In September of 2014, technology giant Canon U.S.A. Inc. announced to the public the release of three new cameras to the Powershot line. Among those announced launch is the Powershot

SX60 HS digital camera. The thrust behind the launch of this model, according to the Tech-giant, is the need to continually meet the demand for high quality imaging tools and products. Reviews to date have lauded the company for meeting these demands; purporting that the SX60 HS camera is packed with features to guarantee an optimized photo experience for both professional and amateur users. Among the features of the new Powershot SX60 HS camera is the sixteen (16) megapixel 1/2.3 inch BSI-CMOS sensor, Optical Image Stabilizer, fully articulated three (3) inch LCD monitor, Electronic Viewfinder with 100% coverage available, external and built-in flash, a Self-timer feature and continuous drive of approximately 6.4 frames per second.

The story of Canon begins in Japan in 1937, when four young entrepreneurs - Takeshi Mitarai, Goro Yoshida, Saburo Uchida, and Takeo Maeda - came together to found a new company. They named their company "Precision Optical Instruments Laboratory" and set out to produce high-quality cameras that could compete with the best in the world. At the time, Japan was still a relatively new player in the camera industry, with most of the top brands coming from Europe and the United States. However, the founders of Canon were determined to change this, and they believed that they had the knowledge, skills, and drive to create cameras that could rival those of their competitors. The early days of the company were challenging, as Japan was still recovering from the effects of the Great Depression and the country was on the brink of war. However, the founders of Canon persevered, and they were able to secure funding from a group of investors who believed in their vision. With their funding secured, the founders of Canon set to work creating their first camera. Their first product was a 35mm camera called the Kwanon, named after the Buddhist goddess of mercy. The Kwanon was a revolutionary camera, featuring a high-quality lens and a unique design that set it apart from its competitors. Despite its innovative design, the Kwanon was not an immediate success. However, the founders of Canon remained determined to succeed, and they continued to refine their products and build their reputation. Over time, Canon became known for its high-quality cameras and lenses, and the company grew to become one of the most respected brands in the photography industry. Today, Canon is a household name, with a wide range of products that are used by photographers all over the world. From its humble beginnings in 1937, Canon has grown into a global leader in the field of photography, thanks to the vision and determination of its founders.

As a beginner or professional photographer or filmmaker, you don't

need to struggle to figure out how to use the Canon EOS Rebel T8i/850D if you can take the step to purchase this book. Early February in 2020, Canon, arguably the best camera producer in the globe today and a giant creator of digital solutions, revealed the aesthetic Canon EOS Rebel T8i/850D, a beauty that speaks more pleasantly than its tag - Rebel. The camera was unveiled as a high-performing device and brandished with high-quality features. The picturing device is easily Canon's most populous Digital Single-Lens Reflex (DSLR) camera line manufactured in the last few years. Likewise, the most intriguing aspect of it is that it gives a soft landing to those who are previously most exposed to Smartphones and other picturing devices. This leverage means that neophytes do not have to bother themselves with getting abreast with the technicalities of the camera. Canon, with this design, has provided an incredible performance level, which gives users control over the device. It has also been given an affordable and supportive setup for beginners and more experienced users. Embodied in the Canon EOS Rebel T8i/850D is a 24.1-megapixel Advanced Photo System type-C (APS-C) size sensor which is similar to the kind of sensor found in one of Canon's top designs, the T7i camera. Although, the image quality between both cameras is nearly identical, with the T8i given a little nudge. However, as an advantage, Canon placed in the T8i a DIGIC eight image processor which allows for the filming of Ultra High Definition (UHD) 4k video at 24 frames per second. A preview of what you will get if you purchase this book include;

Canon EOS Rebel T7i/800D For Dummies John Wiley & Sons

This complete illustrated guide will fully equip its readers to master this system's exciting features and potential. Aimed at beginners stepping up to DSLR photography, the Canon Rebel T6s/EOS 760D is the new flagship model for the company's line of interchangeable-lens DSLR cameras, which inherits a broad range of features from the mid-range EOS 70D. It is launched simultaneously with the Rebel T6i/EOS 750D, a cheaper model with fewer features. Although their body designs are notably different, the two models essentially have only slight differences. The layout and controls of the T6s are intended to appeal to a higher-end photographer, and include a top-mounted LCD display. The rear-panel four-way controller is replaced by a Control Dial interface, making it appealing for the T6s to serve as a second body alongside a higher-end Canon model. Internally the T6s contains a 24.2-megapixel CMOS image sensor, the highest resolution yet provided by a Canon APS-C format DSLR. Output is handled by a DIGIC 6 image processor. This combination provides an ISO sensitivity range of 100-12,800 (expandable to 25,600) and a burst rate of five frames per second. The T6s can automatically disable the LCD monitor when the viewfinder is brought to the eye, due to a proximity sensor above the eyepiece. It also features a single-axis electronic level function, and offers several live-view and movie-mode capabilities not found in the T6i. It can also adjust focus between frames in burst-mode live view shooting, to capture high dynamic range movies, and to digitally "zoom" movies during capture by cropping the sensor window. Both cameras offer 19-point, cross-type phase-detection autofocus with Hybrid CMOS AF III autofocus, improving performance and tracking in live-view shooting. They also have 7,560 pixel RGB+IR metering sensors and locking mode dials. Their viewfinders include the Intelligent Viewfinder overlay function, (a Rebel-

series first). In-camera Wi-Fi networking with Active NFC (Near Field Communication) allows the camera to pair with compatible Android devices. Also included is Silent Shooting mode support, flicker detection, and lens distortion correction. "
