Architectural institutions are reviewing modes of learning and practice of architecture to reflect the changing professional landscape. Schools confront the ever-acute tensions between critical thinking and the market. The training of architects who will likely be working in different contexts requires new frames of reference and paradigms. What competencies should the practitioner of architecture possess to bridge technical and managerial specializations in light of competitiveness and nuances of culture? How do the practices and performances of the profession take into account the hybrids and collaborations that define the broad scope of projects? The dilemma of competency lies in the rigorous study of the conditions and processes of architecture, configuring and situating skills and capabilities.

Considered the industry-standard resource and updated as of March 1, 2014, the Audit Sampling Guide summarizes applicable requirements and practices, and delivers “how-to” advice to help auditors apply nonstatistical and statistical sampling. The guide includes case studies illustrating the use of different sampling methods, including classical variables sampling and monetary unit sampling, in real world situations. New in 2014, a detailed case study of the application of classical variables sampling with the use of software has been included as an appendix. The appendices also include sampling tables and similar tools, as well as other sampling considerations. Packed with information on sampling requirements and sampling methods, this Guide is an indispensable resource.
