renaissance—for restoring itself, and for the global economy as a whole. This will require major changes. Pisano and Shih show how company-level choices are key to the sustained success of industries and economies, and they provide business leaders with a framework for understanding the links between manufacturing and innovation that will enable them to make better outsourcing decisions. They also detail how government must change its support of basic and applied scientific research, and promote collaboration between business and academia. For executives, policymakers, academics, and innovators alike, *Producing Prosperity* provides the clearest and most compelling account yet of how the American economy lost its competitive edge—and how to get it back.

*Tiny House Design & Construction Guide* Haynes Publishing

"I began building tiny houses back in 2009 when I built one for my mom. The house she was living in was starting to fall apart and become unlivable, so I knew I had to find her alternative housing. After researching various options I discovered the tiny house movement and realized that it was the perfect solution for her. A tiny house could be constructed to very high standards and still be affordable, plus it can be easily moved"--Author

*Practical Methods for Analysis and Design of HV Installation Grounding Systems* gives readers a basic understanding of the modeling characteristics of the major components of a complex grounding system. One by one, the author develops and analyzes each component as a standalone element, but then puts them together, considering their mutual disposition, or so-called proximity effect. This is the first book to enable the making and analysis of the most complex grounding systems that are typical for HV substations located in urban areas that uses relatively simple mathematical operations instead of modern computers. Since the presented methods enable problem-solving for more complex issues than the ones solved using National, IEC and/or IEEE standards, this book can be considered as an appendix to these standards. Develops general equations of lumped parameter ladder circuits Includes the analytical expression for

determination of ground fault current distribution for a fault anywhere along a cable line Presents measurement and analytical methods for the determination of actual ground fault current distribution for high-voltage substations located in urban areas Provides the analytical procedure for the determination of the critical ground fault position for faults appearing in outgoing transmission lines Defines testing procedure for the correct evaluation of grounding systems of substations located in urban areas

*Hydrogen Power: An Introduction to Hydrogen Energy and its Applications* explains how hydrogen is produced, used, and handled and shows that the use of chemical hydrogen power has enormous advantages as an energy storage, transport, and use medium. Organized into seven chapters, this book first describes the chemical and physical properties of hydrogen. Subsequent chapters elucidate the current industrial uses of hydrogen, methods of producing hydrogen, and hydrogen transportation and storage. Hydrogen safety and environmental considerations are also addressed.

"Georgia Pritchett is a singularly hilarious person. Her book is a delightful and perfect reflection of her. Its tenderness sneaks up on you and really packs a punch. What a magnificent read!" —Julia Louis Dreyfus Jenny Lawson meets Nora Ephron in this joyful memoir-in-vignettes on living—and thriving—with anxiety from a multiple Emmy Award-winning comedy writer whose credits include *Succession* and *Veep*. When Georgia Pritchett found herself lost for words—a bit of a predicament for a comedy writer—she turned to a therapist, who suggested she try writing down some of the things that worried her. But instead of a grocery list of concerns, Georgia wrote this book. A natural born worrywart, Georgia's life has been defined by her quirky anxiety. During childhood, she was agitated about the monsters under her bed (Were they comfy enough?). Going into labor, she fretted about making a fuss ("Sorry to interrupt, but the baby is coming out of my body," I said politely). Winning a prestigious award, she agonized over receiving free gifts after the ceremony (It was an excruciating experience. Mortifying). Soul-baring yet lighthearted, poignant yet written with a healthy dose of self-deprecation, *My Mess Is a Bit of a Life* is a tour through the carnival funhouse of Georgia's life, from her anxiety-ridden early childhood where disaster loomed around every corner (When I was little I used to think that sheep were clouds that had fallen to earth. On cloudy days I used to worry that I would be squashed by a sheep), through the challenges of breaking into an industry dominated by male writers, to the exquisite terror (and incomparable joy) of raising children. Delightfully offbeat, painfully honest, full of surprising wonders, and delivering plenty of hilarious, laugh-out-loud moments, *My Mess Is a Bit of a Life* reveals a talented, vulnerable, and strong woman in all her wisecracking weirdness, and makes us love it—and her—too.

The wildly popular YouTube star behind CLEAN MY SPACE presents the breakthrough solution to cleaning better with less effort. Melissa Maker is beloved by fans all over the world for her completely re-engineered approach to cleaning. As the dynamic new authority on home and living, Melissa knows that to invest any of our precious time in cleaning, we need to see big, long-lasting results. So, she developed her method to help us get the most out of our effort and keep our homes fresh and welcoming every day. In her long-awaited debut book, she shares her revolutionary 3-step solution:

- Identify the most important areas (MIAs) in your home that need attention
- Select the proper products, tools, and techniques (PTT) for the job
- Implement these new cleaning routines so that they stick

Clean My Space takes the chore out of cleaning with Melissa's incredible tips and cleaning hacks (the power of pretreating!), her lightning fast 5 – 10 minute "express clean" routines for every room when time is tightest, and her techniques for cleaning even the most daunting places and spaces. And a big bonus: Melissa gives guidance on the best non-toxic, eco-conscious cleaning products and offers natural cleaning solution recipes you can make at home using essential oils to soothe and refresh. With Melissa's simple, groundbreaking method you can truly live in a cleaner, more cheerful, and calming home all the time.

