Today's moviegoers and critics generally  
consider some Hollywood products--even some  
blockbusters--to be legitimate works of art. But  
during the first half century of motion pictures  
very few Americans would have thought to call  
an American movie "art." Up through the 1950s,  
American movies were regarded as a form of  
popular, even lower-class, entertainment. By the  
1960s and 1970s, however, viewers were regularly  
judging Hollywood films by artistic criteria  
previously applied only to high art forms. In  
Hollywood Highbrow, Shyon Baumann for the  
first time tells how social and cultural forces  
radically changed the public's perceptions of  
American movies just as those forces were  
radically changing the movies themselves. The  
development in the United States of an  
appreciation of film as an art was, Baumann  
shows, the product of large changes in  
Hollywood and American society as a whole.  
With the postwar rise of television, American

movie audiences shrank dramatically and  
Hollywood responded by appealing to richer and  
more educated viewers. Around the same time,  
European ideas about the director as artist, an  
easing of censorship, and the development of art-  
house cinemas, film festivals, and the academic  
field of film studies encouraged the idea that  
some American movies--and not just European  
ones--deserved to be considered art.

Ford Pick-Ups Haynes Publishing  
Affective Health and Masculinities in South Africa explores how different masculinities modulate substance use, interpersonal violence, suicidality, and AIDS as well as recovery cross-culturally. With a focus on three male protagonists living in very distinct urban areas of Cape Town, this comparative ethnography shows that men's struggles to become invulnerable increase vulnerability. Through an analysis of masculinities as social assemblages, the study shows how affective health problems are tied to modern individualism rather than African 'tradition' that has become a cliché in Eurocentric gender studies. Affective health is conceptualized as a balancing act between autonomy and connectivity that after colonialism and apartheid has become compromised through the imperative of self-reliance. This book provides a rare perspective on young men's vulnerability in everyday life that may affect the reader and spark discussion about how masculinities in relationships shape physical and psychological health. Moreover, it shows how men change in the face of distress in ways that may look different than global health and gender-transformative approaches envision. Thick descriptions of actual events over the life course make the study accessible to both graduate and undergraduate students in the social sciences. Contributing to current debates on mental health and masculinity, this volume will be of interest to scholars from various disciplines including anthropology, gender studies, African studies, psychology, and global health.
