"This sobering description of many computer-related failures throughout our world deflates the hype and hubris of the industry. Peter Neumann analyzes the failure modes, recommends sequences for prevention and ends his unique book with some broadening reflections on the future." —Ralph Nader, Consumer Advocate This book is much more than a collection of computer mishaps; it is a serious, technically oriented book written by one of the world's leading experts on computer risks. The book summarizes many real events involving computer technologies and the people who depend on those technologies, with widely ranging causes and effects. It considers problems attributable to hardware, software, people, and natural causes. Examples include disasters (such as the Black Hawk helicopter and Iranian Airbus shootdowns, the Exxon Valdez, and various transportation accidents); malicious hacker attacks; outages of telephone systems and computer networks; financial losses; and many other strange happenstances (squirrels downing power grids, and April Fool's Day pranks). Computer-Related Risks addresses problems involving reliability, safety, security, privacy, and human well-being. It includes analyses of why these cases happened and discussions of what might be done to avoid recurrences of similar events. It is readable by technologists as well as by people merely interested in the uses and limits of technology. It is must reading for anyone with even a remote involvement with computers and communications—which today means almost everyone. Computer-Related Risks: Presents comprehensive coverage of many different types of risks Provides an essential system-oriented perspective Shows how technology can affect your life—whether you like it or not!

As a meaningful manifestation of how institutionalized the discipline has become, the new Handbook of Translation Studies is most welcome. The HTS aims at disseminating knowledge about translation and interpreting to a relatively broad audience: not only students who often adamantly prefer user-friendliness, researchers and lecturers in Translation Studies, Translation & Interpreting professionals; but also scholars, experts and professionals from other disciplines (among which linguistics, sociology, history, psychology). Moreover, the HTS is the first handbook with this scope in Translation Studies that has both a print edition and an online version. The HTS is variously searchable: by article, by author, by subject. Another benefit is the interconnection with the selection and organization principles of the online Translation Studies Bibliography (TSB). Many items in the reference lists are hyperlinked to the TSB, where the user can find an abstract of a publication. All articles are written by specialists in the different subfields and are peer-reviewed

This book chronicles the divergent growth trends in car production in Belgium and Spain. It delves into how European integration, high wages, and the demise of GM and Ford led to plant closings in Belgium. Next, it investigates how lower wages and the expansion strategies of Western European automakers stimulated expansion in the Spanish auto industry. Finally, it offers three alternate scenarios regarding how further EU expansion and Brexit may potentially reshape the geographic footprint of European car production over the next ten years. In sum, this book utilizes history to help expand the knowledge of scholars and policymakers regarding how European integration and Brexit may impact future auto industry investment for all EU nations.
