This book offers a case-study approach to stakeholder theory that moves beyond theoretical analysis to the applied. As stakeholder theory has moved into the mainstream of management thinking in business ethics and a number of the management disciplines, there is an increasing need to explore the subtleties of stakeholder engagement via examples from practice. The case studies in this volume explore a number of aspects of the idea of stakeholder engagement, via the method of clinical case studies. Edited by leading scholars in the field of business ethics and stakeholder theory, this text affords a solid grounding in theory, brought to new levels of applied understanding of stakeholder engagement.

This book is an attempt to inform the debate that is already taking place between Europe's policy-makers, looking at a series of case studies that illustrate the different aspects of patient mobility within the European Union and how Europe's health systems have responded to them. Most of the case studies presented in this book have been analysed within a project funded by the European Union's Sixth Framework Programme - Europe for Patients (e4p).

This book comprehensively discusses the background to the passing of India's revolutionary Mental Healthcare Act, 2017, offering a detailed description of the Act itself and a rigorous analysis in the context of the CRPD and the World Health Organization (WHO) standards for mental health law. It examines the fine balance, between complying with the CRPD while still delivering practical, humane, and implementable legislation. It explores how this legislation was shaped by the WHO standards and provides insights into areas where the Indian legislators deviated from these guidelines and why. Taking India as an example, it highlights what is possible in other low- and middle-income countries. Further it covers key issues in mental health, identifying potential competing interests and exploring the difficulties and limitations of international guidelines. The book is a valuable resource for psychiatrists, nurses, social workers, non-governmental organizations and all mental healthcare workers in India and anyone studying human rights law.

This report examines women's political representation in Europe. Although the overall representation of women in European Parliaments (including the Commonwealth of Independent States' nations) stands at approximately 18 percent, the differences among the many countries are staggering; from a low of three percent in Kyrgyzstan to a high of 45 percent in Sweden. In all of Europe, only eight countries have legislated quotas at the national or sub-national level. In 27 countries, political parties have voluntarily adopted some form of quotas. Gender quotas are increasingly viewed as an important policy measure for boosting women's access to decision-making bodies throughout the world. The proponents of quotas in many European countries face an unusual dilemma compared to other regions -- rejection and scepticism based on previous experience with quotas. In many communist states of the 20th Century, quotas

were employed as a way of paying lip-service to equality declarations made by state-sponsored socialism. Thus in several, modern European democracies of the 21st Century, quotas are not regarded as positive measures but rather negative reminders of non-democratic practices. This report looks in depth at this particular impediment and compares strategies and ways of overcoming the stereotypes. There are 11 country case studies included in the report: Belgium, Bosnia and Herzegovina, Croatia, Estonia, Hungary, Lithuania, Macedonia, Norway, Poland, Serbia and Montenegro and Slovenia.

In 2015, the New Democratic Party won an unprecedented victory in Alberta. Unseating the Progressive Conservatives -- who had won every provincial election since 1971 -- they formed an NDP government for the first time in the history of the province. Orange Chinook is the first scholarly analysis of this election. It examines the legacy of the Progressive Conservative dynasty, the PC and NDP campaigns, polling, and online politics, providing context and setting the stage. It highlights the importance of Alberta's energy sector and how it relates to provincial politics with focus on the oil sands, the carbon tax, and pipelines. Examining the NDP in power, Orange Chinook draws on Indigenous, urban, and rural perspectives to explore the transition process and government finances and politics. It explores the governing style of premier Rachel Notley, paying special attention to her response to the 2016 For McMurray wildfire and to the role of women in politics. Orange Chinook brings together Alberta's top political watchers in this fascinating, multi-faceted analysis.

The Handbook of Easy Languages in Europe describes what Easy Language is and how it is used in European countries. It demonstrates the great diversity of actors, instruments and outcomes related to Easy Language throughout Europe. All people, despite their limitations, have an equal right to information, inclusion, and social participation. This results in requirements for understandable language. The notion of Easy Language refers to modified forms of standard languages that aim to facilitate reading and language comprehension. This handbook describes the historical background, the principles and the practices of Easy Language in 21 European countries. Its topics include terminological definitions, legal status, stakeholders, target groups, guidelines, practical outcomes, education, research, and a reflection on future perspectives related to Easy Language in each country. Written in an academic yet interesting and understandable style, this Handbook of Easy Languages in Europe aims to find a wide audience.

