A strong grounding in basic histology is essential for all pathologists. However, there had always been a gap between histology and pathology in which histologic information specifically for the pathologist was often lacking. Histology for Pathologists deals with the microscopic features of normal human tissues, from the perspective of the surgical pathologist. This is the only text that uses human (vs. animal) tissues for the histology. It is the best reference in the literature for information on normal histology, and, as such, is essential for all clinical pathologists. Written by pathologists for pathologists, the new edition updates the pathologist's understanding of normal histology up to date with the incremental advances made in the last five years. The 3rd edition has become a "classic" purchased by virtually all residents beginning their pathology training, as well as pathologists in practice. The 4th edition builds on that substantial foundation. The table of contents remains essentially the same with the

exception of some changes in authorship.

Many useful features simplify mastery of difficult concepts: Case studies for each major section present detailed cases with signs and symptoms, history, and laboratory data. Questions at the conclusion of each case reinforce important clinical concepts. Reviews of cell biology, basic science, and biochemistry refresh students on the foundations of physiological knowledge. Clinical Application boxes draw the connection between physiology to practical issues students face and help with preparation for the USMLE. Pathophysiology sections are featured in every chapter. Review questions with answers in each chapter aid in preparation for the examination. Integrative Physiology inserts highlight how specific systems, organs, and tissues work together. More than 350 illustrations aid with visual learning, including original schematic diagrams, photos, and tables. Concept-focused summaries conclude each chapter for more
