Core Curriculum for Neonatal Intensive Care Nursing - E-Book Elsevier

This book combines valid physiology and treatment strategies with the institutional experience of one of the leading German pediatric heart centers. It is intended as a pragmatic guide, focusing on daily practice and bedside medicine: straightforward, easy to implement, and results-oriented. It offers readers a profound understanding of intensive care, with a specific focus on organ systems, their interactions, and the effect of life support technologies, pursuing a comprehensive approach to congenital heart defects and therapies, including pitfalls and solutions. The target group is extended towards pediatric cardiologists and anesthesiologists by integrating chapters on the systematic analysis of hemodynamics and anatomy, diagnostics and treatment of congenital heart defects, plus a chapter on modern anesthesiology during heart operations with a focus on early extubation that minimizes on-pump and medication trauma. As such, the book offers a pragmatic and clinically oriented guide for physicians with advanced experience and expertise in (cardiac) intensive and intermediate care, as well as beginners and junior physicians.

Fully updated and revised with expanded sections covering therapeutic hypothermia and developmental care amongst other advances in the field, the *Oxford Handbook of Neonatology* is a valuable and up-to-date guide to a rapidly

evolving field. Taking a valuable family-centred approach to neonatal care, this is the essential resource for all healthcare professionals working with newborns, from the undergraduate medical student to the doctor on the ward. *Neonatal Nursing in Australia and New Zealand* Springer

Perfect as a resource in the field or for exam preparation, this authoritative reference from the Association of Women's Health, Obstetric, and Neonatal Nurses (AWHONN) includes in-depth coverage of the most common neonatal disorders and their management. The concise outline format highlights the essentials of each condition including definition, etiology, pathophysiology, signs and symptoms, diagnostic tests, treatments, and outcomes to help you find important information quickly. This new edition also features an increased focus on evidence-based practice, new CAMTS and AAMS guidelines, new techniques for PICC placement, and changes to the Neonatal Resuscitation Program. All necessary information to prepare for the neonatal intensive care nursing certification examination is included. Concise outline format provides access to important nursing considerations associated with the management of the most common conditions in the neonate. Text provides a collaborative effort between the three most authoritative associations in neonatal intensive care nursing - AWHONN, AACN, and NANN. Information on families, ethics, legal issues, research, case management, and the transition to home acknowledge the full scope of neonatal nursing practice. NEW! CAMTS and AAMS guidelines, techniques for PICC placement, and changes to the Neonatal Resuscitation Program are just a few of the updates that reveal the importance the new edition places on safety practices and procedures. NEW! Updated chapter on Patient Safety includes selected improvement strategies and resources for neonatal nurses to build a patient safety toolkit, discusses TeamSTEPPS (Team Strategies and Tools to Enhance Performance and Patient Safety), and recognizes human issues, such as shift work and fatigue. NEW! Increased focus on evidence-based practice for preterm infants, medications, and antepartum-intrapartum complications sets the standard for neonatal nursing practice. NEW! Strategies to promote inclusionary care better reflect nursing care today by focusing on family-centered care, comprehensive perinatal records, health care teams in the NICU, and best practices in the care of the late preterm infant. NEW! Comprehensively revised chapter on Immunology identifies risk factors for infection associated with term and preterm infants, distinguishes clinical symptoms and therapies associated with TORCHES CLAP spectrum infections, and includes prevention strategies for hospital-acquired infections. NEW! Thoroughly updated content and references reflect currency and technologic advances. NEW! Refocused chapter on Developmental Care guides the nurse to use assessment within the context of the environment and situation to initiate interventions in the moment or use patterns of responses for developing plans of care and presents core measures on evaluating developmental care practices in the NICU. *Developmental and Therapeutic Interventions in the NICU* Springer

In a probing look at the reality of everyday choices in neonatal intensive care units,

sociologist Renee Anspach explores the life-and-death dilemmas that have fueled much national debate. Anspach considers the roles of parents, doctors, nurses, and bioethicists in deciding the fate of terminally ill or malformed newborns. *An Evidence-Based Approach to Conditions and Procedures* Mosby

