The process of user-
centered innovation: how it
can benefit both users and
manufacturers and how its
emergence will bring
changes in business models
and in public policy.

Innovation is rapidly
becoming democratized.

Users, aided by
improvements in computer

and communications
technology, increasingly can
develop their own new
products and services.

These innovating
users—both individuals and
firms—often freely share
their innovations with
others, creating user-
innovation communities and
a rich intellectual commons.

In *Democratizing
Innovation*, Eric von Hippel
looks closely at this
emerging system of user-
centered innovation. He
explains why and when
users find it profitable to
develop new products and
services for themselves,
and why it often pays users

to reveal their innovations
freely for the use of all. The
trend toward democratized
innovation can be seen in
software and information
products—most notably in
the free and open-source
software movement—but
also in physical products.

Von Hippel's many
examples of user innovation
in action range from
surgical equipment to
surfboards to software
security features. He shows
that product and service
development is
concentrated among "lead
users," who are ahead on
marketplace trends and
whose innovations are often

commercially attractive. Von Hippel argues that manufacturers should redesign their innovation processes and that they should systematically seek out innovations developed by users. He points to businesses—the custom semiconductor industry is one example—that have learned to assist user-innovators by providing them with toolkits for developing new products. User innovation has a positive impact on social welfare, and von Hippel proposes that government policies, including R&D subsidies and tax credits,

eliminate biases against it. The goal of a democratized user-centered innovation system, says von Hippel, is well worth striving for. Georges Benko « Societies are much messier than our theories of them » Michael Mann The Sources of Social Power 1 Towards a unified social theory Why are there communication problems between the different disciplines of the social sciences? And why should there be so much misunderstanding? Most probably because the encounter of several disciplines is in fact the encounter of several different histories, and

therefore of several different cultures, each interpreting the other according to the code dictated by its own culture. Inevitably geographers view other disciplines through their own cultural filter, and even a benevolent view remains 'ethnocentric'. It was in order to avoid such ethnocentricity that Fernand Braudel called for more unity among the social sciences in 1958 : « I wish the social sciences . . . would stop discussing their respective differences so much . . . and instead look for common ground . . . on which to reach their first

agreement. Personally I would call these ways : quantification, spatial awareness and 'longue duree' » . In its place at the center of the social sciences, geography reduces all social reality to its spatial dimensions. Unfortunately, as a discipline, it considers itself all too often to be in a world of its own. There is a need in France for a figure like Vidal de la Blanche who could refocus attention away from issues of time and space, towards space and social reality. Geographic research will only take a step forward

once it learns to address the problems facing all the sciences.

Throughout the twentieth century, governments sought to achieve 'development' not only in their own countries, but also in other regions of the world; particularly in Africa, Asia, Latin America and the Caribbean. This focus on 'development' as a goal has continued into the twenty-first century, for

example through the United Nations Millennium Development Targets.

While development is often viewed as something very positive, it is also very important to consider the possible detrimental effects it may have on the natural environment, different social groups and on the cohesion and stability of societies. In this important book, Katie Willis investigates and places in a historical context, the development theories behind

contemporary debates such as globalization and transnationalism. The main definitions of 'development' and 'development theory' are outlined with a description and explanation of how approaches have changed over time. The differing explanations of inequalities in development, both spatially and socially, and the reasoning behind different development policies are also considered. By drawing

on pre-twentieth century European development theories and examining current policies in Europe and the USA, the book not only stresses commonalities in development theorizing over time and space, but also the importance of context in theory construction. This topical book provides an ideal introduction to development theories for students in geography, development studies, area studies, anthropology and sociology. It contains

student-friendly features, including boxed case studies with examples, definitions, summary sections, suggestions for further reading, discussion questions and website information. School, Family, and Community Partnerships John Wiley & Sons Easy-to-apply, scientifically-based approaches for engaging students in the classroom Cognitive scientist Dan Willingham focuses his acclaimed research on the biological and cognitive basis of learning. His book will help

teachers improve their practice by explaining how they and their students think and learn. It reveals the importance of story, emotion, memory, context, and routine in building knowledge and creating lasting learning experiences. Nine, easy-to-understand principles with clear applications for the classroom Includes surprising findings, such as that intelligence is malleable, and that you cannot develop "thinking skills" without facts How an understanding of the brain's workings can help teachers hone their teaching skills

