This book features essays by leading legal scholars on 'landmark' labour law cases from the mid-19th century to the present day. The essays are acutely sensitive to the historical and theoretical context of each case, and the volume provides original and sometimes startling new perspectives on some familiar friends. There are few activities as distinctively human as work and labour. The book traces the development of labour law through the social struggles and economic conflicts between workers, trade unions, and employers. The narrative arc of its landmark cases reveals the richness and complexity of the human story played out in the working lives of real people. It also charts the remarkable transformation of the constitutional role of courts in labour law, from instruments of class oppression to the vindication of workers' fundamental rights at work. The collection will be of interest to students, scholars, and legal practitioners in labour and equality law, as well as students in management studies, industrial relations, and labour history.

Marine Combustion Practice reviews developments in marine combustion practice and covers topics ranging from combustion equipment for boilers to diesel injection equipment, nuclear reactors, and the use of natural gas in marine boilers. Automatic control of oil-fired marine boilers is discussed, along with fundamental types of injection pumps and factors affecting combustion in marine boilers. This book is divided

into four sections and opens with a discussion on solid fuel used for marine purposes, including coal, and properties of coal affecting combustion and combustion equipment design. The reader is then introduced to fuel storage and supply systems; types of fuel injectors and fuel pumps; physics and technology of nuclear power; and sea transport of liquid petroleum gases used in marine boilers. Subsequent chapters deal with factors affecting marine combustion; characteristics of boil-off; and safety aspects of the use of natural gas in marine boilers. This monograph will be a valuable source of information for marine engineers and for practitioners and research workers in the field of marine combustion.
