ì Long neglected, the history of nursing has recently become the focus of a considerable amount of attention. Over the past decade, developments in the history of medicine, the history of women ó particularly of women í s work ó and nursing itself have resulted in a new

recognition of the importance of the subject. As the official journal of the American Association for the History of Nursing, Nursing History Review enables those interested in nursing and health care history to trace new and developing work in the field. The Review publishes significant scholarly work in all aspects of nursing history as well as reviews of recent books and updates on national and international activities in health care history. î Under the distinguished editorship of Joan Lynaugh, with the Editorial Review Board including such noted nurses as Ellen Baer, Susan Baird, Olga Maranjian Church, Donna Diers, Marilyn Flood, Beatrice Kalisch, The Review provides historical articles, historiographic essays, discourse on the work of history, and multiple book reviews in each annual issue. Articles appearing in The Review are indexed/abstracted in CINAHL, Current Contents, Social Science Citation Index, Research Alert, RNdex, Index Medicus, MEDLINE, Historical Abstracts, and America: History and Life. **Discovering Texas History** iUniverse Situates comparative-historical analysis within contemporary debates in political science and explores the latest theoretical and conceptual advances. This book relates research being implemented in three main research areas: secure connectivity and intelligent systems, real-time analytics and manufacturing knowledge and virtual manufacturing. Manufacturing SMEs and MNCs want to see how Industry 4.0 is implemented. On the other hand, groundbreaking research on this topic is constantly growing. For the aforesaid reason, the Singapore Agency for Science, Technology and Research (A*STAR), has created the model factory initiative. In the model factory, manufacturers, technology providers and the broader industry can (i) learn how I4.0 technologies are implemented

on real-world manufacturing use of time and space, reaching back to the fifth century and around the globe. Further, the language has always varied from place to place and continues to evolve today. Instructors face the challenges of teaching this vast subject in one semester and of engaging students with unfamiliar material and techniques. This volume guides instructors in designing an HEL course suited to their own interests and institutions. The essays consider what subjects of HEL to include, how to organize the course, and what textbook to assign. They offer historical approaches and those that are not structured by chronology. Sample assignments provide opportunities for students to conduct original research, work with archives and digital resources, and investigate language in their communities. The essays also help students question notions of linguistic correctness.

cases, (ii) test process improvements enabled by such technologies at the model factory facility, without disrupting their own operations, (iii) co-develop technology solutions and (iv) support the adoption of solutions at their everyday industrial operation. The book constitutes a clear base ground not only for inspiration of researchers, but also for companies who will want to adopt smart manufacturing approaches coming from Industry 4.0 in their pathway to digitization.

Basics Urban Analysis is a new addition to the module on city planning. Building on the elements of cities as described in the volume *Basics Urban Building Blocks*, it provides techniques for analyzing cities.

As a basis for city planning and architectural design work, a solid understanding of the existing and surrounding urban structures is indispensable. This volume not only explains the possible approaches; it also describes in practical terms how to implement those approaches in the areas analyzed and how to evaluate the data one has collected.

The self-descriptive title, *A Universal Template For Research Position and Life Experience Papers*, implies that there is a position that writers take in even the simplest of essays. As such, *Template* provides an opportunity to accomplish two tasks at once: consider the definitive differences between *Research*, *Position*, and *Experience* papers, and explore the issues that impound and empower contemporary urban education. Dale Benjamin Drakeford provides an interactive workshop to guide student writing on any social science subject. Agreeing with many scholars that public and free pedagogy is indispensable, the author also argues that there is no wrong or right in scholastic debate, only correct presentation

of objective thoughts or non-objective attitudes. This the author says, is what is sometimes forgotten in the heat of getting ideas on paper. Hence, *Template* provides structure for planning papers, and in-process cues for staying on task to complete them with proper formality.

DOING HISTORY: RESEARCH AND WRITING IN THE DIGITAL AGE

presents a soup to nuts approach to researching and writing about history, with an eye for making the most of current technology. The authors begin their straightforward approach with an overview of the discipline. Then, they lay out a systematic approach to research, including how to locate and analyze sources (both primary and secondary), how to write the paper and cite research properly, and how to present the work in conferences.

Evidence Explained iUniverse Systems Requirement Analysis gives the professional systems engineer the tools to set up a proper and effective analysis of the resources, schedules and parts that will be needed in order to successfully undertake and complete any large, complex project. The text offers the reader the

methodology for rationally breaking a large project down into a series of stepwise questions so that a schedule can be determined and a plan can be established for what needs to be procured, how it should be obtained, and what the likely costs in dollars, manpower and equipment will be in order to complete the project at hand. Systems Requirement Analysis is compatible with the full range of engineering management tools now popularly used, from project management to competitive engineering to Six Sigma, and will ensure that a project gets off to a good start before it's too late to make critical planning changes. The book can be used for either self-instruction or in the classroom, offering a wealth of detail about the advantages of requirements analysis to the individual reader or the student group. * Author is the recognized authority on the subject of Systems Engineering, and was a founding member of the International Council on Systems Engineering (INCOSE) * Defines an engineering system, and how it must be broken down into a series of process steps, beginning with a definition of the problems to be solved * Complete overview of the basic principles involved in setting up a systems requirements analysis program, including how to set up the initial

specifications that define the problems and parameters of an engineering program * Covers various analytical approaches to systems requirements including: structural and functional analysis, budget calculations, and risk analysis

This book constitutes the refereed post-proceedings of the Third IFIP WG 9.7 Conference on the History of Nordic Computing, HiNC3, held in Stockholm, Sweden, in October 2010. The 50 revised full papers presented together with a keynote address

and a panel discussion were carefully reviewed and selected from numerous submissions. The papers focus on the application and use of ICT and ways in which technical progress affected the conditions of the development and use of ICT systems in the Nordic countries covering a period from around 1970 until the beginning of the 1990s. They are organized in the following topical sections: computerizing public sector industries; computerizing management and financial industries; computerizing art, media, and schools; users and systems development; the making of a Nordic computing industry; Nordic networking; Nordic software development; Nordic research in software and systems development; teaching at Nordic universities; and new historiographical approaches and methodological reflections.
