There are hundreds--if not thousands--of techniques used to compromise both Windows and Unix-based systems. Malicious code and new exploit scripts are released on a daily basis, and each evolution becomes more and more sophisticated. Keeping up with the myriad of systems used by hackers in the wild is a formidable task, and scrambling to patch each potential vulnerability or address each new attack one-by-one is a bit like emptying the Atlantic with paper cup.If you're a network administrator, the pressure is on you to defend your systems from attack. But short of devoting your life to becoming a security expert, what can you do to ensure the safety of your mission critical systems? Where do you start?Using the steps laid out by professional security analysts and consultants to identify and assess risks, Network Security Assessment offers an efficient testing model that an administrator can adopt, refine, and reuse to create proactive defensive strategies to protect their systems from the threats that are out there, as well as those still being developed.This thorough and insightful guide covers offensive technologies by grouping and analyzing them at a higher level--from both an offensive and defensive standpoint--helping administrators design and deploy networks that are immune to offensive exploits, tools, and scripts. Network administrators who need to develop and implement a security assessment program will find everything they're looking for--a proven, expert-tested methodology on which to base their own comprehensive program--in this time-saving new book.

Learn how to use Profile Manager, a feature included in OS X Lion Server, to configure and remotely manage iOS devices (including iPad, iPhone, and iPod touch) and Macs running Lion. With this eBook, you will learn how to use Profile Manager's web-based tools to configure user settings for services such as Mail, Calendar, VPN, and Wi-Fi; define passcode settings to prevent unauthorized access to data stored on your users' devices; and remotely wipe devices if they go missing. The Profile Manager uses the Apple Push Notification Service (APNS), so you can immediately push configuration changes to your devices, as long as they have some kind of network connectivity. Why do all the work yourself? Show your users how easy it is for them to use the self-service web portal to download and install the configuration profiles you've carefully crafted for them, and how to remotely lock or wipe their own devices without your intervention. This eBook includes the knowledge you need to configure your Lion Server to be an Open Directory master, use an appropriate SSL certificate, provide Profile Manager services, and perform basic troubleshooting.
