The Things a Brother Knows Penguin

From the author of *How We Die*, the extraordinary story of the development of modern medicine, told through the lives of the physician-scientists who paved the way. How does medical science advance? Popular historians would have us believe that a few heroic individuals, possessing superhuman talents, lead an unselfish quest to better the human condition. But as renowned Yale surgeon and medical historian Sherwin B. Nuland shows in this brilliant collection of linked life portraits, the theory bears little resemblance to the truth. Through the centuries, the men and women who have shaped the world of medicine have been not only very human, but also very much the products of their own times and places. Presenting compelling studies of great medical innovators and pioneers, *Doctors* gives us a fascinating history of modern medicine. Ranging from the legendary Father of Medicine, Hippocrates, to Andreas Vesalius, whose Renaissance masterwork on anatomy offered invaluable new insight into the human body, to Helen Taussig, founder of pediatric cardiology and co-inventor of the original "blue baby" operation, here is a volume filled with the spirit of ideas and the thrill of discovery.

Thoughtrave is the immediate and most detailed archive of Lady Gaga's emotional, intellectual, philosophical, and spiritual evolution, a reclaiming of her art (and humanity) from within the center of her celebrity during one of the most difficult transitions of her career: Summer 2013-Fall 2014. Lady Gaga: I don't like being used to make money. I feel sad when I am overworked and that I just become a money making machine and that my passion and my creativity take a backseat. That makes me unhappy. So, what did I do? I started to say no. Not doing that. I don't want to do that. I'm not taking that picture. Not going to that event. Not standing by that because that's not what I stand for. Thoughtrave marks perhaps the most important (and unconditional, unpublished, unencumbered) insights into the music industry, the personal battles that accompanied her transition from Stefani to Gaga. "It's one of those rare moments in life when you ask a question of someone you've admired for many years and receive the most honest of answers leading both people into a relationship that was and remains one of the most important of my life," says Baum, a professor, producer, composer, writer, editor, and activist for adjunct professors. As Baum explains to Stefani in one of the many interviews published here for the first time, Robert Craig Baum: It's uncanny for me to look back at 2008-2011 - when I was intensely meditating on the problem "Why is there any being at all?" - to find evidence of your intervention here with me...to find you, back then...before I knew you. It was almost as if I was playing the Bruce Willis character in *Twelve Monkeys*, overshooting my mark in time/space, aiming for this particular conversation but speaking through Ereignis (life gives) to a moment I (and many others) call "headphones on." As George Elerick writes in his Introduction to the book, "In Hand-to-Hand Battle for the Users," "The book you hold in your hands easily falls into the category of a transgression. It's as though we are breaking into somewhere we are not meant to be (like a rave) and are invited into the mind of one of today's musical geniuses. Maybe we can even equivocate the experience to that of being a member of the paparazzi. Their whole mode of employment is based on breaking social codes and entering into the lives of everyday-people-turned-rock-stars. That's what this book is, a disruptive invitation to break into the life and mind of Lady Gaga, the person, not just the persona."

She started making friends and dating boys, while Jane wanted to go on playing make believe forever. Inevitably, the sisters found a gulf widening between them-Lily reveling in her newfound love, while Jane could only watch, frustrated, from the sidelines. How had her little sister managed to eclipse her? Then tragedy struck. But the story was not over. . . . Adele Griffin has crafted a spellbinding book, told in the alternating voices of two very different sisters dwelling on opposite sides of life and death, who are bravely trying to overcome the void and bring light to each other.

NEW YORK TIMES BESTSELLER • A "brilliant [and] entrancing" (The Guardian) journey into the hidden lives of fungi—the great connectors of the living world—and their astonishing and intimate roles in human life, with the power to heal our bodies, expand our minds, and help us address our most urgent environmental problems. "Grand and dizzying in how thoroughly it recalibrates our understanding of the natural world." —Ed Yong, author of *An Immense World*
ONE OF THE BEST BOOKS OF THE YEAR—Time, BBC Science Focus, The Daily Mail, Geographical, The Times, The Telegraph, New Statesman, London Evening Standard, Science Friday
When we think of fungi, we likely think of mushrooms. But mushrooms are only fruiting bodies, analogous to apples on a tree. Most fungi live out of sight, yet make up a massively diverse kingdom of organisms that supports and sustains nearly all living systems. Fungi provide a key to understanding the planet on which we live, and the ways we think, feel, and behave. In the first edition of this mind-bending book, Sheldrake introduced us to this mysterious but massively diverse kingdom of life. This exquisitely designed volume, abridged from the original, features more than one hundred full-color images that bring the spectacular variety, strangeness, and beauty of fungi to life as never before. Fungi throw our concepts of individuality and even intelligence into question. They are metabolic masters, earth makers, and key players in most of life's processes. They can change our minds, heal our bodies, and even help us remediate environmental disaster. By examining fungi on their own terms, Sheldrake reveals how these extraordinary organisms—and our relationships with them—are changing our understanding of how life works. Critical and theoretical essays by a long-time participant in the Art & Language movement.

