We live in a highly connected world with multiple self-interested agents interacting and myriad opportunities for conflict and cooperation. The goal of game theory is to understand these opportunities. This book presents a rigorous introduction to the mathematics of game theory without losing sight of the joy of the subject. This is done by focusing on theoretical highlights (e.g., at least six Nobel Prize winning results are developed from scratch) and by presenting exciting connections of game theory to other fields such as computer science (algorithmic game theory), economics (auctions and matching markets), social choice (voting theory), biology (signaling and evolutionary stability), and learning theory. Both classical topics, such as zero-sum games, and modern topics, such as sponsored search auctions, are covered. Along the way, beautiful mathematical tools used in game theory are introduced, including convexity, fixed-point theorems, and probabilistic arguments. The book is appropriate for a first course in game theory at either the undergraduate or graduate level, whether in mathematics, economics, computer science, or statistics. The importance of game-theoretic thinking transcends the academic setting—for every action we take, we must consider not only its direct effects, but also how it influences the incentives of others.

This book presents a chronology of thirty definitions attributed to the word, term, phrase, and concept of “documentary” between the years 1895 and 1959. The book dedicates one chapter to each of the thirty definitions, scrutinizing their idiosyncratic language games from close range while focusing on their historical roots and concealed philosophical sources of inspiration. Dan Geva's principal argument is twofold: first, that each definition is an original ethical premise of documentary; and second, that only the structured assemblage of the entire set of definitions successfully depicts the true ethical nature of documentary insofar as we agree to consider its philosophical history as a reflective object of thought in a perpetual state of being-self-defined: an ethics sui generis.

Resist: A Story of D-Day BoD - Books on Demand
A beloved classic that captures the powerful bond between man and man's best friend. Billy has long dreamt of owning not one, but two, dogs. So when he's finally able to save up enough money for two pups to call his own—Old Dan and Little Ann—he's ecstatic. It doesn't matter that times are tough; together they'll roam the hills of the Ozarks. Soon Billy and his hounds become the finest hunting team in the valley. Stories of their great achievements spread throughout the region, and the combination of Old Dan's brawn, Little Ann's brains, and Billy's sheer will seems unbeatable. But tragedy awaits these determined hunters—now friends—and Billy learns that hope can grow out of despair, and that the seeds of the future can come from the scars of the past. Okonkwo is the greatest warrior alive, famous throughout

West Africa. But when he accidentally kills a clansman,

things begin to fall apart. Then Okonkwo returns from

exile to find missionaries and colonial governors have

arrived in the village. With his world thrown radically off-

balance he can only hurtle towards tragedy. Chinua

Achebe's stark novel reshaped both African and world

literature. This arresting parable of a proud but powerless

man witnessing the ruin of his people begins Achebe's

landmark trilogy of works chronicling the fate of one

African community, continued in Arrow of God and No

See how energy therapies can normalize physiology and restore your patients' health! Energy Medicine:

The Scientific Basis, 2nd Edition provides a deeper understanding of energy and energy flow in the human body. Using well-established scientific research, this book documents the presence of energy fields, discerns how those fields are generated, and determines how they are altered by disease, disorder, or injury. It then describes how therapeutic applications can restore natural energy flows within the body. Written by recognized energy medicine expert Dr. James Oschman — who is also a physiologist, cellular biologist, and biophysicist — this resource shows how the science of energetics may be used in healing diseases that conventional medicine has difficulty treating. Easy-to-understand coverage simplifies the theory of energy medicine and the science behind it, providing detailed, coherent explanations for a complex subject. Well-established scientific research shows why and how energy medicine works. Multi-disciplinary approach covers energy medicine as it applies to various healthcare disciplines, from acupuncture to osteopathy to therapeutic touch and energy psychology.

Historical fiction has a great deal to offer as its readers and devotees have always known. The time is ripe however for the historical novel and historical picture book to be promoted more emphatically so that many more are made aware of the delight and learning to be found in the genre. The editors of this book invited authors, academic writers and teachers to reflect on the nature, scope, range and richness of historical fiction for children. What is collected here provides an overview of the field, a consideration of significant writers of historical fiction from the nineteenth century onwards, a sense of the various historical eras commonly explored (Stone Age to World War 2), a discussion of commonly raised issues, themes and topics such as child labor, slavery and migration, and a forum for writers to reveal their insights into the writing of historical fiction. Julian Atterton, Berlie Doherty, Michael Foreman and Philip Pullman have made contributions. It provides evidence of children and students engaging creatively with historical fiction.

