There has been a dramatic increase in the utilization of wireless technologies in healthcare systems as a consequence of the wireless ubiquitous and pervasive communications revolution. Emerging information and wireless communication technologies in health and healthcare have led to the creation of e-health systems, also known as e-healthcare, which have been drawing increasing attention in the public and have gained strong support from government agencies and various organizations. E-Healthcare Systems and Wireless Communications: Current and Future Challenges explores the developments and challenges associated with the successful deployment of e-healthcare systems. The book combines research efforts in different disciplines including pervasive wireless communications, wearable computing, context-awareness, sensor data fusion, artificial intelligence, neural networks, expert systems, databases,

and security. This work serves as a comprehensive reference for graduate students in bioengineering and also provides solutions for medical researchers who are faced with the challenge of designing and implementing a cost-effective pervasive and ubiquitous wireless communication system.

The HP Phenomenon tells the story of how Hewlett-Packard innovated and transformed itself six times while most of its competitors were unable to make even one significant transformation. It describes those transformations, how they started, how they prevailed, and how the challenges along the way were overcome—reinforcing David Packard's observation that "change and conflict are the only real constants." The book also details the philosophies, practices, and organizational principles that enabled this unprecedented sequence of innovations and transformations. In so doing, the authors capture the elusive "spirit of innovation" required to fuel growth and transformation in all companies: innovation that is customer-centered, contribution-driven, and growth-focused. The corporate ethos described in this book—with its emphasis on bottom-up innovation and sufficient flexibility to see results brought to the marketplace and brought alive inside the company—is radically different from current management "best practice." Thus, while primarily a history of Hewlett-Packard, The HP Phenomenon also holds profound lessons for engineers, managers, and organizational leaders hoping to transform their own organizations. "At last! The 'HP Way, that most famous of all corporate philosophies, has taken on an almost mythical status. But how did it really work? How did it make Hewlett-Packard the fastest growing, most admired, large company of the last half-century? Now, two important figures in HP's history, Chuck House and Raymond Price, have finally given us the whole story. The HP Phenomenon is the book we've been waiting for: the definitive treatise on how Bill and Dave ran their legendary company, day to day and year to year. It should be a core text for generations of young entrepreneurs and managers, a roadmap to building a great enterprise."—Michael S. Health care in the twenty-first century requires intensive use of technology in order to acquire and analyze data and manage and disseminate information. No area is more data intensive than the neurointensive care unit. Despite the massive amount of data, however, providers often lack interpretable and actionable information. This book reviews the concepts underlying the emerging field of neurocritical care informatics, with a focus on integrated data acquisition, linear and nonlinear processing, and innovative visualization in the ICU. Subjects addressed in individual chapters are thus wide ranging and encompassing, for example, multimodal and continuous EEG monitoring and data integration, display of data in the ICU, patient-centered clinical decision support, optimization of collaboration and workflow, and progress towards an "integrated medical environment". All of the nine chapters have been written by international thought leaders in the field.

A comprehensive book of “need-to-know” insights for busy leaders Being a great leader means getting the fundamentals right. It also means consistently doing the “little things” that make a positive difference in the lives of employees, customers, and other stakeholders. The Busy Leader’s Handbook: How to Lead People and Places That Thrive is a practical, easy-to-use book filled with gentle reminders of what we should be doing every day—especially when work is at its most intense. The Handbook is packed with proven best practices, tools, tips, and tactics for engaging employees, revitalizing cultures, delighting customers, and building high-performance companies. Short, succinct, and accessible, each chapter is “stand-alone,” offering helpful advice for meeting common business challenges. Plus, the strategies, approaches, and tactics are designed to be put into action immediately. Best-selling author, businessman, visionary, and entrepreneur Quint Studer draws on his 30-plus years of experience in helping organizations of all sizes and leaders at every level reach peak performance. Comprehensive in scope, his book overflows with insights and practical advice to help you make smart leadership decisions. For example: Why putting the right foundational structures in place early on creates clarity and heads off problems that cause businesses to struggle and fail The importance of followership: why being a good leader requires that you first be a good follower Why we tend to run from self-disruption and a sense of being unsettled (and how to learn to embrace them instead) Why leaders should seek consent, not consensus How to engage employees and create a positive workplace culture How to help employees find meaning and purpose in their work How to conduct difficult conversations and resolve conflicts—and why having these skills (or not) can make or break you as a leader Advice for attracting and hiring the best talent, retaining them over time, and dealing with the low performers who drive them away Why mentoring is so powerful and how to encourage it inside your company Tips and tactics for seeing the world through your customer’s eyes How to reduce customer anxiety (and encourage them to buy) with the right words at the right times for the right reasons The Busy Leader’s Handbook functions as a desk reference and pocket guide for anyone in a leadership position. It’s also a great training tool for onboarding new leaders. Whether you work for a start-up, a small or mid-size business, or a large corporation, this book will change how you think, inspire you to do your job better—and help your organization thrive.

The Future of Home Health Care Routledge

Innovation in medical technology generates a remarkable supply of new drugs, devices, and diagnostics that improve health, reduce risks, and extend life. But these technologies are too often used on the wrong patient, in the wrong setting, or at an unaffordable price. The only way to moderate the growth in health care costs without undermining the dynamic of medical innovation is to improve the process of assessing, pricing, prescribing, and using new technologies. Purchasing Medical Innovation analyzes the contemporary revolution in the purchasing of health care technology, with a focus on the roles of the Food and Drug Administration (FDA), Medicare and private health insurers, physicians and hospitals, and consumers themselves. The FDA is more thoroughly assessing product performance under real-world conditions as well as in laboratory settings, accelerating the path to market for breakthroughs while imposing use controls on risky products. Insurers are improving their criteria for coverage and designing payment methods that reward efficiency in the selection of new treatments. Hospitals are aligning adoption of complex supplies and equipment more closely with physicians’ preferences for the best treatment for their patients. Consumers are becoming more engaged and financially accountable for their health care choices. This book describes both the strengths and deficiencies of the current system of purchasing and highlights opportunities for buyers, sellers, and users to help improve the value of medical technology: better outcomes at lower cost.

Cumulative List of Organizations Described in Section 170 (c) of the Internal Revenue Code of 1986 Plunkett Research, Ltd.

Individuals with disabilities, chronic conditions, and functional impairments need a range of services and supports to keep living independently. However, there often is not a strong link between medical care provided in the home and the necessary social services and supports for independent living. Home health agencies and others are rising to the challenges of meeting the needs and demands of these populations to stay at home by exploring alternative models of care and payment approaches, the best use of their workforces, and technologies that can enhance independent living. All of these challenges and opportunities lead to the consideration of how home health care fits into the future health care system overall. On September 30 and October 1, 2014, the Institute of Medicine and the National Research Council convened a public workshop on the future of home health care. The workshop brought together a spectrum of public and private stakeholders and thought leaders to improve understanding of the current role of Medicare home health care in supporting aging in place and in helping high-risk, chronically ill, and disabled Americans receive health care in their communities. Through presentations and discussion, participants explored the evolving role of Medicare home health care in caring for Americans in the future, including how to integrate Medicare home health care into new models for the delivery of care and the future health care marketplace. The workshop also considered the key policy reforms and investments in workforces, technologies, and research needed to leverage the value of home health care to support older Americans, and research priorities that can help clarify the value of home health care. This summary captures important points raised by the individual speakers and workshop participants.