These essays by art historian and critic Charles Harrison are based on the premise that making art and talking about art are related enterprises. They are written from the point of

view of Art & Language, the artistic movement based in England—and briefly in the United States—with which Harrison has been associated for thirty years. Harrison uses the work of Art & Language as a central case study to discuss developments in art from the 1950s through the 1980s. According to Harrison, the strongest motivation for writing about art is that it brings us closer to that which is other than ourselves. In seeing how a work is done, we learn about its achieved identity: we see, for example, that a drip on a Pollock is integral to its technical character, whereas a drip on a Mondrian would not be. Throughout the book, Harrison uses specific examples to address a range of questions about the history, theory, and making of modern art—questions about the conditions of its making and the nature of its public, about the problems and priorities of criticism, and about the relations between interpretation and judgment.

The Harlem Renaissance was an unprecedented period of vitality in the American Arts. Defined as the years between 1910 and 1927, it was the time when Harlem came alive with theater, drama, sports, dance and politics. Looking at events as diverse as the prizefight between Jack Johnson and Jim 'White Hope' Jeffries, the choreography of Aida Walker and Ethel Waters, the writing of Zora Neale Hurston and the musicals of the period, Krasner paints a vibrant portrait of those years. This was the time when the residents of northern Manhattan were leading their downtown counterparts at the vanguard of artistic ferment while at the same time playing a pivotal role in the evolution of Black nationalism. This is a thrilling piece of work by an author who has been working towards this major opus for years now. It will become a classic that will stay on the American history and theater shelves for years to come.

A funny, captivating tale complete with heart-warming photographs, *Skinny the Cat and the Magic of Kindness* will take its place with those beloved animal stories that have changed our lives forever.

Now available: *Nudge: The Final Edition* The original edition of the multimillion-copy *New York Times* bestseller by the winner of the Nobel Prize in Economics, Richard H. Thaler, and Cass R. Sunstein: a revelatory look at how we make decisions—for fans of Malcolm Gladwell's *Blink*, Charles Duhigg's *The Power of Habit*, James Clear's *Atomic Habits*, and Daniel Kahneman's *Thinking, Fast and Slow* Named a Best Book of the Year by *The Economist* and the *Financial Times* Every day we make choices—about what to buy or eat, about financial investments or our children's health and education, even about the causes we champion or the planet itself. Unfortunately, we often choose poorly. *Nudge* is about how we make these choices and how we can make better ones. Using dozens of eye-opening examples and drawing on decades of behavioral science research, Nobel Prize winner Richard H. Thaler and Harvard Law School professor Cass R. Sunstein show that no choice is ever presented to us in a neutral way, and that we are all susceptible to biases that can lead us to make bad decisions. But by knowing how people think, we can use sensible "choice architecture" to nudge people toward the best decisions for ourselves, our families, and our society, without restricting our freedom of choice.

How statistical data is used, misused, and abused every day to fool us: "A very entertaining book about a very serious problem." —Robert J. Shiller, winner of the Nobel Prize in Economics and author of *Irrational Exuberance* Did you know that baseball players whose names begin with "D" are more likely to die young? That Asian Americans are most susceptible to heart attacks on the fourth day of the month? That drinking a full pot of coffee every morning adds years to your life, but one cup a day increases your pancreatic cancer risk? These "facts" have been argued with a straight face by credentialed researchers and backed up with reams of data and convincing statistics. As Nobel Prize – winning economist Ronald Coase cynically observed, "If you torture data long enough, it will confess." Lying with statistics is a time-honored con. In *Standard Deviations*, economics professor Gary Smith walks us through the various tricks and traps that people use to back up their own

crackpot theories. Sometimes, the unscrupulous deliberately try to mislead us. Other times, the well-intentioned are blissfully unaware of the mischief they are committing. Today, data is so plentiful that researchers spend precious little time distinguishing between good, meaningful indicators and total rubbish. Not only do others use data to fool us, we fool ourselves. Drawing on breakthrough research in behavioral economics and using clear examples, *Standard Deviations* demystifies the science behind statistics and makes it easy to spot the fraud all around us. "An entertaining primer . . . packed with figures, tables, graphs and ludicrous examples from people who know better (academics, scientists) and those who don't (political candidates, advertisers)." —Kirkus Reviews (starred review)
