Nursing History Review, Volume 20 Capstone

Teaching history well is not just a matter of knowing history—it is a set of skills that can be developed and honed through practice. In this theoretically informed but eminently practical volume, Mary Jo Festle examines the recent explosion of research on the teaching and learning of history. Illuminated by her own work, Festle applies the concept of "backward design" as an organizing framework to the history classroom. She provides concrete strategies for setting up an environment that is inclusive and welcoming but still challenging and engaging. Instructors will improve their own conceptual understandings of teaching and learning issues, as well as receive guidance on designing courses and implementing pedagogies consistent with what research tells us about how students learn. The book offers practical illustrations of assignments, goals, questions, grading rubrics, unit plans, and formats for peer observation that are adaptable for courses on any subject and of any size. Transforming History is a critical guide for higher and secondary education faculty—neophytes and longtime professionals alike—working to improve student learning.

America: History of Our Nation Adapted Interactive Reading and Notetaking Study Guide 2007c W. W. Norton & Company

Is your child getting lost in the system, becoming bored, losing his or her natural eagerness to learn? If so, it may be time to take charge of your child's education—by doing it yourself. The Well-Trained Mind will instruct you, step by step, on how to give your child an academically rigorous, comprehensive education from preschool through high school—one that will train him or her to read, to think, to understand, to be well-rounded and curious about learning. Veteran home educators Susan Wise Bauer and Jessie Wise outline the classical pattern of education called the trivium, which organizes learning around the maturing capacity of the child's mind and comprises three stages: the elementary school "grammar stage," when the building

blocks of information are absorbed through memorization and rules; the middle school “logic stage,” in which the student begins to think more analytically; and the high-school “rhetoric stage,” where the student learns to write and speak with force and originality. Using this theory as your model, you’ll be able to instruct your child—whether full-time or as a supplement to classroom education—in all levels of reading, writing, history, geography, mathematics, science, foreign languages, rhetoric, logic, art, and music, regardless of your own aptitude in those subjects. Thousands of parents and teachers have already used the detailed book lists and methods described in *The Well-Trained Mind* to create a truly superior education for the children in their care. This extensively revised fourth edition contains completely updated curricula and book lists, links to an entirely new set of online resources, new material on teaching children with learning challenges, cutting-edge math and sciences recommendations, answers to common questions about home education, and advice on practical matters such as standardized testing, working with your local school board, designing a high-school program, preparing transcripts, and applying to colleges. You do have control over what and how your child learns. *The Well-Trained Mind* will give you the tools you’ll need to teach your child with confidence and success.
