Emergency Management in Health Care Elsevier Health Sciences

This popular textbook provides a comprehensive but accessible coverage of health economic principles and applications. It provides an introduction for those with no previous knowledge of economics, but also more advanced material suitable for those with a background in economics. Now into its second edition, Barbara McPake and Charles Normand have incorporated developments in economic evaluation and economics of health systems from recent research and experience while retaining an accessible approach and style. The book starts with a section on basic economic principles as applied to health and health care, and goes on to discuss economic evaluation in health care, the economics of health systems and health care finance. Examples and illustrations are taken from a wide range of settings and world regions, reflecting the authors' belief that the same principles apply, and that it is useful to have some understanding of how different countries organise the health system. It provides an understanding of the performance of different health systems from the insurance based approaches in the United States to government funding that is common in Canada and most countries in Europe, and the mixed systems that operate in most low-income countries. This book is ideal for students in public health and related courses, for health care professionals and those studying health economics at a more advanced level.

Since publication of the fourth edition of this highly successful book, there have been a number of Government initiatives, reports and policies on how the health of children can best be protected and promoted. This revised fourth edition incorporates recent material on the National Service Framework, 'Every Child Matters', the public health report 'Choosing Health', and the Children Act. It has also been informed by new research on a variety of topics including Sure Start, obesity, Sudden Infant Death Syndrome (SIDS) and language acquisition. Health for all Children 4/e (revised) continues the themes of previous editions, in particular highlighting the growing evidence that behavioural problems and educational failure are not inevitable, and can be prevented. Thus the role of screening for developmental problems, while not ignored, is set in the context of what can be done to promote language development, reading, and enthusiasm for learning. Changes made to the fourth edition, and continued in this revised edition, include dealing with the health care needs of children of school age as well as pre-school children. It also outlines the needs of special groups of children, including those who are vulnerable or disabled and those living in unusual circumstances. The legislative framework is outlined and hallmarks of

good practice described. Promoting children's health is a key focus, with updated information on nutrition and injury prevention, and emphasis on the importance of parent education and support, language, and literacy skills, with a review of behavioural management programmes for parents. It also describes the duties laid on PCTs with regard to education and social services support. This established and successful book continues to be essential reading for all health professionals who work with children, whether in the community or at the receiving end of referrals. It will also provide vital background knowledge for those charged with the responsibility of planning, commissioning and monitoring. This revised fourth edition provides the most up to date evidence in a rapidly changing field.
