Based on detailed multi-disciplinary analyses of more than 800 recorded handover interactions, audits of written handover documentation, interviews and survey responses, the contributing authors identify features of effective and ineffective clinical handovers in diverse hospital contexts. The authors then translate their descriptive findings into practical protocols, communication strategies and checklists that clinicians, managers and policy makers can apply to improve the safety and quality of clinical handovers. All the contributors are affiliated with the International Research Centre for Communication in Healthcare (IRCCH), an international multidisciplinary organisation of over 90 healthcare professionals from more than 17 countries committed to improving improving communication in healthcare systems around the world. 'The authors have created a new and tightly woven systems safety net that will, if implemented, significantly reduce the occurrence of errors resulting from cumulative communication failures.' -H. Esterbrook Longmaid III, MD, FACR, President of Medical Staff, Beth Israel Deaconess-Milton Hospital, Milton, MA USA 'Uncommonly valuable for the rigorous, original communication research it reports and for the careful translation of the research findings into practical strategies that actually improve clinical handovers in the real world of practice.' -Professor Suzanne Kurtz, Washington State University 'This clear, plain English book is an outstanding resource for the training of all involved in healthcare.' -Elizabeth Trickett, (Former) Director of Safety and Quality, ACT Health, Australia

Delivering COBie Using Autodesk Revit (Perfect Bound) John Wiley & Sons

There is much industry guidance on implementing engineering projects and a similar amount of guidance on Process Safety Management (PSM). However, there is a gap in transferring the key deliverables from the engineering group to the operations group, where PSM is implemented. This book provides the engineering and process safety deliverables for each project phase along with the impacts to the project budget, timeline and the safety and operability of the delivered equipment.

Despite co-ordination being the principal focus of the Lead Designer's role, there is very little written about how to undertake these duties. What tools can the Lead Designer use to address the many complexities of developing a design as part of an iterative process? How can the Lead Designer redefine what they do using a digital world to provide profoundly different and new services? This book analyses at all of these questions, setting out how the Lead Designer can perform effectively and efficiently in the digital world, addressing clients' new whole life project

requirements and new ways of constructing and assembling buildings. Managing increasing numbers of specialists in the construction process requires experience to ensure that their contributions are properly managed and produced at the right time. This book considers this challenge. It will also consider how the Lead Designer can effectively lead and manage health and safety aspects and risks (the principal designer role in UK regulations).

This book is a compilation of selected papers from the fifth International Symposium on Software Reliability, Industrial Safety, Cyber Security and Physical Protection of Nuclear Power Plant, held in November 2020 in Beijing, China. The purpose of this symposium is to discuss Inspection, test, certification and research for the software and hardware of Instrument and Control (I&C) systems in nuclear power plants (NPP), such as sensors, actuators and control system. It aims to provide a platform of technical exchange and experience sharing for those broad masses of experts and scholars and nuclear power practitioners, and for the combination of production, teaching and research in universities and enterprises to promote the safe development of nuclear power plant. Readers will find a wealth of valuable insights into achieving safer and more efficient instrumentation and control systems.

The Making of The Wandering Earth John Wiley & Sons

It is a practical, illustrated guide to the Foundation Programme, introduced throughout the UK to regulate and standardise the two-year training of newly qualified doctors. It provides specific information on how to apply for a Foundation post, the curriculum, assessment methods, and maintaining a portfolio, as well as reviewing the pros and cons of the various medical specialities which doctors can pursue after the Foundation years. The authors address issues of concern to all groups involved in the Foundation programme - trainees, trainers and senior doctors - and gives concrete examples of completed documentation and assessment. Helps UK and overseas doctors in choosing and applying for their Foundation Programme. Helps trainees and trainers understand the curriculum, the teaching and learning methods, and the use of the portfolio. Explains the various assessment procedures including the 'RITA' (Record of In-Training Assessment) and gives examples. Helps trainees manage their learning and pass their assessments. Informs trainers - including consultants and GPs - about the purpose of the Foundation Programme and how to use the less-familiar assessment tools.

This new book provides evidence based guidelines for the immediate clinical management of major trauma. It has been written by clinicians with many years of trauma experience, and endorsed as authoritative by Trauma Care (UK). The UK now has highly effective trauma systems. Clinical developments include the introduction of damage control resuscitation, tranexamic acid, blood product resuscitation, novel hybrid resuscitation and an emphasis on the control of major external haemorrhage as part of a new ABCDE approach. Consequently, more individuals with major trauma are surviving than ever before. Optimal pre-hospital care is essential for improved survival rates and reduced morbidity.
