Beginning in the late nineteenth century,

India played a pivotal role in global

conversations about population and

reproduction. In

Reproductive Politics

and the Making of

Modern India, Mytheli

Sreenivas demonstrates

how colonial

administrators,

postcolonial

development experts,

nationalists,

eugenicists,

feminists, and family

planners all aimed to

reform reproduction to

transform both

individual bodies and

the body politic. Across the political spectrum, people insisted that regulating reproduction was necessary and that limiting the population was essential to economic development. This book investigates the often devastating implications of this logic, which demonized some women's reproduction as the cause of national and planetary catastrophe. To tell this story, Sreenivas explores debates about marriage, family, and contraception. She also demonstrates how concerns about reproduction surfaced within a range of political questions—about poverty and crises of subsistence, migration and claims of national

sovereignty, normative heterosexuality and drives for economic development. Locating India at the center of transnational historical change, this book suggests that Indian developments produced the very grounds over which reproduction was called into question in the modern world. The open-access edition of *Reproductive Politics and the Making of Modern India* is freely available thanks to the TOME initiative and the generous support of The Ohio State University Libraries.

Autopsy in the 21st Century CABI

Comprised of 200 readable and informative historic vignettes reflecting all areas of Senate activities, from the well known and notorious to the unusual and whimsical.

Prepared by Richard A. Baker, the Senates Historian, these brief sketches, each with an accompanying illustration and references for further reading, provide striking insights into the colorful and momentous history of The World's Greatest Deliberative Body.

Review from Goodreads: "Jason" rated this book with 3 stars and had this to say "This coffee table book on Senate History comes from none other than the U.S. Senate Historian, Richard Baker. The

House of Representatives recently acquired noted historian of the Jacksonian era, Robert Remini as the official House Historian. He recently wrote a pretty impressive tomb on the House of Representatives. The Senate already has a 4 volume history written by US Senator, Robert C. Byrd of West Virginia, so the Senate could not reply in that manner. So, I think the coffee table book was the best that we could muster. I think this is the first time I have actually read a coffee table book from cover to cover. It is a chatty little story book filled with useful cocktail-party-history of the US Senate. That's useful knowledge to me, as I never know what to say at Washington cocktail parties. Perhaps anecdotes about Thomas Hart Benton will help break the ice. The most striking thing to me about the book was the number of attacks on the Capitol. I had

heard about all the incidents individually, but it is more jolting to see them sequentially. 3 bombings, 2 gun attacks and then the attempt on September 11th. In a way, its remarkable that the Capitol complex remained so open for so long. Note, I use the past tense here. As any of you who have visited the capitol recently will have noted, it is increasingly difficult to get in. And once the Capitol Visitor Center is completed, I expect it will be very much a controlled experience like the White House. In any case, Baker's prose is breezy and he is dutifully reverent to the institution without missing the absurdities of Senate life. You also get a sense of the breakdown in lawfulness that preceded the Civil War. Its not just the canning of Charles Sumner, its also the Mississippi Senator pulling a gun on Missouri Senator

Thomas Hart Benton in the Senate chamber. Then there is the case of California Senator David Broderick (an anti-slavery Democrat) being killed in a duel by the pro-slavery Chief Justice of the California Supreme Court. Apparently, back in those days, California was a lot more like modern Texas. In any case, the slide toward anarchy can definitely be found long before Fort Sumter. Another interesting aside that I really never knew concerns the order of succession. All of us learn in school that it is the President, then the Vice President, then the Speaker of the House and then President Pro Tempore of the Senate. After that, you get the members of the Cabinet, and I was aware that as new departments were created, they have been shuffled up a bit. What I did not know, is that Congress was not always in the order of succession at all. For a long time, it devolved from the

President to the VP and then directly to the Secretary of State. Furthermore, when they first inserted Congress, it was the President Pro Tempore of the Senate who was third in line over the Speaker of the House. The structure we all know and love was only finalized in 1947 after some hard thinking in light of FDR's demise and the Constitutional Amendments on succession that followed. Anyway, this is a book for government geeks. If you are one, its a nice read and about as pleasant a way to introduce yourself to Senate history as I have found. If not, there are prettier coffee table books to be had."

At a time when society is demanding accountability from the medical education system and residency review committees are demanding written curricula, this book offers a practical, yet theoretically sound, approach to curriculum development in medicine. Short, practical, and generic in its approach, the book begins with an overview of a six-step approach to

curriculum development. Each succeeding chapter then covers one of the six steps: problem identification, targeted needs assessment, goals and objectives, education methods, implementation, and evaluation. Additional chapters address curriculum maintenance, enhancement, and dissemination.

Throughout, examples are used to illustrate major points. An appendix provides the reader with a selected list of published and unpublished resources on funding, faculty development, and already developed curricula.

These manuals provide the highest level of clarity and completeness for all service and repair procedures. Enthusiasts, do-it-yourselfers, and professional technicians will appreciate the quality of photographs and illustrations, theory of operation, and accurate step-by-step instructions. If you are looking for better understanding of your BMW, look no further than Bentley. Even if you do not repair your own vehicle, knowledge of its internal workings will help

you when discussing repairs and maintenance with your professional automotive technician. This Bentley Manual is the only comprehensive, single source of service information and specifications available specifically for BMW 5 Series from 1997 to 2002. The aim throughout this manual has been simplicity, clarity and completeness, with practical explanations, step-by-step procedures and accurate specifications. Whether you are a professional or a do-it-yourself BMW owner, this manual will help you understand, care for and repair your E39 5 Series. Though the do-it-yourself BMW owner will find this manual indispensable as a source of detailed maintenance and repair information, the BMW owner who has no intention of working on his or her car will find that reading and owning this manual will make it

possible to discuss repairs more intelligently with a professional technician.

The IABC Handbook of Organizational Communication
JHU Press

The main topic of the book is a reconstruction of the evolution of nervous systems and brains as well as of mental-cognitive abilities, in short “intelligence” from simplest organisms to humans. It investigates to which extent the two are correlated.

One central topic is the alleged uniqueness of the human brain and human intelligence and mind. It is discussed which neural features make certain animals and humans intelligent and creative: Is it absolute or relative brain size or the size of “intelligence centers” inside the brains, the number of nerve cells inside the brain in total or in such “intelligence centers” decisive for the degree of intelligence, of mind and eventually consciousness? And which are the driving forces behind these processes? Finally, it is asked what all this means for the

classical problem of mind-brain relationship and for a naturalistic theory of mind.
