Bridging the gap between physics and astronomy textbooks, this book provides step-by-step physical and mathematical development of fundamental astrophysical processes underlying a wide range of phenomena in stellar, galactic, and extragalactic astronomy. The book has been written for upper-level undergraduates and beginning graduate students, and its strong pedagogy ensures solid mastery of each process and application. It contains over 150 tutorial figures, numerous examples of astronomical measurements, and 201 exercises. Topics covered include the Kepler–Newton problem, stellar structure, binary evolution, radiation processes, special relativity in astronomy, radio propagation in the interstellar medium, and gravitational lensing. Applications presented include Jeans length, Eddington luminosity, the cooling of the cosmic microwave background (CMB), the Sunyaev–Zeldovich effect, Doppler boosting in jets, and determinations of the Hubble constant. This text is a stepping stone to more specialized books and primary literature. Password-protected solutions to the exercises are available to instructors at www.cambridge.org/9780521846561.

Gems from Tozer Bradt Travel Guides
What can Human-Computer Interaction (HCI) learn from art? How can the HCI research agenda be advanced by looking at art research? How can we improve creativity support and the amplification of that important human capability? This book aims to answer these questions. Interactive art has become a common part of life as a result of the many ways in which the computer and the Internet have facilitated it. HCI is as important to interactive art as mixing the colours of paint are to painting. This book reviews recent work that looks at these issues through art research. In interactive digital art, the artist is concerned with how the artwork behaves, how the audience interacts with it, and, ultimately, how participants experience art as well as their degree of engagement. The values of art are deeply human and increasingly relevant to HCI as its focus moves from product design towards social benefits and the support of

human creativity. The book examines these issues and brings together a collection of research results from art practice that illuminates this significant new and expanding area. In particular, this work points towards a much-needed critical language that can be used to describe, compare and frame research in HCI support for creativity.

After water, coffee is the most widely consumed beverage in the world. It sits in the background of some of life's most important moments: hanging out with friends, that tentative first date, an exhilarating business meeting. Drift, a stunning magazine, is all about coffee, about capturing those moments. Drift Volume 9 takes a multi-faceted look at the coffee culture of Bali. Once a hideaway haunt for yogis and surfers, this tropical destination in the world's largest archipelago nation has become a hotspot for a wide range of visitors, from coffee purveyors to nomadic techies and itinerant bon vivants.

The Color Teil John Wiley & Sons
The Color Teil chronicles Teil Duncan's artistic journey, displaying over three hundred full-color images of her work. Her studies range from figure drawings and animals to beach and pool scenes. Inspiration comes in all sizes and shapes for Teil. She attributes her artistic talent and motivation largely to her Christian faith, which, while she lost touch with it during her young adult years, she now thrives within. Her walk with Jesus is Teil's top priority. Throughout this book, readers will become better acquainted with both the artist, as a person, and the art she creates. It is a vibrant, colorful journey that can only be described as: The Color Teil.

The use of interactive technology in the arts has changed the audience from viewer to participant and in doing so is transforming the nature of experience. From visual and sound art to performance and gaming, the boundaries of what is possible for creation, curating, production and distribution are continually extending. As a consequence, we need to reconsider the way in which these practices are evaluated. Interactive Experience in the Digital Age explores diverse ways of creating and evaluating interactive digital art through the eyes of the practitioners who are embedding evaluation in their creative process as a way of revealing and enhancing their practice. It draws on research methods from other disciplines such as interaction design, human-computer interaction and practice-based research more generally and adapts them to develop new strategies and techniques for how we reflect upon and assess value in the creation and experience of interactive art. With contributions from artists, scientists, curators, entrepreneurs and

designers engaged in the creative arts, this book is an invaluable resource for both researchers and practitioners, working in this emerging field.

In Mordin On Time, Nick Mordin sets out his method for answering the most fundamental question facing punters in any race, namely: which is the fastest horse? He was timing the sections of races with a stop watch, estimating wind strength and direction, adjusting for movements of running rails, using projected times and calculating average times years before the best-selling American books on speed rating were published. This new edition incorporates much new material, including standard times for all Irish racecourses (plus the major French ones). Mordin On Time enables the reader to construct their own speed ratings wherever they live.

The acclaimed author of TYRELL and KENDRA returns to PUSH to continue Tyrell's astonishing story. Tyrell's father is just out of jail, and Tyrell doesn't know how to deal with that. It's bad enough that his brother Troy is in foster care and that his mother is no help whatsoever. Now there's another thing up in his face, just when he's trying to settle down. Tyrell's father has plans of his own, and doesn't seem to care whether or not Tyrell wants to go along with them. Tyrell can see the crash that's coming -- with his dad, with the rest of his family, with the girls he's seeing -- but he's not sure he can stop it. Or if he even wants to.

In this unique book the author explores the history of pioneering computer art and its contribution to art history by way of examining Ernest Edmonds’ art from the late 1960s to the present day. Edmonds’ inventions of new concepts, tools and forms of art, along with his close involvement with the communities of computer artists, constructive artists and computer technologists, provides the context for discussion of the origins and implications of the relationship between art and technology. Drawing on interviews with Edmonds and primary research in archives of his work, the book offers a new contribution to the history of the development of digital art and places Edmonds’ work in the context of contemporary art history.
