This manual documents v3.3 of WP 34S, a free software you can use for converting an HP-20b or HP-30b financial calculator of Hewlett-Packard into a full-fledged fast and compact scientific instrument like you have never had before - readily providing all the functions you always wanted and comfortably fitting into your shirt pocket. The function set of WP 34S is based on the famous HP-42S RPN Scientific, the most powerful programmable RPN calculator industrially built so far. Additionally, we put in the functions of the HP-16C, the HP-32SII, and the HP-21S. Furthermore, we added numerous useful functions for mathematics, statistics, physics, engineering, programming, I/O, etc., such as many statistical distributions and their inverses, Euler's Beta and Riemann's Zeta functions, Bernoulli and Fibonacci numbers, Lambert's W, the error function, and the Chebyshev, Hermite, Laguerre, and Legendre orthogonal polynomials (forget heavy table books), programmable sums and products, first and

second derivatives, integer computing in fifteen bases from binary to hexadecimal, bidirectional serial communication with your computer, battery-fail-safe on-board backup memory, 88 conversions, mainly from old Imperial to universal SI units and vice versa, 50 fundamental physical constants plus a selection of important numbers from mathematics, astronomy, and surveying, Greek and extended Latin letters plus mathematical symbols, and a stopwatch based on a real-time clock (with hardware added). WP 34S is the first RPN calculator offering you a choice of two stack sizes: traditional 4 stack levels for HP compatibility, 8 levels for convenient calculations in complex domain, advanced real calculus, vector algebra in 4D, or for whatever application you have in mind. WP 34S features up to 107 global registers, 112 global flags, up to 928 program steps in RAM, up to 6014 program steps in flash memory, a 30 byte alpha register, 16 local flags as well as up to 144 local registers allowing for recursive programming, and 4 user-programmable hotkeys. Most of the memory layout is conveniently settable by you. This 344-page manual explains all the over 700 functions of your WP 34S. It includes a wealth of information, many pictures and examples - everything you want to know also about flashing, updating, and tuning your WP 34S. This is the true and

original WP 34S reference, written by one of the two initiators of this project. Recommended for any serious science or engineering student as well as for professionals in these areas. WP34S reached its present state growing on our love for Hewlett-Packard's vintage Classics, Woodstocks, Spices, Nuts, Voyagers, and Pioneers. WP 34S has proven success in real world applications, being on the market since 2011. Meanwhile, it has got a little brother: the WP 31S, described elsewhere. Mathematical Interest Theory provides an introduction to how investments grow over time. This is done in a mathematically precise manner. The emphasis is on practical applications that give the reader a concrete understanding of why the various relationships should be true. Among the modern financial topics introduced are: arbitrage, options, futures, and swaps. Mathematical Interest Theory is written for anyone who has a strong high-school algebra background and is interested in being an informed borrower or investor. The book is suitable for a mid-level or upper-level undergraduate course or a beginning graduate course. The content of the book, along with an understanding of probability, will provide a solid foundation for readers embarking on actuarial careers. The text has been suggested by the Society of Actuaries for people preparing for the Financial Mathematics exam. To that end, Mathematical Interest Theory includes more than 260 carefully worked examples. There are over 475 problems, and numerical answers are included in an appendix. A companion student solution manual has detailed solutions to the odd-numbered problems. Most of the examples involve computation, and detailed instruction is provided on how to use the Texas Instruments BA II Plus and BA II Plus Professional calculators to efficiently solve the problems. This Third Edition updates the previous edition to cover the material

in the SOA study notes FM-24-17, FM-25-17, and FM-26-17.

traditional financial techniques using simple interest rate and accounting rate of return methods to conclusively show how these practices are now defunct
