In this volume, language learning and professionalization are explored by addressing the existing gap between pressing needs for enhanced soft skills in work environments wherein technology-mediated, multilingual communication is increasingly the norm, and current foreign language teaching and learning offerings in higher education. Considering theoretical, methodological, and pedagogical perspectives for preparing language learners and teachers in/for the 21st century, this volume's eight chapters underscore that research findings should inform the design of learning experiences so that people's communication needs in fast-changing work environments are met and the link between language education and professionalization, within a lifelong learning perspective, is sustained.

[How Babies Talk](#) National Academies Press

Decades of research have demonstrated that the parent-child dyad and the environment of the family—which includes all primary caregivers—are at the foundation of children's well-being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. Parenting Matters identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in

effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.

This book brings together experts from diverse scientific disciplines who share an interest in the topic of father involvement. Unlike most books in the field, which tend to solely draw from a psychological perspective, this Handbook merges theories and research from the unique fields of psychology, economics, demography sociology, anthropology, and social policy. For the most part, research on fathering is motivated by concern for children's well-being. Social scientists share a core set of questions, including: "Who are fathers?" "What is father involvement and how does it affect children and families?" "What are the determinants of father involvement?" "How do cultural contexts shape fathers' roles in families?" This Handbook sheds light on how a cross-disciplinary approach to the study of fathering can advance knowledge about these fundamental questions. This integrative approach is fundamental to a comprehensive understanding of human development generally, and to fathering more specifically. At the core of this book are the goals of describing and understanding the nature, antecedents, and consequences of father involvement across biological status, family structure, culture, and stages in children's development—both within and across scientific boundaries. Each of the scientific disciplines represented offers unique methodological and theoretical approaches to the study of fathering and to the interpretation of behavioral patterns that characterize ecological systems that include—as well as extend beyond—family units. Together, the chapters offer provocative and challenging insight into the nature and meaning of fatherhood and father involvement by questioning longstanding assumptions about fathers' roles in the lives of families and children in current history.

First released in the Spring of 1999, *How People Learn* has been expanded to show how the theories and insights from the original book can translate into actions and practice, now making a real connection between classroom activities and learning behavior. This edition includes far-reaching suggestions for research that could increase the impact that classroom teaching has on actual learning. Like the original edition, this book offers exciting new research about the mind and the brain that provides answers to a number of compelling questions. When do infants begin to learn? How do experts learn and how is this different from non-experts? What can teachers and schools do—with curricula, classroom settings, and teaching methods—to help children learn most effectively? New evidence from many branches of science has significantly added to our understanding of what it means to know, from the neural processes that occur during learning to the influence of culture on what people see and absorb. *How People Learn* examines these findings and their implications for what we teach, how we teach it, and how we assess what our children learn. The book uses exemplary teaching to illustrate how approaches based on what we now know result in in-depth learning. This new knowledge calls into question concepts and practices firmly entrenched in our current education system. Topics include: How learning actually changes the physical structure of the brain. How existing knowledge affects what people notice and how they learn. What the thought processes of experts tell us about how to teach. The amazing learning potential of infants. The relationship of classroom learning and everyday settings of community and workplace. Learning needs and opportunities for teachers. A realistic look at the role of technology in education.

Educating dual language learners (DLLs) and English learners (ELs) effectively is a national challenge with consequences both for individuals and for American society. Despite their linguistic, cognitive, and social potential, many ELs—who account for more than 9 percent of enrollment in grades K-12 in U.S. schools—are struggling to meet the requirements for academic success, and their prospects for success in postsecondary education and in the workforce are jeopardized as a result. Promoting the Educational Success of Children and Youth Learning English: Promising Futures examines how evidence based on research relevant to the development of DLLs/ELs from birth to age 21 can inform education and health policies and related practices that can result in better educational outcomes. This report makes recommendations for policy, practice, and research and data collection focused on addressing the challenges in caring for and educating DLLs/ELs from birth to grade 12.

The Magic and Mystery of Language in the First Three Years of Life John Benjamins Publishing Company

Socioeconomic Status, Parenting, and Child Development presents cutting-edge thinking and research on linkages among socioeconomic status, parenting, and child development. The contributors represent an array of different disciplines, and approach the issues from a variety of perspectives. Accordingly, their "take" on how SES matters in the lives of children varies. This volume is divided into two parts. Part I concerns the constructs and measurement of SES and Part II discusses the functions and effects of SES. Each part presents four substantive chapters on the topic followed by an interpretive and constructively critical commentary. The chapters—considered as a whole—attest to the value of systematically examining the components of SES and how each flows through an array of specific parenting practices and resources both within and outside the home environment to help shape the course of child development. The result is a more fully delineated picture of how SES impacts the lives of children in the 21st century—a picture that contains a road map for the next generation of studies of SES and its role in the rapidly evolving ecology of family life.
