Visitors to the Arctic enter places that have been traditionally imagined as otherworldly. This strangeness fascinated audiences in nineteenth-century Britain when the idea of the heroic explorer voyaging through unmapped zones reached its zenith. The Spectral Arctic re-thinks our understanding of Arctic exploration by paying attention to the importance of dreams and ghosts in the quest for the Northwest Passage. The narratives of Arctic exploration that we are all familiar with today are just the tip of the iceberg: they disguise a great mass of mysterious and dimly lit stories beneath the surface. In contrast to oft-told tales of heroism and disaster, this book reveals the hidden stories of dreaming and haunted explorers, of frozen mummies, of rescue balloons, visits to Inuit shamans, and of the entranced female clairvoyants who travelled to the Arctic in search of John Franklin's lost expedition. Through new readings of archival documents, exploration narratives, and fictional texts, these spectral stories reflect the complex ways that men and women actually thought about the far North in the past. This revisionist historical account allows us to make sense of current cultural and political concerns in the Canadian Arctic about the location of Franklin's ships.

Diffuse (non-point source) pollution is increasingly being recognised as a major source of water quality problems in both surface and ground water. Indeed, as pollution resulting from point sources is reduced by the efforts of regulators, diffuse sources frequently remain as the dominant source of pollution. The book is an introductory text covering the nature, causes and the significance of diffuse pollution of both urban and rural origin. Best management practices to tackle the problems are examined as are the ways in which the adoption of such practices may be brought about. Use is made of case studies from several countries to examine the strengths and weaknesses of various approaches. Diffuse Pollution covers both urban and rural sources. Urban sources include run-off from impermeable surfaces of roads, industrial areas and housing which may be contaminated by hydrocarbons, heavy metals, organic chemicals and other undesirable substances. Rural sources include water containing pollutants arising from agriculture and forestry such as plant nutrients, pesticides, microbes and soil itself. This concise book will prove useful to practitioners in the field of pollution control both in an urban and a rural environment, to regulators, to researchers new to the field, and to academics and students. An extensive reference section aids the reader in exploring the subject further. An Alpha Legion warband goes an epic quest for salvation that will pit them against both the Word Bearers and the Inquisition in a thrilling science fiction adventure. In the hostile universe of the 41st millennium, where allegiances are ever fickle, few of the Emperor's sons are more

difficult to understand or predict than the Alpha Legion. Branded traitor since the Heresy, their motives and actions have always been shrouded in mystery. Alpha Legionnaire Occam the Untrue leads his warband out of its hunting grounds in the Maelstrom on an epic quest for salvation, not just for himself, but for his whole Legion. With the forces of the Inquisition snapping at their heels, Occam and his followers must use all their guile and considerable martial prowess as they make their way to the cold heart of the galaxy, to a confrontation that no one, least of all Occam himself, could have foreseen.

In spring of 2006, George Frizzell, aka George the Painter, agreed to write a monthly column for The Horse/Backstreet Choppersmagazine. The column quickly became George's podium, his opportunity to expound on everything from the over-use of cell-phones to his personal demons and health issues. To say that George has a way with words is a huge understatement: "...Little did I realize but every injury that I endured from some bike related mishap that I miraculously walked away from was never really forgotten. All the drunken cartwheels that I experienced when I was launched from my saddle during some drug and alcohol induced stupidity would be held in escrow only to be paid for later down the road..." George the Painter - A Bathroom Reader, is five years worth of George's columns, roughly 75,000 words - and an additional 48 pages of color photos. And whether the topic is motorcycles, the posers who ride them or his recent trip from Arizona to the East Coast, the prose is entertaining and truly unique. George has a huge following, and after reading just a small sample of his writing, it's easy to see why.