This is an indispensable reference work for anyone interested in the history of the United States Air Force and, particularly, in the role that key individuals have played in its evolution. Many of the individuals profiled in this book are well-known to students of air and space power. Most had notable combat careers. Others were organizers, men who shaped the service according to far-

seeing vision. They are a diverse bunch of over-achievers, many of whom were strongly opinionated, even about each other. But all of them were dedicated to an ideal: to produce a new form of military force, a force that would achieve victory in war by exploitation and dominance of the third dimension. In this, they were totally and uncompromisingly unified, a band of brothers who took this vision from the ground and brought it, with devastating force, to the skies of America's enemies.

In a relative sense compared to the several thousand years of evolution in ground and sea warfare, air power developed very rapidly. When Benny Foulois retired from his post as Chief of the Air Corps at the close of 1935, the B-17 Flying Fortress of World War II fame had completed its test flights and in January 1936, a contract for the first 13 Fortresses was signed by the Army. General Foulois died in 1967, just 6 decades after the Army's Aeronautical Division was formed. At the time of his death, the United States Air Force, which he had helped to create, was equipped with supersonic fighters, bombers with a range of 8,000 miles or more, intercontinental ballistic missiles, and thermonuclear weapons. But an air force is more than an agglomeration of aircraft, bombs, and bullets. It needs several other elements: a clear understanding of its purpose, or mission; a body of ideas (concepts and doctrine) governing in broad terms how it will carry out its mission; strategy and tactics for the efficient use of its equipment; a system for supplying its material and human needs; a research and development organization to keep ahead of potential enemies; experienced leaders; and sound organization to coordinate and direct its activities. These elements were lacking when the Army's only aviation unit first took to the field on March 15, 1916, commanded by Capt. Benny Foulois. The 1st Aero Squadron was ordered to help Brig. Gen. John J. Pershing scout out the bandit, Pancho Villa, and bring him back from Mexico, dead or alive. The squadron's unarmed, underpowered Curtiss JN-2 biplanes could not make it over the mountains or cope with the strong winds of northern Mexico. By April 20, only two of its eight planes were in commission.

In boyhood, Louis Zamperini was an incorrigible delinquent. As a teenager, he channeled his defiance into running, discovering a prodigious talent that had carried him to the Berlin Olympics. But when World War II began, the athlete became an airman, embarking on a journey that led to a doomed flight on a May afternoon in 1943. When his Army Air Forces bomber crashed into the Pacific Ocean, against all odds, Zamperini survived, adrift on a foundering life raft. Ahead of Zamperini lay thousands of miles of open ocean, leaping sharks, thirst and starvation, enemy aircraft, and, beyond, a trial even greater. Driven to the limits of endurance, Zamperini would answer desperation with ingenuity; suffering with hope, resolve, and humor; brutality with rebellion. His fate, whether triumph or tragedy, would be suspended on the fraying wire of his will. The uneasy balance between

these worlds is shattered when Starr witnesses the fatal shooting of her childhood best friend Khalil at the hands of a police officer. Khalil was unarmed. Soon afterward, his death is a national headline. Some are calling him a thug, maybe even a drug dealer and a gangbanger. Protesters are taking to the streets in Khalil's name. Some cops and the local drug lord try to intimidate Starr and her family. What everyone wants to know is: what really went down that night? And the only person alive who can answer that is Starr. She was a poor Southern tobacco farmer who worked the same land as her slave ancestors, yet her cells—taken without her knowledge—became one of the most important tools in medicine: The first “immortal” human cells grown in culture, which are still alive today, though she has been dead for more than sixty years. HeLa cells were vital for developing the polio vaccine; uncovered secrets of cancer, viruses, and the atom bomb's effects; helped lead to important advances like in vitro fertilization, cloning, and gene mapping; and have been bought and sold by the billions. Yet Henrietta Lacks remains virtually unknown, buried in an unmarked grave. Henrietta's family did not learn of her “immortality” until more than twenty years after her death, when scientists investigating HeLa began using her husband and children in research without informed consent. And though the cells had launched a multimillion-dollar industry that sells human biological materials, her family never saw any of the profits. As Rebecca Skloot so brilliantly shows, the story of the Lacks family—past and present—is inextricably connected to the dark history of experimentation on African Americans, the birth of bioethics, and the legal battles over whether we control the stuff we are made of. Over the decade it took to uncover this story,

