CRS and HEUI fuel engines require clean, water-free diesel fuel. Cummins MerCruiser mandates a

primary fuel/water separator with a 10-micron rating for its QSB5.9, QSC and QSL CRS engines. Such a fine micron rating in the primary can cause excessive fuel inlet restriction problems with poor-quality fuel, which can be overcome if the capacity of the primary filter is increased to compensate.

Heui Diesel Engine

A unit injector is a high pressure integrated direct fuel injection system for diesel engines, combining the injector nozzle and the injection pump in a single component. The plunger pump used is usually driven by a shared camshaft. In a unit injector, the device is usually lubricated and cooled by the fuel itself. High pressure injection delivers power and fuel consumption benefits over earlier lower pressure fuel injection by injecting fuel as a larger number of smaller droplets, giving a much

Electronic Fuel Injection Systems for Heavy-Duty Engines

Removing the stiction from HEUI injectors eliminates the hard starting when cold, bucking, chugging, missing and black smoke. Stiction Eliminator restores HEUI injectors back to factory specifications and rejuvenates your engine to optimal performance by restoring the oil flow through the injectors, which corrects injector timing, fuel flow and the spray pattern of your injectors.

An interesting yet complicated injection system that functions by using pressurized engine oil to fire its fuel injectors, HEUI is the perpetual underdog in diesel performance.
