Steps (with ...
The Hot Forging Manufacturing Process.
The hot forging manufacturing process is
performed at extreme high temperature
(up to 1150 ° C for steel, 360 to 520 ° C
for al-alloys, 700 to 800 ° C for cu-

alloys). This temperature is necessary in
order to avoid strain hardening of the
metal during deformation.

Coke formed by heating bituminous coal in the
forge Having been reduced, coke burns very
cleanly and hot, and it is what we heat the steel
with. When you properly build and maintain a fire
in the forge using bituminous coal, it will produce
coke that sticks together in large chunks.

Best Fuel for a Blacksmith Forge | MOTHER EARTH NEWS

Iron must be very hot to shape with a hammer. Hot iron becomes cold very soon. A blacksmith has only a few seconds to hammer a piece of iron, before it must be put back in the fire to become hot again. A forge is a special oven for metalworking. It burns coal or charcoal in a very hot fire. A bellows pushes air into the forge, to make the fire burn hotter. The blacksmith puts pieces of iron in the fire to make them hot and to keep them hot until they use it.

Home - HisForge

A Blacksmith needs a forge for one simple

reason. Burning fire or coal doesn't get hot enough to heat steel to the point where it can be worked. Yup! That is pretty much it. Wood will begin to burn at around 500 degrees fahrenheit and under normal conditions can get up to around 900 or 1000 degrees fahrenheit.