Written specifically for nurses, this clinical handbook provides unmatched comprehensive information on pain management for the vulnerable neonatal population. Given the possibility of significant short- and long-term consequences of neonatal pain if left unmanaged, all nurses in neonatal settings should be familiar with the origins of neonatal pain, pain assessment, and the pharmacologic and nonpharmacologic pain management techniques outlined and explained in this clinical guide. Each chapter contains critical information on safe and proven therapies for common painful procedures, including lists of dosages and side effects. Nurses can use this clinical handbook to adopt strategies to routinely assess pain, minimize the number of painful procedures, employ drug-based and non-drug-based therapies that prevent pain in routine procedures, and eliminate pain associated with surgery. As a well-rounded guide and resource for use in neonatal settings, this portable reference also features chapters on how nurses can engage others to assist with neonatal pain, and expands upon the role of the family to ensure the best neonatal care. KEY FEATURES: The first clinical handbook specifically for nurses treating neonates A holistic, state-of-the-art resource describing pain management techniques Addresses assessment, medications, and the application of both pharmacologic and nonpharmacologic pain management techniques Lists dosages and side effects Discusses how to manage withdrawal pain from neonatal abstinence syndrome

A Manual of Neonatal Intensive Care Routledge
There are many books on the care of the sick infant and some are excellent. Most, however, are written with medicine in mind. This book is written mainly by experienced neonatal nurses, although some chapters have been written by the appropriate specialists. It is intended primarily for nurses who look after sick infants and is not intended to be an exhaustive reference but to address some of the issues and concepts of neonatal care in the 1990s. Nursing models are an important part of neonatal care in the 1990s but this book has not been written within this framework. There are several reasons for this: arguably no current model is ideally suited to neonates and the favouring of one particular model might restrict the book's applicability. Also, as contributors from other disciplines were invited to contribute we were anxious that these chapters did not stand out as oddities. Additionally, much neonatal care overlaps and were a framework to be used in its entirety for each nursing care chapter we felt that there could be some repetition; conversely, if a framework was fragmented in

some chapters to cover specific areas of care, we were concerned that the overall effect would have been 'bitty'. We felt that such treatment of nursing models would have been unjustifiable. In this book, the terms 'infant' and 'baby' are used interchangeably and where the term 'he' is used, the term 'she' is equally appropriate.

Handbook of Neonatal Intensive Care Springer

This edition of the Manual of Neonatal Care has been completely updated and extensively revised to reflect the changes in fetal, perinatal, and neonatal care that have occurred since the sixth edition. This portable text covers current and practical approaches to evaluation and management of conditions encountered in the fetus and the newborn, as practiced in high volume clinical services that include contemporary prenatal and postnatal care of infants with routine, as well as complex medical and surgical problems. Written by expert authors from the Harvard Program in Neonatology and other major neonatology programs across the United States, the manual's outline format gives readers rapid access to large amounts of valuable information quickly. The Children's Hospital Boston Neonatology Program at Harvard has grown to include 57 attending neonatologists and 18 fellows who care for more than 28,000 newborns delivered annually. The book also includes the popular appendices on topics such as common NICU medication guidelines, the effects of maternal drugs on the fetus, and the use of maternal medications during lactation. Plus, there are intubation/sedation guidelines and a guide to neonatal resuscitation on the inside covers that provide crucial information in a quick and easy format.

Issues of thrombosis, bleeding, and transfusion are extremely common, and often complex, in critically ill patients. Haematology in Critical Care: A Practical Handbook provides a dependable source of expert guidance on how to handle common haematological problems seen in the critical care setting, as well as the acute care of patients with a primary haematological disorder. Full-time clinical haematologists, regularly attending on intensive care, the Editors begin with an approach to abnormal laboratory tests, following with a disease-orientated approach to topics such as coagulation and haematological malignancy. Other key topics include paediatric and neonatal care, transfusion, point of care testing and the emergency presentation of haematological disease. This title brings together two of the most highly scientific specialties in clinical practice, delivering

a practical approach to these problems, and guiding the clinician through the diagnosis and management of common scenarios encountered in the ICU.

Clinical Handbook of Neonatal Pain Management for Nurses Merenstein & Gardner's Handbook of Neonatal Intensive Care

Written by outstanding authorities from all over the world, this comprehensive new textbook on pediatric and neonatal ventilation puts the focus on the effective delivery of respiratory support to children, infants and newborns. In the early chapters, developmental issues concerning the respiratory system are considered, physiological and mechanical principles are introduced and airway management and conventional and alternative ventilation techniques are discussed. Thereafter, the rational use of mechanical ventilation in various pediatric and neonatal pathologies is explained, with the emphasis on a practical step-by-step approach. Respiratory monitoring and safety issues in ventilated patients are considered in detail, and many other topics of interest to the bedside clinician are covered, including the ethics of withdrawal of respiratory support and educational issues. Throughout, the text is complemented by numerous illustrations and key information is clearly summarized in tables and lists.
