Infotainment and navigation systems, Wi-Fi, automatic software updates, and other innovations aim to make driving more convenient. But vehicle technologies haven't kept pace with today's more hostile security environment, leaving millions vulnerable to attack. The Car Hacker's Handbook will give you a deeper understanding of the computer systems and embedded software in modern vehicles. It begins by examining vulnerabilities and providing detailed explanations of communications over the CAN bus and between devices and systems. Then, once you have an understanding of a vehicle's communication network, you'll learn how to intercept data and perform specific hacks to track vehicles, unlock doors, glitch engines, flood communication, and more. With a focus on low-cost, open source hacking tools such as Metasploit, Wireshark, Kayak, can-utils, and ChipWhisperer, The Car Hacker's Handbook will show you how to:

- Build an accurate threat model for your vehicle
- Reverse engineer the CAN bus to fake engine signals
- Exploit vulnerabilities in diagnostic and data-logging systems
- Hack the ECU and other firmware and embedded systems
- Feed exploits

through infotainment and vehicle-to-vehicle communication systems – Override factory settings with performance-tuning techniques – Build physical and virtual test benches to try out exploits safely If you're curious about automotive security and have the urge to hack a two-ton computer, make The Car Hacker's Handbook your first stop. For the Retired Blues Crew, a small group of retired LAPD police officers that meet once a month to share old war stories and enjoy each others company, accepting retirement was a hard pill to swallow. Once considered savvy street warriors who risked life and limb protecting the good citizens of Los Angeles, they were now the forgotten heroes whose past heroic deeds were now only remembrances visited through their colorful story telling during their once a month get-togethers. Like all things in life, they were all expendable and the guys in the Retired Blues Crew had been replaced by a new generation of street warriors. To the old dogs who were put out to pasture, the new centurions were taking their places with new technology and a confidence that bordered on disrespect for those who had paved the way before them. The argument that the old days of crushing crime without the benefit of all the new-fangled gadgets was more rewarding than the technology of the future was a misconception of the new breed that were now in charge of protecting the citizens of Los Angeles. For the select group of old story tellers, they needed to add one more chapter in their lives,

something for the street warriors of the present to remember them by when their time finally came and they were reduced to second class citizens too old to do the job anymore. This small tight knit group of old street warriors had enough and it was time to prove beyond a shadow of a doubt that they weren't too old to out-smart and out-wit the hightech rouges who have now taken their places. Proving that computers and gadgets could never replace the wisdom and experience that the old dogs were blessed with wouldn't be an easy task, but they were determined to challenge the new breed and beat them at their own game. They knew whatever it was they were going to do couldn't replicate anything like the violent movies you see where people die, get hurt or cars get wrecked and buildings are blown up, after all they were cops or at least they were once. That being said, the old dogs had to pull off the perfect caper and they had to do it without claiming any of the bragging rights they so much yearned for. It would have to be for no other reason than For Greater Glory. In that one of their own had been diagnosed with cancer with less than six months to live, they only had a

small window of opportunity to get it done. Since he was the architect behind the perfect crime referred to as Operation Blue Eclipse, their success would depend on how well the plan was executed with no room for error. If all went as planned and after all was said and done, the Retired Blues Crew would truly know who the best of the best was.

"What, exactly, is 'National Cyber Security'? The rise of cyberspace as a field of human endeavour is probably nothing less than one of the most significant

developments in world history. Cyberspace already directly impacts every facet of human existence including economic, social, cultural and political developments, and the rate of change is not likely to stop anytime soon. However, the socio-political answers to the questions posed by the rise of cyberspace often significantly lag behind the rate of technological change. One of the fields most challenged by this development is that of 'national security'. The National Cyber Security Framework Manual provides detailed background information and in-depth theoretical frameworks to help the reader understand the various facets of National Cyber Security, according to different levels of public policy formulation. The four levels of government--political, strategic, operational and tactical/technical--each have their own perspectives on National Cyber Security, and each is addressed in individual sections within the Manual. Additionally, the Manual gives examples of relevant institutions in National Cyber Security, from top-level policy coordination bodies down to cyber crisis management structures and similar institutions."--Page 4 of cover.
