This book, the first in Evro's  
new Formula 1 Greats series,  
covers one of the most revered  
Formula 1 cars ever made.  
Introduced in 1970, the wedge-  
shaped Lotus 72 competed for  
six seasons, winning 20 World  
Championship Grands Prix, two  
Drivers' titles (for Jochen  
Rindt in 1970 and Emerson  
Fittipaldi in 1972) and three  
Constructors' titles (in 1970,  
1972 and 1973), racing first in  
Lotus's evocative red, white

and gold livery, then the equally eye-catching black and gold of the John Player Special period. Pete Lyons, Autosport's renowned Formula 1 reporter for part of the Lotus 72 era, explores the car's entire race-by-race career in his insightful commentary accompanying a magnificent array of more than 300 photos. The 1970 season: after troubled early development, the 72 finally took over from the long-serving 49, its four consecutive race wins enough to secure the World Championship for Jochen Rindt, posthumously after his death during practice for the Italian Grand Prix. The 1971 season: with promising youngster Emerson Fittipaldi elevated to team leader after Rindt's death, great things were expected of the 72's second season but it proved to be winless. The 1972 season: now in black and gold John Player livery, the 72 became far more competitive and Fittipaldi's four Grand Prix victories made him World Champion. The 1973 season: Ronnie 'SuperSwede' Peterson joined Fittipaldi to form a dream team and together they won seven races, but because Lotus's spoils were divided between the two drivers Jackie Stewart was able to come through to become World Champion. The 1974 season: still the 72 soldiered on, now as the fall-back car after its successor, the 76, failed to deliver; partnered by Jacky Ickx, Peterson won three Grands Prix. The 1975 season: well beyond its sell-by date, the 72 did a final season but by now it was far from effective, with Ickx's second place in the tragic Spanish Grand Prix its best result.

The use of natural fibres as reinforcements in composites has grown in importance in recent years. Natural Fibre Composites summarises the wealth of significant recent research in this area. Chapters in part one introduce and explore the structure, properties, processing, and applications of natural fibre reinforcements, including those made from wood and cellulosic fibres. Part two describes and illustrates the processing of natural fibre composites. Chapters discuss ethical practices in the processing of green composites, manufacturing methods and compression and injection molding techniques for natural fibre composites, and thermoset matrix natural fibre-reinforced composites. Part three highlights and interprets the testing and properties of natural fibre composites including, non-destructive and high strain rate testing. The performance of natural fibre composites is examined under dynamic loading, the response of natural fibre composites to impact damage is appraised, and the response of natural fibre composites in a

This book examines the dramatic increase in automotive assembly plants in the former Socialist Central European (CE) nations of Czechia, East Germany,

---

Hungary, Poland, and Slovakia from 1989 onwards. Enticed by relatively lower-wage labour and significant government incentives, the world's largest automakers have launched more than 20 passenger car assembly complexes in CE nations, with production accelerating dramatically since 2001. As a result, the annual passenger car production in Western Europe declined by more than 20% between 2001 and 2015, and alternatively in the CEE it increased by nearly 170% during this period. Drawing on case studies of 25 current and former foreign-run assembly plants, the author presents a rare historical account of automotive foreign assembly plants in the CE following this dramatic geographic shift. This book will expand the knowledge of policy-makers in Europe in relation to their pursuits of FDI and will be of great interest to scholars and students of business, economic history, political science, and development.
