This book presents a state-of-the-art overview of the research and development in designing electrode and electrolyte materials for Li-ion batteries and supercapacitors. Further, green energy production via the water splitting approach by the hydroelectric cell is also explored. Features include: • Provides details on the latest trends in design and optimization of electrode and electrolyte materials with key focus on enhancement of energy storage and conversion device performance • Focuses on existing nanostructured electrodes and polymer electrolytes for device fabrication, as well as new promising research routes toward the development of new materials for improving device

---

performance • Features a dedicated chapter that explores electricity generation by dissociating water through hydroelectric cells, which are a nontoxic and green source of energy production • Describes challenges and offers a vision for next-generation devices This book is beneficial for advanced students and professionals working in energy storage across the disciplines of physics, materials science, chemistry, and chemical engineering. It is also a valuable reference for manufacturers of electrode/electrolyte materials for energy storage devices and hydroelectric cells.

This book presents current world thinking on the design and construction of large covered spaces. By drawing together contributions on particular design issues from internationally renowned projects directly from the designers, architects and engineers responsible for those schemes, readers are offered insights into many of the most innovative construction design projects of recent years. Technologies explored include the advances within stressed membrane roofing, atria and glass structures, with a focus on international developments. The book also addresses the problems of construction associated with these ambitious and vast projects and the attendant environmental issues and concerns that are raised with such high-profile schemes. This book is an essential addition to the literature in the field of progressive construction design and will appeal broadly to architects, engineers, environmentalists, designers and constructors.

#### AFOQT Math Workbook 2020 & 2021 John Wiley & Sons

This book is dedicated to Aristid Lindenmayer on the occasion of his 60th birthday on November 17, 1985. Contributions range from mathematics and theoretical computer science to biology. Aristid Lindenmayer introduced language-theoretic models for developmental biology in 1968. Since then the models have been customarily referred to as L systems. Lindenmayer's invention turned out to be one of the most beautiful examples of interdisciplinary science: work in one area (developmental biology) induces most fruitful ideas in other areas (theory of formal languages and automata, and formal power series). As evident from the articles and references in this book, the interest in L systems is continuously growing. For newcomers the first contact with L systems usually happens via the most basic class of L systems, namely, DOL systems. Here "0" stands for zero context between developing cells. It has been a major typographical problem that printers are unable to distinguish

---

between 0 (zero) and 0 (oh). Thus, DOL was almost always printed with "oh" rather than "zero", and also pronounced that way. However, this misunderstanding turned out to be very fortunate. The wrong spelling "DOL" of "DOL" could be read in the suggestive way: DO L Indeed, hundreds of researchers have followed this suggestion. Some of them appear as contributors to this book. Of the many who could not contribute, we in particular regret the absence of A. Ehrenfeucht, G. Herman and H.A. Maurer whose influence in the theory of L systems has been most significant.

### **Managerial Accounting**

This book explores and interrogates access and diversity in applied theatre and drama education. Access is persistently framed as a strategy to share power and to extend equality, but in the context of current and recent power struggles, it is also seen as a discourse that reinforces marginalisation and exclusion. The political bind of access is also a conceptual problem. It is impossible to refuse to engage in strategies to extend access to institutions, representations, buildings, education, discourse, etc. We cannot oppose access or strategies for access without reinforcing marginalisation and exclusion. We can't not want access for ourselves or for others. However, we are then in danger of remaining immersed in a distribution of power that reinforces and naturalises inequality as difference. For applied theatre and

drama education, the act of creating, teaching, and learning is intrinsically connected to choice, along with the agency and capacity to choose. What is less clear, and what still interests us, is how the distribution of power and representation creates the schema for an analysis of access and diversity. This book was originally published as a special issue of Research in Drama Education: The Journal of Applied Theatre and Performance.

"Staff from smaller airports typically lack specialized expertise in the negotiation and development of airport property or the resources to hire consultants. ACRP Research Report 213 provides airport management, policymakers, and staff a resource for developing and leasing airport land and improvements, methodologies for determining market value and appropriate rents, and best practices for negotiating and re-evaluating current lease agreements. There are many factors that can go into the analysis, and this report reviews best practices in property development."--Foreword.
