The powerful, refreshingly honest, first-hand account of a childhood spent in the Care system. At the age of nine, Hope Daniels walked into Stoke Newington Police Station with her little brothers and asked to be taken into care. Home life was intolerable: both of Hope's parents were alcoholics and her mum was a prostitute. The year was 1983. As London emerged into a new era of wealth and opportunity, the Daniels children lived in desperate poverty, neglected and barely nourished.

Hounded by vigilante neighbours and vulnerable to the drunken behaviour of her parents' friends, Hope had to draw on her inner strength. Hackney Child is Hope's gripping story of physical and emotional survival — and the lifeline given to her by the support of professionals working in the care system. Despite all the challenges she faced, Hope never lost compassion for her parents. Her experiences make essential reading and show that, with the right help, the least fortunate children have the potential not only to recover but to thrive. Data is arriving faster than you can process it and the overall volumes keep growing at a rate that keeps you awake at night. Hadoop can help you tame the data beast. Effective use of Hadoop however requires a mixture of programming, design, and system administration skills. "Hadoop Beginner's Guide" removes the mystery from Hadoop, presenting Hadoop and related technologies with a focus on building working systems and getting the job done, using cloud services to do so when it makes sense. From basic concepts and initial setup through developing applications and keeping the system running as the data grows, the book gives the understanding needed to effectively use Hadoop to solve real world problems. Starting with the basics of installing and configuring Hadoop, the book explains how to develop applications, maintain the system, and how to use additional products to integrate with other systems. While learning different ways to develop applications to run on Hadoop the book also covers tools such as Hive, Sqoop, and Flume that show how Hadoop can be integrated with relational databases and log collection. In addition to examples on Hadoop clusters on Ubuntu uses of cloud services such as Amazon, EC2 and Elastic MapReduce are covered.

The book presents research work on face recognition using edge information as features for face recognition with ICA algorithms. The independent components are extracted from edge information. These independent components are used with classifiers to match the facial images for recognition purpose. In their study, authors have explored Canny and LOG edge detectors as standard edge detection methods. Oriented Laplacian of Gaussian (OLOG) method is explored to extract the edge information with different orientations of Laplacian pyramid. Multiscale wavelet model for edge detection is also proposed to extract edge information. The book provides insights for advance research work in the area of image processing and biometrics.

"Hafiz--a quarry of imagery in which poets of all ages might mine." - Ralph Waldo Emerson Hafiz was born at Shiraz, in Persia, some time after 1320, and died there in 1389. He is, then, an almost exact contemporary of Chaucer. His standing in Persian literature ranks him with Shakespeare and Goethe. A Sufi, Hafiz lived in troubled times. Cities like Shiraz fell prey to the ambitions of one marauding prince after another and knew little peace. The nomads of Central Asia finally overthrew the rule of these princes, and led to the establishment of the succeeding Timurid Dynasty. It is of utmost literary interest that a poet who has remained immensely popular and most frequently quoted in his own land should, for the universality and grace of his wisdom and wit, be known outside the land of his birth as he used to be, the subject of veneration among literati both in Europe and the United States. The time for revival of interest in a poet of such cosmopolitan appeal is overdue. His poems celebrate the love, wine, and the fellowship of all creatures. This volume, first published in 1952, brings back into print at last the renderings, the most beautiful and faithful in English, of this greatest of Persian writers.
