Legionnaires' disease, a
pneumonia caused by the

Legionella bacterium, is the leading cause of reported waterborne disease outbreaks in the United States. Legionella occur naturally in water from many different environmental sources, but grow rapidly in the warm, stagnant conditions that can be found in engineered water systems such as cooling towers, building plumbing, and hot tubs. Humans are primarily exposed to Legionella through inhalation of contaminated aerosols into the respiratory system. Legionnaires' disease can be fatal, with between 3 and 33 percent of Legionella infections leading to death, and studies show the

incidence of Legionnaires' disease in the United States increased five-fold from 2000 to 2017. Management of Legionella in Water Systems reviews the state of science on Legionella contamination of water systems, specifically the ecology and diagnosis. This report explores the process of transmission via water systems, quantification, prevention and control, and policy and training issues that affect the incidence of Legionnaires' disease. It also analyzes existing knowledge gaps and recommends research priorities moving forward. Oxygen Princeton University

A respected resource for decades, the Guide for the Care and Use of Laboratory Animals has been updated by a committee of experts, taking into consideration input from the scientific and laboratory animal communities and the public at large. The Guide incorporates new scientific information on common laboratory animals, including aquatic species, and includes extensive references. It is organized around major components of animal use: Key concepts of animal care and use. The Guide sets the

framework for the humane care and use of laboratory animals. Animal care and use program. The Guide discusses the concept of a broad Program of Animal Care and Use, including roles and responsibilities of the Institutional Official, Attending Veterinarian and the Institutional Animal Care and Use Committee. Animal environment, husbandry, and management. A chapter on this topic is now divided into sections on terrestrial and aquatic animals and provides recommendations for housing and environment, husbandry,

behavioral and population management, and more. Veterinary care. The Guide discusses veterinary care and the responsibilities of the Attending Veterinarian. It includes recommendations on animal procurement and transportation, preventive medicine (including animal biosecurity), and clinical care and management. The Guide addresses distress and pain recognition and relief, and issues surrounding euthanasia. Physical plant. The Guide identifies design issues, providing construction guidelines for functional areas;

considerations such as drainage, vibration and noise control, and environmental monitoring; and specialized facilities for animal housing and research needs. The Guide for the Care and Use of Laboratory Animals provides a framework for the judgments required in the management of animal facilities. This updated and expanded resource of proven value will be important to scientists and researchers, veterinarians, animal care personnel, facilities managers, institutional administrators, policy makers involved in research issues, and animal welfare advocates.

Schools and Health is a readable and well-organized book on comprehensive school health programs (CSHPs) for children in grades K-12. The book explores the needs of today's students and how

those needs can be met through CSHP design and development. The committee provides broad recommendations for CSHPs, with suggestions and guidelines for national, state, and local actions. The volume examines how communities can become involved, explores models for CSHPs, and identifies elements of successful programs. Topics include: The

history of and precedents for health programs in schools. The state of the art in physical education, health education, health services, mental health and pupil services, and nutrition and food services. Policies, finances, and other elements of CSHP infrastructure. Research and evaluation challenges. Schools and Health will be

important to policymakers in health and education, school administrators, school physicians and nurses, health educators, social scientists, child advocates, teachers, and parents.

The remarkable scientific story of how Earth became an oxygenated planet The air we breathe is twenty-one percent oxygen, an amount higher than on any

other known world. While we may take our air for granted, Earth was not always an oxygenated planet. How did it come to be this way? Donald Canfield covers this vast history, emphasizing its relationship to the evolution of life and the evolving chemistry of Earth. He guides readers through the various lines of scientific evidence, considers some of the wrong turns and dead ends along the way, and highlights the scientists and researchers who have made key discoveries in the field. Now with an incisive new preface by the author,

Oxygen takes readers on an astonishing journey of discovery, telling the story of how our planet became oxygenated.