Numerous pathogens affect animal health and wellbeing and production efficiency. These pathogens also have a considerable impact on social economics, food safety and security, and human health. Infectious diseases that originate from both domesticated animals and wildlife represent one of the greatest threats to human health. Recent studies show that domesticated species harbor approximately 84 times more zoonotic viruses than wild species. Eight of the top 10 mammalian species with the highest number of zoonotic viruses are domestic, such as pigs, cattle, and horses. Many animal parasites are also zoonotic, constituting an additional burden on human health. Furthermore, the rapid emergence and spread of drug-resistant pathogen strains pose new threats to animal and human health. Climate changes will undoubtedly alter the interactions between animals and between animals and humans, which will have a huge impact on the transmission rate of existing pathogens and the emergence of new pathogens or the reemergence of old pathogens. In this special collection, interactions of all major pathogen types, including viruses, bacteria, mites and flies, protozoans, and

helminths, and their hosts, such as wild and companion animals and livestock species, are discussed. Further, anthelmintic activities of natural products are evaluated. The relevance and utility of cutting-edge tools, such as immunology, genomics and genetics, microbiome studies and metabolomics, and molecular epidemiology, in dissecting host-pathogen interactions are also discussed. This special collection provides a broad knowledge base that encourages dialogue across a wide distribution of the research community in veterinary microbiology and parasitology.

This book explores the use of numerical relativity (NR) methods to solve cosmological problems, and describes one of the first uses of NR to study inflationary physics. NR consists in the solution of Einstein ' s Equation of general relativity, which governs the evolution of matter and energy on cosmological scales, and in systems where there are strong gravitational effects, such as around black holes. To date, NR has mainly been used for simulating binary black hole and neutron star mergers like those detected recently by LIGO. Its use as a tool in fundamental problems of gravity and cosmology is novel, but rapidly gaining interest. In this thesis, the author investigates the initial condition problem in early universe cosmology -- whether an inflationary expansion period could have " got going " from initially inhomogeneous conditions -- and identifies criteria for predicting the robustness of particular models. State-of-the-art numerical relativity tools are developed in order to address this question, which are now publicly available.

This textbook introduces the reader to the new and emerging field of Conservation Psychology, which explores connections between the study of human behavior and the achievement of conservation goals. People are often cast as villains in the story of environmental degradation, seen primarily as a threat to healthy ecosystems and an obstacle to conservation. But humans are inseparable from natural ecosystems. Understanding how people think about, experience, and interact with nature is crucial for promoting environmental sustainability as well as human well-being. The book first summarizes theory and research on human cognitive, emotional, and behavioral responses to nature and goes on to review research on people's experience of nature in wild, managed, and urban settings. Finally, it examines ways to encourage conservation-oriented behavior at both individual and societal levels. Throughout, the authors integrate a wide body of published literature to demonstrate how and why psychology is relevant to promoting a more sustainable relationship between humans and nature.

Films are essential to national imagination and promotional publicity markets "domestic films" not only as entertaining, exciting, or moving, but also as topical and relevant in different ways. When assessing new films, reviewers make reference to other films and cultural products as well as social and political issues. Through such interpretive framings by contemporary and later generations, popular cinema is embedded in both national imagination and endless intertextual and intermedial frameworks. Moreover, films themselves become symbols which are cited and recycled as illustrations of cultural, social, and political history as well as national mentality. In Performative Histories, Foundational Fictions, Anu Koivunen analyzes the historicity as well as the intertextuality and intermediality of film reception as she focuses on a cycle of Finnish family melodrama and its key role in thinking about gender, sexuality, nation, and history. Close-reading posters, advertisements, publicity-stills, trailers, review journalism, and critical commentary, she demonstrates how The Women of Niskavuori (1938 and 1958), Loviisa (1946), Heta Niskavuori (1952), Aarne Niskavuori (1954), Niskavuori Fights (1957), and Niskavuori (1984) have served as sites for

imagining "our agrarian past", our Heimat and heritage as well as "the strong Finnish woman" or "the weak man in crisis". Based on extensive empirical research, Koivunen argues that the Niskavuori films have inspired readings in terms of history and memory, feminist nationalism and men's movement, left-wing allegories and right-wing morality as well as realism and melodrama. Through processes of citation, repetition, and re-cycling the films have acquired not only a heterogeneous and contradictory interpretive legacy, but also significant affective force.