This book is a welcome reassertion of an old tradition of interdisciplinary research. That tradition has tended to atrophy in the last decade, largely because of an enormous expansion of the domain of neoclassical economics. The expansion has fed on two scientific developments: first, human capital theory; second, contract theory. Both developments have taken phenomena critical to the operation of the economy but previously understood in terms of categories separate and distinct from those with which economists generally work and sought to apply the same analytical techniques that we use to understand other economic problems. Human capital theory has applied conventional techniques to questions of labor supply. It began this endeavor with the supply of trained labor and then expanded to a general theory of labor supply by broadening the analysis to the allocation of time over the individual's life, the interdependencies of supply decisions within the family, and finally to the formation of the family itself. Similarly, contract theory has moved from a theory that explains the existence of classical economic institutions to a theory of their formation and internal operation. The hallmark of both of these developments is the extension and application of analytical techniques based on purposive maximization under constraints and the interaction of individual decision makers through a competitive market or its analogue.

THE 30th ANNIVERSARY EDITION WITH NEW, NEVER-BEFORE-PUBLISHED MATERIAL

After the Internet, what came next? Enter the Metaverse - cyberspace home to avatars and software daemons, where anything and just about everything goes. Newly available on the Street - the Metaverse's main drag - is Snow Crash. A cyberdrug that reduces avatars in the digital world to dust, but also infects users in real life, leaving them in a vegetative state. This is bad news for Hiro, a freelance hacker and the Metaverse's best swordfighter, and mouthy skateboard courier Y. T.. Together, investigating the Infocalypse, they trace back the roots of language itself to an ancient Sumerian priesthood and find they must race to stop a shadowy virtual villain hell-bent on world domination. In this special edition of the remarkably prescient modern classic, Neal Stephenson explores linguistics, computer science, politics and philosophy in the form of a break-neck adventure into the fast-approaching yet eerily recognizable future. This book explains how designing, playing and modifying computer games, and understanding the theory behind them, can strengthen the area of digital humanities. This book aims to help digital humanities scholars understand both the issues and also advantages of game design, as well as encouraging them to extend the field of computer game studies, particularly in their teaching and research in the field of virtual heritage. By looking at re-occurring issues in the design, playtesting and interface of serious games and game-based learning for cultural heritage and interactive history, this book highlights the importance of visualisation and self-learning in game studies and how this can intersect with digital humanities. It also asks whether such theoretical concepts can be applied to practical learning situations. It will be of particular interest to those who wish to investigate how games and virtual environments can be used in teaching and research to critique issues and topics in the humanities, particularly in virtual heritage and interactive history.

London to Cape Town overland by Panther and sidecar, pulling a trailer. No roads, no backup -- just straight across the Sahara through equatorial Africa, and South to the Cape -- in 1935, without even a compass! This is quite simply the most incredible Panther journey ever! Undeterred by nomads, sand drifts, heat, rain, rivers, breakdowns and politics, Theresa Wallach and Florence Blenkiron completed a journey that might well defeat a modern bike. From oasis to oasis arguing with the French Foreign Legion for permission to continue, and winning; fashioning a tow hitch for the trailer when it broke in the desert; rebuilding the entire engine from scratch in Agadez; meeting gorillas, lions and snakes on the road, staying in African villages and meeting an amazing variety of friendly and helpful people. Not to mention having an accident in Tanganyika (Tanzania) with the only car seen on the road for days!

The Cambridge Handbook of Morphology describes the diversity of morphological phenomena in the world's languages, surveying the methodologies by which these phenomena are investigated and the theoretical interpretations that have been proposed to explain them. The Handbook provides morphologists with a comprehensive account of the interlocking issues and hypotheses that drive research in morphology; for linguists generally, it presents current thought on the interface of morphology with other grammatical components and on the significance of morphology for understanding language change and the psychology of language; for students of linguistics, it is a guide to the present-day landscape of morphological science and to the advances that have brought it to its current state; and for readers in other fields (psychology, philosophy, computer science, and others), it reveals just how much we know about systematic relations of form to content in a language's words - and how much we have yet to learn.