Implementing the Circular Economy for Sustainable Development presents the concept of the circular economy with the goal of understanding its present status and how to better implement it, particularly through environmental policies. It first tackles the definition of a circular economy in the context of sustainability and the differences in defining the concept across disciplines, including its fallibilities and practical examples. It then goes on to discuss the implementation of a circular economy, including the increasing variety of technological, mechanical, and chemical procedures to contend with and the need for stakeholder support in addition to improved business models. The second half of the book, therefore, presents tools, approaches, and practical examples of how to shape environmental policy to successfully implement a circular economy. It analyzes deficiencies of current regulations and lays the groundwork for the design of integrated environmental policies for a circular economy. Authored by an expert in environmental economics with decades of experience, *Implementing the Circular Economy for Sustainable Development* is a timely, practical guide for sustainability researchers and policymakers alike to move more efficiently toward a circular economy and sustainable development. Presents a clear view of the critical components, features, and issues of a circular economy. Discusses a variety of practical examples from current policies in the context of a circular economy to better understand the challenges associated with its implementation. Analyzes strengths and weaknesses of current environmental policies and their interactions with innovations in engineering and science.

*Power Converter with Digital Filter Feedback Control* presents a logical sequence that leads to the identification, extraction, formulation, conversion, and implementation for the control function needed in electrical power equipment systems. This book builds a bridge for moving a power converter with conventional analog feedback to one with modern digital filter control and enlists the state space averaging technique to identify the core control function in analytical, closed form in s-domain (Laplace). It is a useful reference for all professionals and electrical engineers engaged in electrical power equipment/systems design, integration, and management. Offers logical sequences to identification, extraction, formulation, conversion, and implementation for the control function needed. Contains step-by-step instructions on how to take existing

analog designed power processors and move them to the digital realm. Presents ways to extract gain functions for many power converters' power processing stages and their supporting circuitry. Consumers Digest Academic Press

This original book presents in-depth research into thirteen successful Chinese private enterprises through interviews with their founder-entrepreneurs. While Chinese economic growth has focused primarily on governmental policies and institutional factors, *Leadership of Chinese Private Enterprises* proposes that the success of these firms was primarily due to the "visible hands" of these entrepreneurs. The authors present insights into the managerial realities of four separate industries: Financial and insurance, IT and e-commerce, construction and real estate, and consumer goods. Through a critical evaluation of interviews, this book identifies the managerial recipe for entrepreneurial success in competitive and inhospitable environments and offers a model of private firm leadership and leadership principles that guide their strategies and relationships. *Journeys with a Tin Can Pilgrim* Routledge

"Definitely, a game changer! Design experience is the power shift to our era what mass marketing was to the last century." John Sculley former CEO, Pepsi and Apple "Great design is about creating a deep relationship with your customers. If you don't, you're roadkill. This book shows you how and much, much more. Be prepared to have your mind blown." Bill Burnett Executive Director, Design Program, Stanford University "Design is the last great differentiator, and yet so few really understand it. *Do You Matter?* offers a marvelous series of direct, in-your-face observations and drives home the means to an absolutely integrated design strategy." Ray Riley Design GM, Entertainment and Devices, Microsoft "This book will challenge you to ask and answer what arguably are the most important questions an executive can ponder today. So open up." Noah Kerner CEO, Noise and coauthor, *Chasing Cool* More and more companies are coming to understand the competitive advantage offered by outstanding design. With this, you can create products, services, and experiences that truly matter to your customers' lives and thereby drive powerful, sustainable improvements in business performance. But delivering great designs is not easy. Many companies accomplish it once, or twice; few do it consistently. The secret: building a truly design-driven business, in which design is central to everything you do. *Do You Matter?* shows how to do precisely that. Legendary industrial designer Robert Brunner (who laid the groundwork for Apple's brilliant design language) and Stewart Emery (Success Built to Last) begin by making

---

an incontrovertible case for the power of design in making emotional connections, deepening relationships, and strengthening brands. You'll learn what it really means to be "design-driven" and how that translates into action at Nike, Apple, BMW and IKEA. You'll learn design-driven techniques for managing your entire experience chain; define effective design strategies and languages; and learn how to manage design from the top, encouraging "risky" design innovations that lead to entirely new markets. The authors show how (and how not) to use research; how to extend design values into marketing, manufacturing, and beyond; and how to keep building on your progress, truly "baking" design into all your processes and culture.

The goal of the book is to assist the designer in the development of parts that are functional, reliable, manufacturable, and aesthetically pleasing. Since injection molding is the most widely used manufacturing process for the production of plastic parts, a full understanding of the integrated design process presented is essential to achieving economic and functional design goals. Features over 425 drawings and photographs.
