The premise that writing is a socially-situated act of interaction between readers and writers is well established. This volume first, corroborates this premise by citing pertinent evidence, through the analysis of

written texts and interactive writing contexts, and from educational settings across different cultures from which we have scant evidence.

Secondly, all chapters, though addressing the social nature of writing, propose a variety of perspectives, making the volume multidisciplinary in nature. Finally, this volume accounts for the diversity of the research perspectives each chapter proposes by situating the plurality of terminological

issues and methodologies into a more integrative framework. Thus a coherent overall framework is created within which different research strands (i.e., the sociocognitive, sociolinguistic research, composition work, genre analysis) and pedagogical practices developed on L1 and L2 writing can be situated and acquire meaning. This volume will be of particular interest to researchers in the areas of language and literacy education in L1

and L2, applied linguists interested in school, and academic contexts of writing, teacher educators and graduate students working in the fields of L1 and L2 writing.

Mathematics research papers provide a forum for

all mathematics enthusiasts to exercise their mathematical experience, expertise and excitement. The research paper process epitomizes the differentiation of instruction, as each student chooses their own topic and extends it as far as their motivation and desire takes them. The features and benefits of the research paper process offer a natural alignment with all eight Common Core State Standards for Mathematical Practice. Writing Math Research Papers serves both as a text for students and as a resource for instructors and administrators. The

Writing Math Research Papers program started at North Shore High School in 1991, and it received the 1997 Chevron Best Practices in Education Award as the premier high school math course in the United States. Author Robert Gerver's articles on high school mathematics research programs were featured in the National Council of Teachers of Mathematics publication *Developing Mathematically Promising Students*, the NCTM's 1999 Yearbook, *Developing Mathematical Reasoning in Grades K – 12*, and in the September 2017 issue of the

David Crystal's classic English as a Global Language considers the history, present status and future of the English language, focusing on its role as the leading international language. English has been deemed the most 'successful' language ever, with 1500 million speakers internationally, presenting a difficult task to those who wish to investigate it in its entirety. However,

Crystal explores the subject in a measured but engaging way, always backing up observations with facts and figures. Written in a detailed and fascinating manner, this is a book written by an expert both for specialists in the subject and for general readers interested in the English language.
