History Alive!: Ancient India TAN Books

A lively and engaging narrative history showing the common threads in the cultures that gave birth to our own. This is the first volume in a bold new series that tells the stories of all peoples, connecting historical events from Europe to the Middle East to the far coast of China, while still giving weight to the characteristics of each country. Susan Wise Bauer provides both sweeping scope and vivid attention to the individual lives that give flesh to abstract assertions about human history. Dozens of maps provide a clear geography of great events, while timelines give the reader an ongoing sense of the passage of years and cultural interconnection. This old-fashioned narrative history employs the methods of "history from beneath"—literature, epic traditions, private letters and accounts—to connect kings and leaders with the lives of those they ruled. The result is an engrossing tapestry of human behavior from which we may draw conclusions about the direction of world events and the causes behind them.

'An epic treasure hunt into the highways and byways of stored knowledge across faiths and continents.' John Agard, poet and playwright
In The Map of Knowledge Violet Moller traces the journey taken by the ideas of three of the greatest scientists of antiquity - Euclid, Galen and Ptolemy - through seven cities and over a thousand years. In it, we follow them from sixth-century Alexandria to ninth-century Baghdad, from Muslim Cordoba to Catholic Toledo, from Salerno's medieval medical school to Palermo, capital of Sicily's vibrant mix of cultures, and - finally - to Venice, where that great merchant city's printing presses would enable Euclid's geometry, Ptolemy's system of the stars and Galen's vast body of writings on medicine to spread even more widely. In tracing these fragile strands of knowledge from century to century, from east to west and north to south, Moller also reveals the web of connections between the Islamic world and Christendom, connections that would both preserve and transform astronomy, mathematics and medicine from the early Middle Ages to the Renaissance. Vividly told and with a dazzling cast of characters, The Map of Knowledge is an evocative, nuanced and vibrant account of our common intellectual heritage.

*Includes pictures. *Includes footnotes and a bibliography for further reading. Many ancient civilizations have influenced and inspired people in the 21st century. The Greeks and Romans continue to fascinate the West today. But of all the world's civilizations, none have intrigued people more than the Mayans, whose culture, astronomy, language, and mysterious disappearance all continue to captivate people. In 2012 especially, there was a renewed focus on the Mayans, whose advanced calendar has led many to speculate the world would end on the same date the Mayan calendar ends, but if anything, the focus on the "doomsday" scenario overshadowed the Mayans' true contribution to astronomy, language, sports, and art. The Maya maintained power in the Yucatan for over a thousand years, and at the height of its "Classical era" (3rd-9th centuries A.D.), the city of Tikal was one of the power centers of the empire. Archaeologists believe Tikal had been built as early as the 5th or 4th century BC, and eventually it became a political, economic and military capital that was an important part of a far-flung network across Mesoamerica, despite the fact it was seemingly conquered by Teotihuacan in the 4th century AD. It seems the foreign rulers came to assimilate Mayan culture, thus ensuring Tikal would continue to be a power base, and as a result, the city would not be abandoned until about the 10th century AD. As one of the Ancient Maya's most important sites, construction at Tikal was impressive, and even though it was apparently conquered, the city's records were unusually well preserved. This includes a list of the city's dynastic rulers, as well as the tombs and monuments dedicated to them. Thanks to this preservation, Tikal offers researchers their best look at the Ancient Maya and has gone a long way toward helping scholars understand Mayan history. Tikal: The History of the Ancient Maya's Famous Capital covers the history of the city, as well as the speculation and debate surrounding it. Along with pictures and a bibliography, you will learn about Tikal like you never have before, in no time at all.

The role of the Shanghai Cooperation Organization (SCO) in regional politics and the significance of the organization for U.S. interests are widely misunderstood. The organization is emphatically not a military bloc, and yet engages in joint activities which resemble military cooperation to U.S. eyes. It is, in theory, open to new members; but at present is highly unlikely to accept any. Its rhetoric firmly opposes U.S. presence and activity on the territory of member states, and yet individual member states leverage basing agreements with the U.S. to their advantage. The author reviews SCO's history and stated aspirations, and measures these against actual achievements. He concludes that, with the notable exception of the Regional Anti-Terrorist Structure(RATS), the great majority of SCO accomplishments are of little significance other than to provide an additional multinational vehicle through which China and in particular Russia can seek to counter U.S. and Western activity in Central Asia.

Hosts of the podcast *Stuff They Don't Want You to Know*, Ben Bowlin, Matthew Frederick, & Noel Brown discern conspiracy fact from fiction regarding "stuff" the government doesn't want you to know.

Conspiracies didn't always seem so clear and present. It used to be that people with tin-foil hats who were convinced of secret messages coming through the radio were easily disregarded as kooks and looney tunes. But these days, conspiracies feel alive and well. From internet rumors to lying politicians to the tinderbox that is social media, it's become remarkably clear that a vast swath of people believe really bonkers things. Why is that? How did these theories proliferate? Is there a kernel of truth to it or are they fully fiction? Ben Bowlin, Matt Frederick, and Noel Brown are the hosts of the popular iHeart podcast that seeks to answer these questions. With cool heads and extensive research, they regularly break down the wildest conspiracy theories: from chemtrails and biological testing to the secrets of lobbying and why the Kennedy assassination is of perennial interest. Written in smart, witty, and conversational style, and with amazing illustrations, *Stuff They Don't Want You to Know* is a vital book in helping to understand the unexplainable and use truth as a powerful weapon against ignorance, misinformation, and lies.