Both nutrition deficiency and overnutrition can have a significant effect on the risk of infection. Nutrition, Immunity, and Infection focuses on the influence of diet on the immune system and how altering one's diet helps prevent and treat infections and chronic diseases. This book reviews basic immunology and discusses changes in immune function throughout the life course. It features comprehensive chapters on obesity and the role of immune cells in adipose tissue; undernutrition and malnutrition; infant immune maturation; pre- and probiotics; mechanisms of immune regulation by various vitamins and minerals; nutrition and the aging immune system; nutrition interactions with environmental stress; and immunity in the global health arena. Nutrition, Immunity, and Infection describes the various roles of nutrients and other food constituents on immune function, host defense, and resistance to infection. It describes the impact of infection on nutritional status through a translational approach. Chapters bring together molecular, cellular, and experimental studies alongside human trials so that readers can assess both the evidence for the effects of the food component being discussed and the mechanisms underlying those effects. The impact of specific conditions including obesity, anorexia nervosa, and HIV infection is also considered. Chapter authors are experts in nutrition, immunity, and infection from all around the globe, including Europe, Australia, Brazil, India, and the United States. This book is a valuable resource for nutrition scientists, food scientists, dietitians, health practitioners, and students interested in nutrition and immunity.

The 7th Bandung Creative Movement conference presented the theme "Dynamics of Industrial Revolution 4.0" which discussed how the digital world and connectivity changed human culture in various aspects of life, and transformed in accordance to human needs and social culture. Digital technology has transformed society to serve people from manufacturing needs to smart cities, from network connectivity to people connectivity. The application of information technology has helped in improving live quality and environmental sustainability. Digital transformation is revolutionizing how businesses and workers interconnect to be more productive and efficient. The result is improved collaboration, faster processes and time-to-market, lower costs and better products. Devices are getting smarter, meaning they are able to perform more and more tasks without human intervention; moreover, these devices generate data that provide insights to further improve processes and gain greater efficiencies. Moreover, with the Internet of Things (IoT), all these smart devices are interconnected in ways that not only help make them even smarter, but also enhances the intelligence of the overall system. Digital technology is a formidable driver for the transformation of a highly carbon-dependent world into one that is more ecologically ‘ smart. ’ We are entering a new era of environmental innovation that is driving better alignment between technology and environmental goals. Since its first announcement in 2011, industrial revolution 4.0 has dynamically changed and transformed to adjust itself to the human needs and to serve more efficiency and effectiveness of everyday life as well as environmental enhancement. The 7th Bandung Creative Movement has brought forward discussions on dynamic changes, ups and downs, innovations, relations of industrial revolution of the internet of thing, data, automation, to human physical world, new art and aesthetic, business, product innovation, built environment, and education.

Tantrums are bad--except when they save the world. An environmental picture book about finding your voice, taking collective action, and saving the planet--for kids ages 5 - 9. Sophia ’ s minding her own business when--bing bong!--the doorbell announces an unexpected guest: a polar bear. Despite Sophia ’ s protests, he walks right in, making himself at home. His ice cap is melting--where else is he supposed to go? Soon, more visitors arrive: a dispirited sea turtle and farmers whose lands have gone dry are joined by confused bees, more climate refugees, and a grumpy Bengal tiger. Sophia is frustrated and confused. She doesn ’ t understand why they showed up at her house...or what any of this has to do with her. But as Sophia hears their stories, she learns that this is her fight, too...and discovers the power of collective action, the strength of her own voice, and how all of us are stronger together. They head to City Hall only to wait around for hours before being dismissed, and Sophia just can ’ t hold it in anymore: Sophia ’ s strong feelings smouldered once more, And this time they ’ d gotten too big to ignore. Raging with purpose, with banners unfurled, She kicked off a tantrum to save the whole world! And she does--and so can you. An inspirational, beautifully illustrated picture book for kids aged 5 to 9, The Tantrum that Saved the World is part environmental story, part ode to community action, and part blueprint for building a better world--together, for all of us.
