Handbook of Serial Communications Interfaces Newnes

The processes of manufacture and assembly are based on the communication of engineering information via drawing. These drawings follow rules laid down in national and international standards. The organisation responsible for the international rules is the International Standards Organisation (ISO). There are hundreds of ISO standards on engineering drawing because drawing is

very complicated and accurate transfer of information must be guaranteed. The information contained in an engineering drawing is a legal specification, which contractor and sub-contractor agree to in a binding contract. The ISO standards are designed to be independent of any one language and thus much symbology is used to overcome any reliance on any language. Companies can only operate efficiently if they can guarantee the correct transmission of

engineering design information for manufacturing and assembly. This book is a short introduction to the subject of engineering drawing for manufacture. It should be noted that standards are updated on a 5-year rolling programme and therefore students of engineering drawing need to be aware of the latest standards. This book is unique in that it introduces the subject of engineering drawing in the context of standards.

The present world is service oriented. Without a proper structure, no system can work, and services cannot be rendered successful.

Moreover, for the proper structure, the practice of design thinking is the perfect answer. Design thinking is not a newly emerged concept and remains rooted in society for a very long time. The concept of design thinking is useful for

designing and understanding context relating to any businesses. Design thinking may seem vague and a capable subject for all; however, the same is not true and requires thorough planning. If general reports are to be taken, design thinking has five stages, and each stage has its importance. Design thinking brings out the creativity of a person, and the scope of the same has widened in the modern day, where one encounters various problems even in day-to-day activities. Design thinking is a way to attain success and is an essential factor of development and growth.