Air service medical National Academies Press Individuals with disabilities, chronic conditions, and functional impairments need a range of services and supports to keep living

independently. However, there often is not a strong link between medical care provided in the home and the necessary social services and supports for independent living. Home health agencies and others are rising to the challenges of meeting the needs and demands of these populations to stay at home by exploring alternative models of care and payment approaches, the best use of their workforces, and technologies that can enhance independent living. All of these challenges and

opportunities lead to the consideration of how home health care fits into the future health care system overall. On September 30 and October 1, 2014, the Institute of Medicine and the National Research Council convened a public workshop on the future of home health care. The workshop brought together a spectrum of public and private stakeholders and thought leaders to improve understanding of the current role of Medicare home health care in supporting aging in place and in helping

high-risk, chronically ill, and disabled Americans receive health care in their communities. Through presentations and discussion, participants explored the evolving role of Medicare home health care in caring for Americans in the future, including how to integrate Medicare home health care into new models for the delivery of care and the future health care marketplace. The workshop also considered the key policy reforms and investments in workforces, technologies, and research

needed to leverage the value of home health care to support older Americans, and research priorities that can help clarify the value of home health care. This summary captures important points raised by the individual speakers and workshop participants.

Leading Through a Pandemic

The New York Times bestselling author of *Being Mortal* and *Complications* reveals the surprising power of the ordinary checklist. We live in a world of great and increasing complexity, where even the most expert professionals struggle to master the tasks they face. Longer training, ever more advanced technologies—neither seems to prevent grievous errors. But in a hopeful turn, acclaimed surgeon and writer Atul Gawande finds a remedy in the humblest and simplest of techniques: the checklist. First

introduced decades ago by the U.S. Air Force, checklists have enabled pilots to fly aircraft of mind-boggling sophistication. Now innovative checklists are being adopted in hospitals around the world, helping doctors and nurses respond to everything from flu epidemics to avalanches. Even in the immensely complex world of surgery, a simple ninety-second variant has cut the rate of fatalities by more than a third. In riveting stories, Gawande takes us from Austria, where an emergency checklist saved a drowning victim who had spent half an hour underwater, to Michigan, where a cleanliness checklist

in intensive care units virtually eliminated a type of deadly hospital infection. He explains how checklists actually work to prompt striking and immediate improvements. And he follows the checklist revolution into fields well beyond medicine, from disaster response to investment banking, skyscraper construction, and businesses of all kinds. An intellectual adventure in which lives are lost and saved and one simple idea makes a tremendous difference, *The Checklist Manifesto* is essential reading for anyone working to get things right.

—GOVERNOR ANDREW CUOMO Journey behind the front lines of the coronavirus pandemic with Northwell Health, New York's largest health system. What was it like at the epicenter, inside the health system that cared for more COVID-19 patients than

any other in the United States? *Leading Through a Pandemic: The Inside Story of Lessons Learned about Innovation, Leadership, and Humanity During the COVID-19 Crisis* takes readers inside Northwell Health, New York's largest health system. From the C-suite to the front lines, the book reports on groundwork that positioned Northwell as uniquely prepared for the pandemic. Two decades ago, Northwell leaders began preparing for disasters—floods, hurricanes, blackouts, viruses, and more based on the belief that "bad things will happen and we have to be ready." Following a course highly

unusual for an American health system, Northwell developed one of the most advanced non-government emergency response systems in the country. Northwell reached a point where leaders could confidently say "we are comfortable being uncomfortable in a crisis." But even with sustained preparation, the pandemic stands as a singularly humbling experience. Leading Through a Pandemic offers guidance on how hospitals and health systems throughout the country can prepare more effectively for the next viral threat. The book includes dramatic stories from the front

lines at the peak of the viral assault and lessons of what went well, and what did not. The authors draw upon the Northwell experience to prescribe changes in the health care system for next time. Beyond the obvious need for increased stockpiles of supplies and equipment is the far more challenging task of fundamentally changing the culture of American health care to embrace a more robust emergency response capability in hospitals and systems of all sizes across the nation. The book is a must read for health care professionals, policy-makers, journalists, and readers whose curiosity

demands a deeper dive into the surreal realm of the coronavirus pandemic. *Research Report* Lists citations with abstracts for aerospace related reports obtained from world wide sources and announces documents that have recently been entered into the NASA Scientific and Technical Information Database. *Health Devices Sourcebook* "Nurses play a vital role in improving the safety and quality of patient care -- not only in the hospital or ambulatory treatment facility, but also of community-based care and

the care performed by family members. Nurses need know what proven techniques and interventions they can use to enhance patient outcomes.
