AGRICULTURAL MECHANICS: FUNDAMENTALS AND APPLICATIONS, 6th edition is designed for high school students learning agricultural mechanics. The text aims to connect the theory behind mechanics with the practical application. Topics covered are those common to most programs and include metal and career selection; wood and metal working; tool identification; project planning; cutting and welding; paints and paint application; power mechanics; electrical wiring; plumbing; hydraulics; concrete and masonry; and agricultural structures. Safety rules and precautions are prominent in every section of the units as well as an entire unit on personal safety. To engage the reader, Agricultural Mechanics Fundamentals and Applications, 6th edition is illustrated with up-to-date images that support text material. In addition, 36 charts and data tables are included to provide information for project planning and measurement conversions. The last section of the text is dedicated to detailed drawings of 58

complete plans that are designed for the skill levels students should acquire at the completion of their course of study in agricultural mechanics. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

Commercial-Industrial Cleaning, by Pressure-Washing, Hydro-Blasting and UHP-Jetting is the first proprietary manual for cleaning and rehabilitation through pressure-washing, hydro-blasting and ultra high pressure water jetting (UHP). It examines the cleaning, restoration and rehabilitation of statuary and historical structures; manufacturing hardware; and application technologies for residential, commercial and industrial areas, structures and buildings. Commercial-Industrial Cleaning, by Pressure-Washing, Hydro-Blasting and UHP-Jetting contains over 450 applications from agricultural, marine, municipal, food processing, paper-pulp, pharmaceutical and cosmetic, industrial and power generating maintenance areas. It includes gear lists to help readers easily identify the appropriate tooling and equipment for each specific application and industry. Commercial-Industrial Cleaning, by Pressure-Washing, Hydro-Blasting and UHP-Jetting supplies readers with the tools to create a successful business model for retaining and safeguarding corporate application itineraries. It is a valuable guide for maintenance superintendents, buyers of maintenance services, contractors, field technicians, engineers and architects involved in commercial-industrial cleaning.

Describes how to operate a portable vehicle washer developed by the Missoula Technology and Development Center. The washer is mounted on a trailer that can be towed by a 34-ton pickup truck. A separate report, MTDC Portable Vehicle Washer (04342819MTDC), describing the development of the washer and mechanical drawings for the washer (MTDC1020) are available from the center. The washer is intended to reduce the spread of weeds by thoroughly cleaning fragments of vegetation, spores, and weed seeds from vehicles when they arrive and leave a fire camp or worksite. Operators clean the vehicle with two wands and two underbody washers that spray water under high pressure. Wash water is captured on a containment mat and filtered for reuse. Persons using the washer will need to read and understand the operators manuals for the washers different components (such as the generator, engine, and pump) in addition to this manual.

Describes a vehicle washer that is mounted on a flatbed trailer and can be towed by a 3/4-ton pickup truck when the water tanks are empty. The washer can be used at fire camps where weed seeds need to be removed from vehicles before and after they leave the area. Operators use two high-pressure wands to wash the vehicle's sides, wheels, and wheel wells. One high-pressure underbody washer cleans the vehicle's underbody when the vehicle drives onto the wash mat and another cleans the underbody again as the vehicle drives off. Vehicles are washed on an industrial rubber mat that has 3-inch-high, foam-filled barriers on all sides to hold the wash water. The water is filtered before being reused. The prototype washer was tested at fire camps in Montana during the 2002 and 2003 fire seasons. Operators took 2 to 3 minutes to wash a standard pickup truck, sport utility vehicle, or car and another minute or so longer to wash hotshot crew vehicles, fire engines, and school buses. When vehicles are especially muddy, the wash water cannot be reused without clogging filters and wearing out bypass valves. In such cases, dirty water can be hauled away by trucks for disposal. Drawings for the vehicle washer (MTDC-1020) and an operator's manual (0434-2826-MTDC) are available from the Missoula Technology and Development Center.
