What can Human-Computer Interaction (HCI) learn from art? How can the HCI

research agenda be advanced by looking at art research? How can we improve creativity support and the amplification of that important human capability? This book aims to answer these questions. Interactive art has become a common part of life as a result of the many ways in which the computer and the Internet have facilitated it. HCI is as important to interactive art as mixing the colours of paint are to painting. This book reviews recent work that looks at these issues through art research. In interactive digital art, the artist is concerned with how the artwork behaves, how the audience interacts with it, and, ultimately, how participants experience art as well as their degree of engagement. The values of art are deeply human and increasingly relevant to HCI as its focus moves from product design towards social benefits and the support of human creativity. The book examines these issues and brings together a collection of research results from art practice that illuminates this significant new and expanding area. In particular, this work points towards a much-needed critical language that can be used to describe, compare and frame research in HCI support for creativity.

Interacting gives a primary voice to practitioner researchers in the emerging academic discourse about creative practice and research, a voice which has been somewhat muted in debates about the nature of practitioner knowledge and the role of the artefact in knowledge creation. By creating and evaluating interactive artworks, the contributors challenge existing notions about the role of research in practice, and their accounts provide fascinating insights into the growing phenomenon of artworks shaped by the audiences who interact with them.

This new edition incorporates much new material, including standard times for all Irish racecourses (plus the major French ones).
