Museums and Historical Artifacts Richard Di Giacomo

The San Francisco Bay Area is loaded with fascinating and unique historical sites that represent a broad range of historical events and eras. A resident of the Bay Area or a tourist in town for a few days can see a wide range of historical sites all within a day's drive of San Francisco. This book may also be useful for a teacher or parent who is looking for an educational field trip which ties in with the child's curriculum in a history, literature, or science class. Others may find it interesting to learn more about the Native Americans or pioneer settlers in a local community. So, whether you are just curious about what is inside that old historical house in your neighborhood, want to know how a specific historical event played out in your area, or are just looking for an interesting day trip, this book has something for you. Many people are familiar with the more famous sites in California. It is not uncommon to see tourists make a trip to see all of the California missions or Gold Rush towns, but there are also scores of lesser-known sites within the Bay Area that highlight a particular historical event or offer a comprehensive overview of the history of that town or region. More than just a tour guide, the book is broken into sections with essays that acquaint the reader with the history that is covered by the representative museums or sites. DiGiacomo goes beyond the traditional city, county, state, and national museums and historic sites that feature famous people, historic homes and events. He also covers museums devoted to agriculture, business, Hispanic California, immigration, military posts, mining, Native Americans, transportation, sports, as well as science and technology. He thoughtfully includes key information on each museum such as its location, web address, hours of operation, cost, and what a visitor can expect to encounter. Over 220 historical sites are listed.

This book is the first to describe the history of geoconservation. It draws on experience from the UK, Europe and further afield, to explore topics including: what is geoconservation; where, when and how did it start; who was responsible; and how has it differed across the world? Geological and geomorphological features, processes, sites and specimens, provide a resource of immense scientific and educational importance. They also form the foundation for the varied and spectacular landscapes that help define national and local identity as well as many of the great tourism destinations. Mankind's activities, including contributing to enhanced climate change, pose many threats to this resource: the importance of safeguarding and managing it for future generations is now widely accepted as part of sustainable development. Geoconservation is an established and growing activity across the world, with more participants and a greater profile than ever before. This volume highlights a history of challenges, set-backs, successes and visionary individuals and provides a sound basis for taking geoconservation into the future.

During the Hilary Term of 1987, the notable New Testament theologian on Luke, Joseph A. Fitzmyer, S.J., was invited to give the Martin D'Arcy Lectures at Campion Hall in the University of Oxford. These eight lectures delivered on Lucan themes have been revised and now appear in this book. 'Luke the Theologian: Aspects of His Teaching' is an excellent study of the major theological themes in Luke and is a further exploration of what Fr. Fitzmyer has presented in his Doubleday Commentary, 'The Gospel According to Luke' (Anchor Bible 28, 28A). The topics include a reconsideration of the authorship of Luke-Acts, problems of the infancy narrative, Mary in Lucan salvation history, John the Baptist as the precursor of the Lord, discipleship in Luke-Acts, Satan and demons in the Lucan writings, the Jewish people and Mosaic law in Lucan thinking, and Jesus' words to the repentant criminal. The Lucan writings form about a quarter of the New Testament and are a veritable mine for early Christian teaching. This superb book brings out some of that wealth.

Plants produce a vast number of bioactive compounds with different chemical scaffolds, which modulate a diverse range of molecular targets and are used as drugs for treating numerous diseases. Most present-day medicines are derived either from plant compounds or their derivatives, and plant compounds continue to offer limitless reserves for the discovery of new medicines. While different classes of plant compounds, like phenolics, flavonoids, saponins and alkaloids, and their potential pharmacological applications are currently being explored, their curative mechanisms are yet to be understood in detail. This book is divided into 2 volumes and offers detailed information on plant-derived bioactive compounds, including recent research findings. Volume 1, "Plant-derived Bioactives: Chemistry and Mode of Action" discusses the chemistry of highly valued plant bioactive compounds and their mode of actions at the molecular level. Volume 2, "Plant-derived Bioactives: Production, Properties and Therapeutic Applications" explores the sources, biosynthesis, production, biological properties and therapeutic applications of plant bioactives. Given their scope, these books are valuable resources for members of the scientific community wishing to further explore various medicinal plants and the therapeutic applications of their bioactive compounds. They appeal to scholars, teachers and scientists involved in plant product research, and facilitate the development of new drugs.
