Through the evaluation and integration of developmental theories, this volume proposes a new structural/behavioral model of development. Dr. Horowitz's model helps account for both the behavioral development of children (with extensions across the life-span) and for the universal and non-universal characteristics in human behavioral development. Exploring Developmental Theories also sheds a new and different light on the nature- nurture or heredity-environment controversy and on the topic of continuity and discontinuity in development. Exploring Developmental Theories: \*examines the concepts of stage, structure, and systems; organismic theory; and general system theory; \*analyzes open and closed systems as well as organismic and mechanistic world views; \*integrates the concepts associated with organismic and mechanist world views; \*examines learning mechanisms and processes that foster the acquisition of behavior, and \*discusses the strengths and weaknesses of Gessel, Piaget, and behaviorism in accounting for behavioral development.

**The APSAC Handbook on Child Maltreatment** Wiley Global Education

Despite the fact that most people become parents and everyone who has ever lived has had parents, parenting remains a mystifying subject about which almost everyone has opinions, but about which few people agree. Striking permutations on the theme of parenting are emerging--single parenthood, blended families, lesbian and gay parents, and teen versus fifties first-time moms and dads. Divided into four volumes, the Handbook of Parenting is concerned with different types of parents, basic characteristics of parenting, forces that shape parenting, problems faced by parents, and the practical sides of parenting. Contributors have worked in different ways toward understanding all of these diverse aspects of parenting and look to the most recent research and thinking in the field to shed light on many topics every parent has wondered about. Because development is too subtle, dynamic, and intricate to admit that parental caregiving alone determines the course and outcome of ontogeny, volume 1 concerns how children influence parenting. Volume 2 relates parenting to its biological roots and sets parenting in its ecological framework. Volume 3 distinguishes among the cast of characters responsible for parenting and is revealing of the psychological make-ups and social

interests of those individuals. Volume 4 describes problems of parenting as well as the promotion of positive parenting practices. Written to be read and absorbed in a single sitting, each chapter addresses a different but central topic in parenting, and is rooted in current thinking and theory as well as classic and modern research on that topic. All chapters follow a standard organization including an introduction to the chapter as a whole followed by historical considerations of the topic, a discussion of central issues and theory, a review of classic and modern research, forecasts of future directions for theory and research, and a conclusion. In addition to considering their own convictions and research, the chapter contributors present and broadly interpret all major points of view and central lines of inquiry.

**Child Psychology in Practice** John Wiley & Sons

A decade ago, *Advances in Clinical Child Psychology* was conceived to provide approximately annual updates on the forward edge of research and practice in this rapidly growing field. A look back at the 56 chapters published in previous volumes provides a broad overview of the direction of advancement in clinical child psychology, at least as viewed by one collection of editors, consulting editors, and authors. The trends are clear: There have been decreasing numbers of advances in modes and methods of therapy, an increasing emphasis on the family, a renewed interest in experimental psychopathology (studies of classification, etiology, and prognosis), a growing rapprochement between biological and psychological perspectives, and continued strong interest in cognition and social relationships. The current volume clearly shows these directions in the growth of the field. One chapter discusses etiology, four are concerned with the psychopathology of specific diagnostic categories, one takes an expanded cognitive approach to social competence, and two look at the family system by examining the effects of male parents and children on other members of the family. A final chapter opens discussion on the important topic of the nature of excellence in the training of clinical child psychologists. It is hoped that this chapter will initiate a national dialogue on this multifaceted and often neglected topic.
