Cluster analysis or clustering is the task of grouping a set of objects in such a way that objects in the same group (called a cluster) are more similar (in some sense) to each other than to those in other groups (clusters). It is a main task of exploratory data mining, and a common technique for statistical data analysis, used in many fields, including machine learning, pattern recognition ...

Data analytics can be defined as "the process of gathering and analyzing data and then using the results to make better decisions" (Stippich and Preber, Data Analytics: Elevating Internal Audit's Value (Institute of Internal Auditors Research Foundation 2016)). Under this definition, data analytics is clearly a process that organizations have always attempted to optimize.