Rebecca became enmeshed in the lives of the Lacks family—especially Henrietta's daughter Deborah. Deborah was consumed with questions: Had scientists cloned her mother? Had they killed her to harvest her cells? And if her mother was so important to medicine, why couldn't her children afford health insurance? Intimate in feeling, astonishing in scope, and impossible to put down, *The Immortal Life of Henrietta Lacks* captures the beauty and drama of scientific discovery, as well as its human consequences.

Chapter 16: HOMEWARD BOUND Excerpt from Author's Introduction "Before I tell the tale of my modern age

Odyssey, I suppose that I must introduce myself. My name is Jeff. I am an average American working stiff. I am not a scholar, or an archaeologist. I don't sit around a table, magnifying glass in hand, trying to decipher faded ancient texts. Nor do I drag ground penetrating radar devices behind me in an attempt to locate the lost tomb of Alexander the Great. No. I deliver mail for a living in a suburb of Detroit, Michigan. My interest in ancient Greece goes back to those now distant days when I was a typically nerdy high school student (now, I'm a typically nerdy mailman!). I had taken a tenth grade mythology class, and was introduced to Homer's Odyssey as required reading. There was something about that epic tale that enthralled me. Perhaps it was the characters that were so alive and Jeff Steele vibrant. Or perhaps it was the plot of the story that was so appealing; a man trying desperately to get home to his loving family, and having to overcome almost insurmountable obstacles to do so. Whatever it was that grabbed me about that book, I have been hooked on ancient Greece ever since. I vowed that one day I would travel to that distant and historic land. Of course, it would be awhile before I could make that dream come true. Life has an annoying habit of interfering with dreams. But the time had come to take the plunge. My house was paid off, I did not have a car payment, and I had no children to put through college. I had sort of put any thoughts of international travel on hold, until one night I watched the Nia Vardalis movie *My Life In Ruins*. After watching this incredibly funny film about a tour guide and her group of misfit tourists, I turned to my wife and said, "I'm going to do that. I'm going to go to Greece!" I wasn't getting any younger. Like many people my age, I sort of had a bucket list of things to do bouncing around inside my head. Once I had made the decision to travel to Greece, I then had to decide whom I would take with me. I knew that my wife would not go with me, due to her fear of flying. No amount of begging or pleading on my part would change her mind. Instead, I asked my good buddy John if he would be interested in joining me. Because he was unemployed, as many people are these days, I told him that I would pay for everything but his meals, his souvenirs, and his passport. But, I also offered to pay his way..."

The twenty-first century is lurching chaotically into a perilous and uncertain future. Once vibrant and creative, the University—now large, anachronistic, and bureaucratic—has all but exhausted its capabilities to respond to challenges and threats from within and without. Years of hypocrisy and power politics have taken their toll on the would-be "second Caltech." Now, everything is going wrong. A cynical attempt to fire a popular young teacher, Alistair Higham, explodes as students, parents, alumni, and the professors' professional organization come to the aid of the teacher. Investigation by the professional organization brings other injustices to light. It seems likely that the University will be censored and will lose its accreditation. The neighborhood around the University rises in protest over the latter's ham-handed attempt to have a block of lower-

middle-class houses razed to make room for a parking lot. Tight connections with industry make the University a partner in dumping toxic wastes in poor Mexican American neighborhoods and in mining in mountain wildernesses. Eventually, a crafty liaison with the oil industry comes to a head as the University is revealed to be an indirect participant in genocide in Quetzalgalpa, a remote and war-ravaged Central American country