"Mr. Willingham's answers apply just as well outside the classroom. Corporate trainers, marketers and, not least, parents -anyone who cares about how we learn- should find his book valuable reading." —Wall Street Journal

In every major city in the world there is a housing crisis. How did this happen and what can we do about it? Everyone needs and deserves housing. But today our homes are being transformed into commodities, making the inequalities of the city ever

more acute. Profit has become more important than social need. The poor are forced to pay more for worse housing. Communities are faced with the violence of displacement and gentrification. And the benefits of decent housing are only available for those who can afford it. In *Defense of Housing* is the definitive statement on this crisis from leading urban planner Peter Marcuse and sociologist David Madden. They look at the causes and consequences of the housing problem and detail the need for progressive alternatives. The housing

crisis cannot be solved by minor policy shifts, they argue. Rather, the housing crisis has deep political and economic roots—and therefore requires a radical response.

Adapt Houghton Mifflin Harcourt
Written for the elementary social studies methods course, this "interactive" program combines features of a textbook and a workbook, with thorough integration between the print text and a dynamic web site. Increasingly, majors in elementary education (if not the

population at large) are more attuned to reading interactive material with relatively brief narrative, bulleted items, text boxes, and targeted messages (like web pages) rather than traditional, denser text. To accommodate these preferences, the layout of the print text features a larger-than-usual font, an 8 x 11" trim size, and spiral binding, and the content includes an abundance of bulleted lists, shaded text boxes, and contemporary graphics. The program's interactive approach and flexibility allow the professor to model the

kinds of teaching principles and practices that students will want to use in their own elementary school classrooms. These principles and practices are integrated throughout the text and include a focus on active-learning strategies, application of constructivist principles, focus on Big Ideas and thinking skills, use of the Internet, and modeling of Best Practices and Performance-based assessments (based on INTASC and NCATE standard). Thus, the book will serve as a springboard for classroom activities, web site explorations,

and/or instructor-led activities.

Designed with New York State high school students in mind. CliffsTestPrep is the only hands-on workbook that lets you study, review, and answer practice Regents exam questions on the topics you're learning as you go. Concise answer explanations immediately follow

each question--so everything you need is right there at your fingertips. After going through the practice questions, you can use the workbook again as a refresher to prepare for the Regents exam by taking a full-length practice test. You'll get comfortable with the structure of the actual exam while also pinpointing areas where you need further review. About the contents: Inside this

workbook, you'll find sequential, topic-specific test questions with fully explained answers for each of the following subjects: World History Geography Economics Civics, Citizenship, and Government A full-length practice test at the end of the book is made up of questions culled from multiple past Regents exams. Use it to identify your weaknesses, and then go back to those

sections for more study. It's that easy! The only review-as-you-go workbook for the New York State Regents exam.

It's Complicated Strengthen programs of family and community engagement to promote equity and increase student success! When schools, families, and communities collaborate and share responsibility for students education, more students succeed in school. Based on 30 years of research and

fieldwork, the fourth edition of the bestseller *School, Family, and Community Partnerships: Your Handbook for Action*, presents tools and guidelines to help develop more effective and more equitable programs of family and community engagement. Written by a team of well-known experts, it provides a theory and framework of six types of involvement for action; up-to-date research on school, family, and community collaboration; and new

materials for professional development and on-going technical assistance. Readers also will find: Examples of best practices on the six types of involvement from preschools, and elementary, middle, and high schools Checklists, templates, and evaluations to plan goal-linked partnership programs and assess progress CD-ROM with slides and notes for two presentations: A new awareness session to orient colleagues on the

major components of a research-based partnership program, and a full One-Day Team Training Workshop to prepare school teams to develop their partnership programs. As a foundational text, this handbook demonstrates a proven approach to implement and sustain inclusive, goal-linked programs of partnership. It shows how a good partnership program is an essential component of good school organization and school improvement

for student success. This book will help every district and all schools strengthen and continually improve their programs of family and community engagement.

Houghton Mifflin Social Studies

Humanistic geography now has an established position in the intellectual development of contemporary geography. However there has so far been little attempt to draw together the humanistic approach in one broad statement. This book by the leading figures in the

field provides a platform for the exposition of humanistic geography in all its aspects.
