Research in multi-agent systems offers a promising technology for problems with networks, online trading and negotiations but also social structures and communication. This is a book on agent and multi-agent technology for internet and enterprise systems. The book is a pioneer in the combination of the fields and is based on the concept of developing a platform to share ideas and presents research in technology in the field and application to real problems. The chapters range over both applications, illustrating the possible uses of agents in an enterprise domain, and design and analytic methods, needed to provide the solid foundation required for practical systems.

This book presents the papers from the Internal Combustion Engines: Performance, fuel economy and emissions held in London, UK. This popular international conference from the Institution of Mechanical Engineers provides a forum for IC engine experts looking closely at developments for personal transport applications, though many of the drivers of change apply to light and heavy duty, on and off highway, transport and other sectors. These are exciting times to be working in the IC engine field. With the move towards downsizing, advances in FIE and alternative fuels, new engine architectures and the introduction of Euro 6 in 2014, there are plenty of challenges. The aim remains to reduce both CO2 emissions and the dependence on oil-derivate fossil fuels whilst meeting the future, more stringent constraints on gaseous and particulate material emissions as set by EU, North American and Japanese regulations. How will technology developments enhance performance and shape the next generation of designs? The book introduces compression and internal combustion engines ' applications, followed by chapters on the challenges faced by alternative fuels and fuel delivery. The remaining chapters explore current improvements in combustion, pollution prevention strategies and data comparisons. presents the latest requirements and challenges for personal transport applications gives an insight into the technical advances and research going on in the IC Engines field provides the latest developments in compression and spark ignition engines for light and heavy-duty applications, automotive and other markets

Living Standards Measurement Study No. 108. Nigeria, which has experienced high fertility and rapid

population growth over the past 30 years, has launched efforts to stem its population growth through contraceptive use. In this study, individual women are linked to the characteristics of the nearest pharmacy, health facility, and source of family planning to assess the importance of the socioeconomic background and the characteristics of nearby services for women's contraceptive use and fertility. The results suggest that limited levels of female schooling are constraining contraceptive use, particularly in rural areas. Policies to raise female schooling will raise contraceptive use and lower fertility. Broader availability of the pill through pharmacy outlets and of the injection and IUD in fixed health facilities is also likely to raise contraceptive use. Consultation fees at health facilities do not appear to be constraining demand for modern methods.
