As the culminating volume in the DCP3 series, volume 9 will provide an overview of DCP3 findings and methods, a summary of messages and substantive lessons to be taken from DCP3, and a further discussion of cross-cutting and synthesizing topics across the first eight volumes. The introductory chapters (1-3) in this volume take as their starting point the elements of the Essential Packages presented in the overview chapters of each volume. First, the chapter on intersectoral policy priorities for health includes fiscal and intersectoral policies and assembles a subset of the population policies and applies strict criteria for a low-income setting in order to propose a "highest-priority" essential package. Second, the chapter on packages of care and delivery platforms for universal health coverage (UHC) includes health sector interventions, primarily clinical and public health services, and uses the same approach to propose a highest priority package of interventions and policies that meet similar criteria, provides cost estimates, and describes a pathway to UHC.

Nanoparticles show very high mechanical properties as well as many remarkable physical properties. Attempts to make new materials with excellent properties by adding these particles to polymeric materials, composites, ceramics, alloys, etc., have been mostly discouraged. During experimentation with nanoparticles some negative effects on human health were found. Insufficient studies of these effects created wide range of opinions, from “nanoparticles are worse than asbestos” to “nanoparticles don’t affect human health at all.” This chapter discusses some physical, chemical, and biological aspects related to nanoparticles and nanomaterials. It explains why the public has to be cautious in using nanoparticles until definitive investigation results are obtained related to humans and the environment.

Internationally, the importance of coordinated efforts to protect both biodiversity and public health is increasingly being recognized. We address these ecosystem health services by focusing on some crucial human health–nature relations. We present examples of infectious diseases, food, medicine, nature experience, and invasive species and diseases. We also indicate how in Belgium a Community of Practice on Biodiversity and Public Health is emerging, in order to raise critical mass to deal with the challenges posed by these linkages.

**A Public Health Approach to Bullying Prevention** will serve as a practical, sustainable, cost-efficient strategy to tackle bullying. More importantly, it may be the best approach to providing legitimate and sustainable hope to our children at a time when bullying is becoming increasingly more difficult to tackle. This book presents a public health approach to bullying prevention in a comprehensive and deliberate manner. Formal public health strategies have been used to combat infectious disease epidemics, tobacco use, and motor vehicle injuries. When applied to bullying, public health strategies provide a scientific approach to community planning, the use of evidence-based programs, coalition development, and the ability to change the culture in a school and community to one that is positive and strong. This text will serve as invaluable resource to parents and professionals looking for advice on specific facets of school-based bullying.

Significant changes have taken place in the policy landscape surrounding cannabis legalization, production, and use. During the past 20 years, 25 states and the District of Columbia have legalized cannabis and/or cannabidiol (a component of cannabis) for medical conditions or retail sales at the state level and 4 states have legalized both the medical and recreational use of cannabis. These landmark changes in policy have impacted cannabis use patterns and perceived levels of risk. However, despite this changing landscape, evidence regarding the short- and long-term health effects of cannabis use remains elusive. While a myriad of studies have examined cannabis use in all its various forms, often these research conclusions are not appropriately synthesized, translated for, or communicated to policy makers, health care providers, state health officials, or other stakeholders who have been charged with influencing and enacting policies, procedures, and laws related to cannabis use. Unlike other controlled substances such as alcohol or tobacco, no accepted standards for safe use or appropriate dose are available to help guide individuals as they make choices regarding the issues of if, when, where, and how to use cannabis safely and, in regard to therapeutic uses, effectively. Shifting public sentiment, conflicting and impeded scientific research, and legislative battles have fueled the debate about what, if any, harms or benefits can be attributed to the use of cannabis or its derivatives, and this lack of aggregated knowledge has broad public health implications. The Health Effects of Cannabis and Cannabinoids provides a comprehensive review of scientific evidence related to the health effects and potential therapeutic benefits of cannabis. This report provides a research agenda—outlining gaps in current knowledge and opportunities for providing additional insight into these issues—that summarizes and prioritizes pressing research needs. *Disease Control Priorities, Third Edition (Volume 2)* World Bank Publications Based on careful analysis of burden of disease and the costs of interventions, this second edition of 'Disease Control Priorities in Developing Countries, 2nd edition' highlights achievable priorities; measures progress toward providing efficient, equitable care; promotes cost-effective interventions to targeted populations; and encourages integrated efforts to optimize health. Nearly 500 experts - scientists, epidemiologists, health economists, academicians, and public health practitioners - from around the world contributed to the data sources and methodologies, and identified challenges and priorities, resulting in this integrated, comprehensive reference volume on the state of health in developing countries.
