Forensic Anthropology Training
Manual Ohio State University Press
"Advances in technology, research,
and evidence-based practice have led
to improvements in the care of
patients receiving radiation therapy.
The knowledge and expertise required
by nurses must focus on the needs of
patients who come into their care at
any point across the trajectory of the
cancer journey. Nurses may work
with patients at varying stages of the
radiation therapy process and in a
wide range of settings. Regardless,

however, the need to be knowledgeable
about the symptoms and side effects
associated with this treatment is
essential for nurses caring for this
patient population. The Oncology
Nursing Society has published the fifth
edition of Manual for Radiation
Oncology Nursing Practice and
Education to support nurses who care
for patients who will receive, are
receiving, or have received radiation
therapy. The fifth edition features
significant updates and changes to the
content to reflect advances in
technology, treatment options, and
symptom manage-ment. New sections
have been added based on input from
radiation oncology nurses or as a
result of changes in treatment options,
the needs of specific patient
populations, and observations from
clinical practice. New topics include
patients with cognitive changes and
dementia; general distress and coping;
patients with mental illness; special
populations, such as women who are
pregnant, ado-lescents, and young
adults; special needs related to late
effects of treatment and cardiac
toxicities; and treatment modalities,
includ-ing cobalt therapy and
immunotherapy. This manual serves as
an essential resource for individual
nurses new to working in a radiation
therapy set-ting as well as to nurses
wanting to advance their knowledge in
radiation biology and protection,
diverse radiation therapy modalities,
combination treatments, site- or
disease-specific concerns, symptom
management, special populations, and
care during transition points. Additionally, this manual can be a
resource to advanced practice
clinicians, educators, and
administrators, with a focus on support
for nursing staff seeking the education
and skills required to care for patients
receiving radiation therapy and their
families"--

CiteSpace is a freely available computer
program written in Java for visualizing and
analyzing literature of a scientific domain.
A knowledge domain is broadly defined in
order to capture the notion of a logically
and cohesively organized body of

knowledge. It may range from specific topics such as post-traumatic stress disorder to fields of study lacking clear-cut boundaries, such as research on terrorism or regenerative medicine. CiteSpace takes bibliographic information, especially citation information from the Web of Science, and generates interactive visualizations. Users can explore various patterns and trends uncovered from scientific publications, and develop a good understanding of scientific literature much more efficiently than they would from an unguided search through literature. The full text of many scientific publications can be accessed with a single click through the interactive visualization in CiteSpace. At the end of a session, CiteSpace can generate a summary report to summarize key information about the literature analyzed. This book is a practical guide not only on how to operate the tool but also on why the tool is designed and what implications of various patterns that require special attention. This book is written with a minimum amount of jargon. It uses everyday language to explain what people may learn from the writings of scholars of all kinds.

GoPro Taylor & Francis

A true pioneer and respected elder in ecological recovery and sustainability shares effective solutions he has designed and implemented. A stand-out from the sea of despairing messages about climate change, well-known sustainability elder John Todd,

who has taught, mentored, and inspired such well-known names in the field as Janine Benyus, Bill McKibben, and Paul Hawken, chronicles the different ecological interventions he has created over the course of his career. Each chapter offers a workable engineering solution to an existing environmental problem: healing the aftermath of mountain-top removal and valley-fill coal mining in Appalachia, using windmills and injections of bacteria to restore the health of a polluted New England pond, working with community members in a South African village to protect an important river. A mix of both success stories and concrete suggestions for solutions to tackle as yet unresolved issues, Todd's narrative provides an important addition to the conversation about specific ways we can address the planetary crisis. Eighty-five color photos and images illustrate Todd's concepts. This is a refreshingly hopeful, proactive book and also a personal story that covers a known practitioner's groundbreaking career.

Magic or spycraft? In 1953, against the backdrop of the Cold War, the CIA initiated a top-secret program, code-named MKULTRA, to counter Soviet mind-control and interrogation techniques. Realizing that clandestine officers might need to covertly deploy newly developed pills, potions, and powders against the adversary, the CIA hired America's most famous magician, John Mulholland, to write two manuals on sleight of hand and undercover communication techniques. In 1973, virtually all documents related to MKULTRA were destroyed.

Mulholland's manuals were thought to be among them—until a single surviving copy of each, complete with illustrations, was recently discovered in the agency's archives. The manuals reprinted in this work represent the only known complete copy of Mulholland's instructions for CIA officers on the magician's art of deception and secret communications.
