Automotive Air Conditioning and Heating Service Manual, 1966-72 Haynes Publishing  
This manual prepares HVAC-R technicians with the knowledge needed to respond professionally to current and future environmental challenges. It begins with discussion of HVAC fundamentals and core topics, such as: refrigerant chemistry, oils, ozone depletion, global warming, and the Montreal protocol. Subsequent sections, each conveniently organized around a specific certification type, allow readers to delve into specific technical information, regulations, and procedures pertaining to small appliances; recovery, recycling, and reclaim; and chillers. Relevant forms, logs, and reports, plus a comprehensive glossary, are also included in handy appendices. In a field

where technology change is the norm, and regulations are increasingly requiring HVAC-R technicians to adopt new procedures in order to contend with environmental problems, this manual serves as both an effective test preparation guide and an indispensable professional field reference.

handbook examines all aspects of variable air volume (VAV) systems for heating, ventilating and air conditioning systems. The author has incorporated his own hands-on expertise into this concise presentation which guides the reader in applying the "tricks of the trade" for reducing installation and operating costs while increasing occupant comfort. Variable air volume applications are examined in detail for dual duct, multizone, terminal bypass fan powered, and other commonly used types of systems. You will learn effective methods of varying fan volume, calibrating pneumatic and electronic boxes, and applying the various types of VAV control systems. A wide range of topics are addressed, including temperature, pneumatics, direct digital control, coil controls, morning warmup and night heating, VAV point list, fan tracking, fume hood applications, and conversion of existing systems to VAV. A comprehensive chapter on cost estimating has been added to this second edition.
