Security camera systems are commonly used to record video as a way to ensure homes, businesses, and properties are protected. Security footage can consume a lot of storage space, especially if you're recording high resolution security cameras such as 8MP 4K security cameras. Rather than storing large video files that take up lots of hard drive space, certain camera applications may only need to record video snapshots, which are still pictures from a live video stream.

The two most popular DVR resolution types are CIF and D1. CIF is defined as 320x240 pixels and D1 is 704x480. As you can tell, D1 is 4 times larger than CIF. This entails that the raw analog signal of the camera will be compressed less, giving you better detail.
